

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS,
CANBERRA.

OFFICIAL

YEAR BOOK

OF THE

COMMONWEALTH OF AUSTRALIA

No. 46—1960.

Prepared under Instructions from
The Right Honorable the Treasurer.

BY

S. R. CARVER,
COMMONWEALTH STATISTICIAN.

By AUTHORITY:

A. J. ARTHUR, COMMONWEALTH GOVERNMENT PRINTER, CANBERRA.

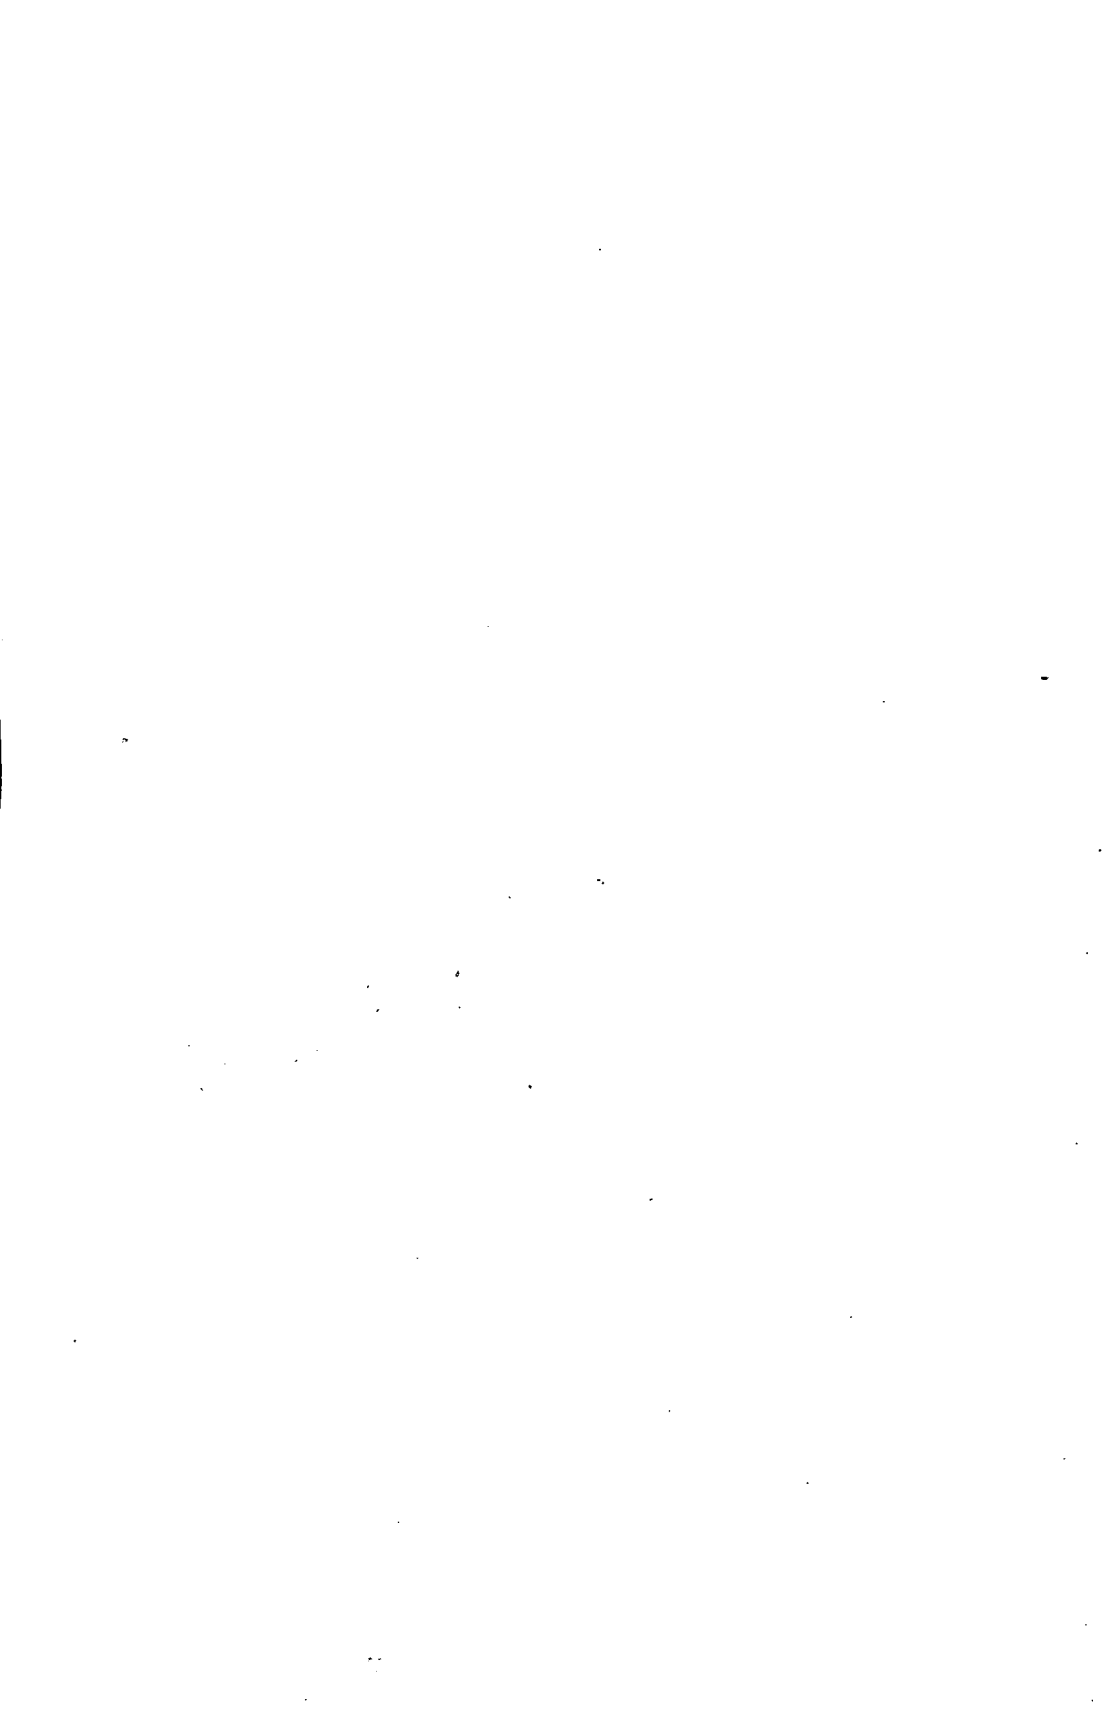

(Wholly set up and printed in Australia.)

OFFICIAL YEAR BOOK
OF THE
COMMONWEALTH OF AUSTRALIA.

PREFACE.

By the Constitution of the Commonwealth of Australia, the Parliament of the Commonwealth is empowered, subject to the Constitution, "to make laws for the peace, order, and good government of the Commonwealth, with respect to Census and statistics." In the exercise of the power so conferred, a "Census and Statistics Act" was passed in 1905, and in the year following the "Commonwealth Bureau of Census and Statistics" was created. The first Official Year Book was published early in 1908. The publication here presented is the forty-sixth Official Year Book issued under the authority of the Commonwealth Government.

The Synopsis on pp. xi to xxxi following shows the general arrangement of the work. The special index (preceding the General Index) provided at the end of the volume, together with certain references given in the various chapters, will assist in tracing in previous issues special articles and other more or less important miscellaneous matter which, owing to limitations of space, have been omitted or abbreviated in the present volume. Where, in the General Index, more than one reference to a subject is given, the chief reference (or references) has been specially indicated wherever possible.

Every endeavour has been made to meet the demand occasioned by the current economic and financial conditions for new information, or information expressed in new terms, concerning many branches of statistics, while a Diary of Principal Economic Events of the years 1956 to 1959 is inserted after the last chapter.

It is not proposed to refer to the whole of the new matter or to the new treatment of existing matter incorporated in the present volume, but attention may be drawn to the following:—

- Chapter V.—The Territories of Australia.—New Map showing location of Territories (p. 109).
- Chapter XII.—Labour, Wages, and Prices.—Revised and enlarged section dealing with Wage Margins, including 1959 cases (p. 446).
- Chapter XV.—Education.—Graph showing Students Enrolled and Teachers Employed (p. 593).
- Chapter XVI.—Public Justice.—New section dealing with Children's Courts (p. 633); revised section dealing with Divorce, etc. (p. 638).
- Chapter XX.—Private Finance.—Revised section dealing with Banking, setting out information on re-organization of Commonwealth Banks (pp. 763 *et seq.*).—New section dealing with Short Term Money Market (p. 805).
- Chapter XXIV.—Farmyard, Dairy, and Bee Products.—Revision of section dealing with Dairy Cattle and Dairy Products.
- Chapters XXV.—Forestry, XXVI.—Fisheries and XXVII.—Mineral Industry (pp. 1005, 1019, and 1037).—General revisions of order and presentation of data.
- Chapter XXX.—Miscellaneous.—Special article on Mount Stromlo Observatory (p. 1142).
- Appendix.—Basic Wage Inquiry, 1960.—Précis of judgment (p. 1220).
- Consumer Price Index—New Section (p. 1218).

The material in the Year Book has been carefully checked throughout, but I shall be grateful to those who will be kind enough to point out defects or make suggestions.

In a publication of this size, a considerable time must necessarily elapse between the handling, both by author and printer, of the earlier and later parts of the work. In order to offset, to some extent, the consequent delay in presentation, the contents of this issue have already been published in separate parts as the successive chapters or groups of chapters were printed. Particulars of these parts, numbering eleven in all, are shown in the Price List of Printed Publications at the end of this volume. In a statistical publication, however, the time element does result in an unevenness in the periods to which the statistics relate. To overcome this difficulty, in part at least, an Appendix is provided in which, so far as space permits, later particulars, where available, of many statistical series appearing in preceding chapters have been inserted. The insertions have been restricted mainly to figures, as the inclusion of current textual matter is not generally practicable.

In a number of chapters, the figures in this issue have been brought forward two years from those in the previous issue. The Appendix to this issue contains information for various periods up to 1959-60.

It should be pointed out that for the most recent statistics the reader should refer to other publications issued by this Bureau, notably the *Monthly Review of Business Statistics* and the *Quarterly Summary of Australian Statistics*. There are also numerous mimeographed statements issued from time to time on a wide range of subjects. Particulars of these are shown in Chapter XXXI.—Statistical Organization and Sources of Information.

My thanks are tendered to the Statisticians in each State, who have collected and compiled the data on which a great part of the information given in the *Official Year Book* is based. Thanks are also tendered to the responsible officers of the various Commonwealth and State Departments, and to others who have kindly, and often at considerable trouble, supplied information.

I also desire to express my keen appreciation of the valuable work performed by Mr. A. E. Callander, Editor of Publications, Mr. E. H. Harry, B.A., B.Com., and Mr. S. Burton, B.A., Assistant Editors, and the other officers of the Publications Division, and of the services rendered by the officers in charge of the several Branches of the Commonwealth Bureau of Census and Statistics upon whom has devolved the duty of revising the chapters relative to their respective Branches.

S. R. CARVER,
Commonwealth Statistician.

SYNOPSIS.

CHAPTER I.—DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA.

	PAGE		PAGE.
§ 1. Early Knowledge and Discovery of Australia—		§ 5. The Establishment of the Commonwealth of Australia—	
1. Introduction	1	1. General	5
2. Terra Australis	1	2. Transfer of the Northern Territory to the Commonwealth ..	5
3. Discovery of Australia ..	1	3. Transfer of the Australian Capital Territory to the Commonwealth ..	5
4. Discoveries by the English ..	2	4. Present Composition of the Commonwealth	5
§ 2. The Annexation of Australia—		§ 6. The Constitutions of the States and of the Commonwealth—	
1. Annexation of the Eastern Part of Australia, 1770	2	1. General	6
2. Original Extent of New South Wales ..	3	2. Commonwealth Constitution Act ..	6
3. Extension of New South Wales Westward, 1825	3	§ 7. The External Territories of Australia—	
4. Annexation of Western Australia, 1827	3	1. Transfer of Norfolk Island ..	23
§ 3. The Exploration of Australia	3	2. Transfer of British New Guinea or Papua	23
§ 4. The Creation of the Several Colonies—		3. Territory of New Guinea	23
1. New South Wales	4	4. Nauru	24
2. Tasmania	4	5. Territory of Ashmore and Cartier Islands	24
3. Western Australia	4	6. Australian Antarctic Territory ..	24
4. South Australia	4	7. Territory of Heard and McDonald Islands	24
5. New Zealand	4	8. Territory of Cocos (Keeling) Islands ..	24
6. Victoria	4	9. Territory of Christmas Island ..	24
7. Queensland	4		

CHAPTER II.—PHYSIOGRAPHY.

§ 1. General Description of Australia—		§ 2. Climate and Meteorology of Australia—	
1. Geographical Position	25	<i>continued.</i>	
2. Area of Australia compared with Areas of other Countries ..	25	4. Evaporation	45
3. Areas of States and Territories, Coastal Configuration and Standard Times	27	5. Rainfall	45
4. Geographical Features of Australia ..	27	6. Remarkable Falls of Rain	49
5. Fauna, Flora, Geology and Seismology of Australia	29	7. Snowfall	50
§ 2. Climate and Meteorology of Australia—		8. Hail	50
1. Introductory	29	9. Droughts	51
2. Temperature	29	10. Barometric Pressures	51
3. Humidity	32	11. Wind	51
		12. Influences affecting Australian Climate	52
		13. Rainfall and Temperatures, Various Cities	52
		14. Climatological Tables	52

CHAPTER III.—GENERAL GOVERNMENT.

§ 1. Scheme of Parliamentary Government—		§ 2. Parliaments and Elections— <i>continued.</i>	
1. General	61	8. The Parliament of Tasmania ..	72
2. The Sovereign	61	9. Superannuation Funds of the Parliament of the Commonwealth and of the Australian States ..	72
3. Powers and Functions of the Governor-General and of the State Governors	62	§ 3. Administration and Legislation—	
4. The Cabinet and Executive Government	63	1. The Commonwealth Parliaments ..	73
5. Number and Salary of Members of the Legislatures, Australian Parliaments	64	2. Governors-General and Commonwealth Ministries	73
6. Commonwealth Parliamentary Allowances	65	3. Governors and State Ministers ..	76
7. Enactments of the Parliaments ..	65	4. Leaders of the Opposition, Commonwealth and State Parliaments ..	78
§ 2. Parliaments and Elections—		5. The Course of Legislation	78
1. Commonwealth	65	6. Legislation during 1958	78
2. State Elections	68	§ 4. Commonwealth Government Departments ..	86
3. The Parliament of New South Wales ..	69	§ 5. Cost of Parliamentary Government ..	86
4. " " " Victoria	70	§ 6. Government Employees	88
5. " " " Queensland	70		
6. " " " South Australia ..	71		
7. " " " Western Australia ..	71		

CHAPTER IV.—LAND TENURE AND SETTLEMENT.

	PAGE		PAGE
§ 1. Introduction	89	§ 7. Closer Settlement—	
§ 2. Free Grants and Reservations—		1. General	96
1-7. States and Northern Territory ..	89-91	2-7. States	96
8. Summary	91	§ 8. Settlement of Returned Service Personnel:	
§ 3. Unconditional Purchases of Freehold—		1. War Service Land Settlement	
1-6. States	91-92	Scheme	96
§ 4. Conditional Purchases of Freehold—		2. Loans and Allowances (Agricultural

2-7. States	92-93	3. War Service Land Settlement Divi-	
§ 5. Leases and Licences under Land Acts—		sion—Total Expenditure	99
1. General	93	§ 9. Advances to Settlers—	
2-9. States and Territories	93-94	1. General	99
10. Summary	94	2-8. States and Northern Territory ..	100-102
§ 6. Leases and Licences under Mining Acts—		9. Summary of Advances	102
1. General	94	§ 10. Alienation and Occupation of Crown Lands—	
2-8. States and Northern Territory ..	94-95	1. General	103
9. Summary	95	2-9. States and Territories	103-106
		10. Summary	106

CHAPTER V.—THE TERRITORIES OF AUSTRALIA.

THE NORTHERN TERRITORY.

§ 1. Area and Population—	
1. Area	107
2. Population	107
§ 2. Legislation and Administration ..	107
§ 3. Physiography—	
1. Tropical Nature of the Country ..	108
2. Contour and Physical Characteristics ..	108
§ 4. Climate, Fauna and Flora—	
1. The Seasons	108
2. Fauna	108
3. Flora	108
§ 5. Production—	
1. Agriculture	108
2. Pastoral Industry	111
3. Hides and Skins	112
4. Mining	112
5. Pearl Fisheries	112
§ 6. Land Tenure—	
1. General	112
2. Pastoral, Agricultural, etc., Leases ..	113
3. Mining Leases, etc.	113
§ 7. Trade, Transport and Communication—	
1. Trade	114
2. Shipping	114
3. Air Services	114
4. Railways	114
5. Roads	114
6. Posts, Telegraphs, Telephones and Wireless	114
§ 8. Education—	
1. European	115
2. Special Aboriginal Schools	115
3. Theoretical Training of Apprentices	116

THE NORTHERN TERRITORY—continued.

§ 9. Native Welfare	116
§ 10. Finance	116

THE AUSTRALIAN CAPITAL TERRITORY.

1. Introductory	118
2. Progress of Work	118
3. Forestry	119
4. Lands	120
5. Transport and Communication ..	120
6. Population	121
7. Production	121
8. Education	121
9. Finance	122

NORFOLK ISLAND.

1. Area, Location, etc.	125

CHAPTER VI.—MANUFACTURING INDUSTRY.

§ 1. General—		§ 4. Power Equipment in Factories—	
1. Introduction	149	1. General	157
2. Decentralization of Manufacturing Industries	149	2. Rated Horse-power of Engines in Factories other than Central Electric Stations	157
3. Commonwealth Division of Industrial Development	150	3. Rated Horse-power of Engines and Electric Motors Ordinarily in Use	157
4. Customs and Excise Tariffs and Bounties on Manufactures	150	4. Capacity of Engines and Generators installed in Central Electric Stations	159
5. Scientific Research and Standardization	150		
6. Definitions in Factory Statistics	150	§ 5. Employment in Factories—	
7. Classification of Factories	151	1. Number Employed	159
8. Factory Development since 1901—Australia	153	2. Rates of Increase	161
§ 2. Number of Factories—		3. Persons Employed in Classes of Industry	161
1. Number of Factories in each State	154	4. Persons Employed According to Occupational Grouping	162
2. Number of Factories in Industrial Classes	154	5. Monthly Employment	163
§ 3. Classification of Factories according to Number of Persons Employed—		6. Distribution of Employees According to Age	165
1. General	155		
2. States	155		
3. Australia	156		

CHAPTER VI.—MANUFACTURING INDUSTRY—*continued.*

	PAGE		PAGE
§ 6. Sex Distribution in Factories—		§ 8. Value of Production, Materials Used, Salaries and Wages— <i>continued.</i>	
1. Average Number of Males and Females Employed ..	166	6. Value of Production ..	175
2. Rate of Variation for each Sex ..	166	§ 9. Value of Land, Buildings, Plant and Machinery—	
3. Masculinity of Persons Employed in Factories ..	167	1. General ..	177
4. Employment of Females in Particular Industries ..	167	2. Value of Land and Buildings ..	178
§ 7. Child Labour in Factories—		3. Value of Plant and Machinery ..	179
1. Conditions of Child Labour ..	168	4. Depreciation of Land and Buildings and Plant and Machinery ..	180
2. Number of Children Employed ..	168	5. Land and Buildings, Plant and Machinery—Values, Additions and Replacements, Depreciation ..	181
3. Industries Employing Child Labour ..	169	§ 10. Principal Factory Products ..	182
4. Apprenticeship ..	169	§ 11. Individual Industries—	
§ 8. Value of Production, Materials Used, Salaries and Wages—		1. General ..	186
1. General ..	169	2-40. Industries ..	186-213
2. Salaries and Wages Paid ..	170		
3. Power, Fuel and Light Used ..	172

§ 4. Queensland—		4. Irrigation	282
1. General	268	§ 9. Papua and New Guinea—	
2. Great Artesian Basin	269	1. Rainfall	282
3. Other Basins	270	2. General	282
4. Stock Route Watering	270		

CHAPTER IX.—POPULATION.

§ 1. Population Statistics	283	§ 7. General Characteristics—	
§ 2. The Census—		1. Sex Distribution	305
1. Census-taking	284	2. Age Distribution	306
2. Population recorded at Censuses	284	3. Conjugal Condition	307
3. Increase since 1881 Census	284	4. Birthplace	308
§ 3. Growth and Distribution of Population—		5. Period of Residence in Australia	309
1. Growth of Population	285	6. Nationality	309
2. Present Numbers	286	7. Religion	310
3. Proportion of Area and Population, Density and Masculinity	286	8. Industry	311
4. Urban and Rural Distribution	287	9. Occupational Status	313
5. Capital Cities: Australia and Other Countries	289	10. Race	313
6. Principal Urban Areas	290	11. Other General Characteristics	314
7. Urban Areas Outside Metropolitan Areas	291	§ 8. Oversea Migration—	
8. Principal Cities in the World	292	1. Oversea Migration during the Present Century	315
§ 4. Mean Population—		2. Classification of Arrivals and Departures	316
1. General	292	3. Extent of Journey	317
2. Method of Calculation	292	4. Nationality	317
3. Results	293	5. Age Distribution and Conjugal Condition	318
§ 5. Elements of Increase—		6. Occupation	318
1. Natural Increase	293	§ 9. Assisted Migration into Australia—	
2. Recorded Net Interstate and Oversea Migration	296	1. Joint Commonwealth and States Scheme	318
3. Total Increase	297	2. United Kingdom Free and Assisted Passage Agreements, March, 1946	318
4. Rate of Population Growth	298	3. Child Migration from the United Kingdom	320
§ 6. Density—		4. Assisted Passage Scheme, Eire	320
1. General	303	5. Maltese Migration	320
2. Main Countries of the World	304	6. Empire and Allied Ex-Servicemen's Scheme	320

CHAPTER IX.—POPULATION—*continued.*

	PAGE		PAGE
§ 9. Assisted Migration into Australia— <i>continued.</i>		§ 10. The Regulation of Immigration into Australia—	
7. Displaced Persons Scheme	321	1. Powers and Legislation of the Commonwealth	324

CHAPTER X.—VITAL STATISTICS.

§ 1. Provisions for Registration and Compilation of Statistics	329	§ 4. Fertility and Reproduction— <i>continued.</i>	
§ 2. Marriages—		10. Masculinity of Live Births	343
1. Number of Marriages	330	11. Ex-nuptial Live Births	343
2. Crude Marriage Rates	330	12. Legitimations	344
3. Marriage Rates based on Marriageable Population	330	13. Multiple Births	344
4. Crude Marriage Rates of Various Countries	331	14. Ages of Parents	345
5. Age and Conjugal Condition at Marriage	331	15. Birthplaces of Parents	345
6. Previous Conjugal Condition	333	16. Occupation of Fathers	345
7. Birthplace of Persons Marrying	333	17. Age, Duration of Marriage and Issue of Mothers	345
8. Occupation of Bridegrooms	333	18. Nuptial First Births	347
9. Celebration of Marriages	333	19. Stillbirths	348
§ 3. Divorce	334	§ 5. Mortality—	
§ 4. Fertility and Reproduction—		1. Number of Deaths	349
1. Introduction	334	2. Crude Death Rates	350
2. Number of Live Births and Confinements	334	3. Standardized Death Rates	351
3. Crude Birth Rates	339	4. True Death Rates	351
4. Crude Birth Rates, Various Countries	340	5. Crude Death Rates, Various Countries	352
5. Fertility Rates	340	6. True Death Rates, Various Countries	352
6. Age-specific Fertility Rates for Females	341	7. Australian Life Tables	353
7. Gross and Net Reproduction Rates for Females	341	8. Infant Deaths and Death Rates	356
8. Gross and Net Reproduction Rates, Various Countries	342	9. Age Distribution	360
9. Fertility of Marriages	343	10. Causes of Death	362
		11. Deaths from Principal Causes	367
		12. Age at Death and Average Issue of Deceased Married Males and Females	371
		13. Age at Marriage of Deceased Males and Females, and Issue	372
		§ 6. Vital Statistics of External Territories	372

CHAPTER XI.—HOUSING AND OTHER NEW BUILDING.

§ 1. Introduction—		§ 3. Government Assistance to Housing since 1945— <i>continued.</i>	
1. General	373	2. Imported Houses	392
§ 2. Census Dwellings—		3. Housing Schemes in Commonwealth Territories	392
1. General	373	4. Other Housing Schemes in the States	393
2. Number of Dwellings	373	5. War Service Homes	395
3. Class of Dwelling	375	6. Other Forms of Government Assistance	396
4. Population According to Class of Dwelling, etc.	376	§ 4. Statistical Summary—New Building—	
5. Occupied Private Dwellings	377	1. General	396
§ 3. Government Assistance to Housing Since 1945—		2. New Houses	397
1. Agreements between the Commonwealth and State Governments	389	3. New Flats	399
		4. Value of New Buildings	400
		5. Persons engaged in New Building	401

CHAPTER XII.—LABOUR, WAGES AND PRICES.

	PAGE		PAGE
A. RETAIL PRICES AND PRICE INDEXES.		D. WAGES.	
§ 1. General	403	§ 1. Arbitration and Wages Boards Acts and Associated Legislation—	
§ 2. Previous Retail Price Indexes—		1. General	416
1. General	403	2. Commonwealth	416
2. The "Court" Index	403	3. States	418
§ 3. The Interim Retail Price Index (1952-53 Base Year)—		§ 2. Rate of Wage and Hours of Work—	
1. Origin of the Interim Retail Price Index (1952-53 Base Year)	404	1. General	418
2. Definition of the Interim Retail Price Index	405	2. Weekly Wage Rates	419
3. Differences between the Structure of the Interim Retail Price Index and that of the "C" Series Retail Price Index	405	3. Hourly Wage Rates	423
4. Comparison of Trends, etc.	406	4. Weekly Hours of Work	424
5. Compilation of Indexes including and excluding Price Movement of Potatoes and Onions	407	5. "Real" Wage Rates	425
§ 4. Tabular Statements of Retail Price Index Numbers—		§ 3. Average Weekly Wage Earnings—	
1. General	407	1. Average Weekly Total Wages Paid, and Average Earnings, All Industries	426
2. The "C" Series Retail Price Index	407	2. Average Weekly Wage Earnings Index Numbers	426
3. The Interim Retail Price Index	407	§ 4. Basic Wages in Australia—	
§ 5. The "C" Series Retail Price Index: 1914-1959—		1. General	427
1. Construction	410	2. The Commonwealth Basic Wage	428
2. Significant Dates	410	3. Australian Territories	440
3. "C" Series Retail Price Index, Six Capital Cities, 1914 to 1959	411	4. Basic Wage Rates for Females	440
§ 6. International Comparisons	412	5. State Basic Wages	440
B. WHOLESALE PRICES AND PRICE INDEXES.		§ 5. Wage Margins—	
§ 1. General	412	1. General	446
§ 2. Wholesale Price (Basic Materials and Foodstuffs) Index—		2. Metal Trades Case, 1954	446
1. Price Quotations	413	3. Margins Cases, 1959	446
2. Commodities and Grouping	413	E. EMPLOYMENT AND UNEMPLOYMENT.	
3. Method of Construction	413	§ 1. Employment—	
4. Index Numbers	413	1. Total Occupied Persons	450
§ 3. Melbourne Wholesale Price Index—		2. Wage and Salary Earners in Civilian Employment	452
1. General	414	3. Government Employees	455
2. Index Numbers	415	§ 2. Unemployment	456
C. CONTROL OF PRICES DURING AND SINCE THE 1939-45 WAR.		§ 3. Commonwealth Employment Service	457
1. General	415	§ 4. Industrial Disputes—	
2. Transfer of Price Control to the States	415	1. General	459
3. Price Stabilization	415	2. Industrial Groups	459
		3. States and Territories	459
		4. Duration	460
		5. Causes	461
		6. Results	462
		7. Methods of Settlement	463
		F. WORKERS' COMPENSATION LEGISLATION	463
		G. LABOUR ORGANIZATIONS.	
		§ 1. Labour Organizations in Australia—	
		1. Registration	464
		2. Particulars regarding Trade Unions	464
		3. Central Labour Organizations	466
		§ 2. International Labour Organization	467

CHAPTER XIII.—TRADE.

1. General ..	660	4. Red Cross Blood Transfusion Service ..	677
2. National Health Benefits—		5. Lady Gowrie Child Centres ..	678
1. Pharmaceutical Benefits ..	660	C. INSTITUTIONS.	
2. Hospital Benefits ..	660	1. General ..	678
3. Mental Hospitals ..	661	2. Public Hospitals (other than Mental Hospitals)—	
4. Medical Benefits ..	662	1. General ..	678
5. Pensioner Medical Service ..	663	2. Number, Staff and Accommodation ..	679
6. Anti-Tuberculosis Campaign ..	664	3. In-Patients Treated ..	679
7. Anti-Poliomyelitis Campaign ..	665	4. Revenue and Expenditure ..	680
8. Free Milk for School Children Scheme ..	666	5. Summary ..	680
§ 3. Commonwealth Laboratories and Research Institutions—		§ 3. Lepor Hospitals ..	681
1. National Health and Medical Research Council ..	667	§ 4. Mental Hospitals—	
2. The National Biological Standards Laboratory ..	667	1. General ..	681
3. Commonwealth Serum Laboratories ..	668	2. Hospitals, Staff, and Accommodation ..	681
4. The Commonwealth Health Laboratories ..	668	3. Patients ..	681
5. Commonwealth Acoustic Laboratories ..	669	4. Revenue and Expenditure ..	683
6. Commonwealth X-ray and Radium Laboratory ..	669	5. Summary for Australia ..	683
		6. Number of Mental Patients ..	684

CHAPTER XVIII.—WELFARE SERVICES.

A. COMMONWEALTH SOCIAL SERVICES.		B. OTHER SERVICES.	
1. Introduction ..	685	§ 1. Benevolent Homes—	
2. Commonwealth Expenditure on Social and Health Services—		1. General ..	701
1. National Welfare Fund ..	685	2. Principal Institutions ..	701
2. Capital Expenditure ..	687	3. Revenue and Expenditure ..	701
3. Administrative Expenditure ..	687	4. The Aged Persons Homes Act ..	701
3. Age and Invalid Pensions ..	687	§ 2. Orphanages, Industrial Schools, etc.—	
4. Child Endowment ..	689	1. General ..	702
5. Commonwealth Rehabilitation Service ..	693	2. Principal Institutions ..	702
6. Funeral Benefits ..	694	3. Children under Government Authority ..	702
7. Maternity Allowances ..	695	§ 3. Protection of Aborigines ..	703
8. Unemployment, Sickness and Special Benefits ..	696	§ 4. Lifesaving ..	703
9. Widows' Pensions ..	699	§ 5. Royal Humane Society ..	703
10. Reciprocal Agreements with Other Countries—		§ 6. The Order of St. John ..	703
1. New Zealand ..	700	§ 7. Other Charitable Institutions ..	704
2. United Kingdom ..	700		

CHAPTER XIX.—LOCAL GOVERNMENT.

§ 1. Introduction—		§ 2. Local Government Authorities—	
1. Local Government Authorities ..	705	1–6. States ..	706
2. Semi-Governmental Authorities ..	705	7. Area, Population, Dwellings and Value of Ratable Property ..	707
3. Roads, Bridges, etc. ..	705	8. Finances ..	708
4. Water Supply and Sewerage ..	706	§ 3. Local and Semi-Governmental Authorities' Debt—	
5. Harbours ..	706	1. General ..	716
6. Fire Brigades ..	706	2. Local and Semi-Governmental Authorities' Debt ..	716
7. Other Local or Semi-Governmental Activity ..	706		

CHAPTER XIX.—LOCAL GOVERNMENT.—*continued.*

	PAGE		PAGE
§ 4. Roads and Bridges—		§ 5. Water Supply, Sewerage and Drainage—	
1. Commonwealth Government Grants	718	1-6. States	730-744
2-7. States	719-726	§ 6. Harbour Boards and Trusts—	
8. Summary of Roads used for General Traffic	728	1-6. States	744-750
9. Summary of Expenditure on Roads and Bridges	729	§ 7. Fire Brigades—	
		1-6. States	750-752

CHAPTER XX.—PRIVATE FINANCE.

A. CURRENCY.		C. REGISTERED BUILDING AND CO-OPERATIVE SOCIETIES.	
§ 1. General	753	§ 1. Registered Building Societies—	
§ 2. Coinage—		1. Summary	788
1. Coins in Circulation	753	2. Liabilities and Assets	788
2. Issues of Australian Coins	753	3. Co-operative Housing Societies, Victoria	789
3. Profits on Coinage of Silver and Bronze	754	§ 2. Co-operative Societies	789
4. Australian Mints	754		
5. Price of Gold	755	D. INSURANCE.	
§ 3. Notes—		§ 1. Introductory—	
1. General	755	1. Legislation	790
2. The Australian Note Issue	756	2. Insurance Act 1932-1937	790
		3. Life Insurance Act 1945-1953	791
		4. Export Payments Insurance Corporation Act 1956	791
		5. Deposits under Insurance Acts	791
		§ 2. Life Assurance—	
		1. General	791
		2. Offices Transacting Business	792
		3. Australian Business—Policies in Existence	792
		4. New Policies Issued in Australia	793
		5. Policies Matured or Otherwise Discontinued in Australia	794
		6. Premiums and Claims, Australia	796
		7. Total Revenue and Expenditure	798
		8. Liabilities and Assets	799
		9. Loans	800
		§ 3. Fire, Marine and General Insurance—	
		1. General	801
		2. States	801
		3. Classes of Insurance	802
		E. RETAIL HIRE PURCHASE OPERATIONS OF FINANCE BUSINESSES.	
		1. General	803
		2. New Retail Agreements	803
		3. Balances outstanding on Retail Agreements at 30th June	803
		F. CAPITAL RAISINGS BY AUSTRALIAN COMPANIES.	
		1. General	803
		2. Listed Companies	804
		3. Unlisted Companies	805
		4. Listed and Unlisted Companies	805
		G. SHORT-TERM MONEY MARKET.	
		1. General	805
		2. Selected Assets and Liabilities of Authorized Dealers and Rates of Interest on Loans Accepted	806
		H. FRIENDLY SOCIETIES.	
		1. General	807
		2. Societies. Members and Revenue	807
		I. PROBATES AND LETTERS OF ADMINISTRATION	807
		J. LOTTERIES AND BETTING.	
		§ 1. Lotteries	808
		§ 2. Betting	809
		K. GOVERNMENT, SEMI-GOVERNMENTAL AND PARLIAMENTARY PENSION AND SUPERANNUATION SCHEMES.	
		§ 1. Government and Semi-Governmental Pension and Superannuation Schemes	810
		§ 2. Parliamentary Pension and Superannuation Schemes	811

CHAPTER XXI.—PUBLIC FINANCE.

	PAGE		PAGE
A. COMMONWEALTH FINANCE.		D. COMMONWEALTH AND STATE PUBLIC DEBT.	
§ 1. General—		§ 1. General	857
1. Financial Provisions of the Constitution	813	§ 2. The Financial Agreement between the Commonwealth and the States—	
2. Accounts of the Commonwealth Government	813	1. General	857
§ 2. Commonwealth Consolidated Revenue Fund—		2. Australian Loan Council	857
I.—NATURE OF FUND.		3. Loan Raisings for the Commonwealth and States	857
1. Provisions of the Constitution	813	4. Taking over of State Public Debts	857
2. Annual Results of Transactions	813	5. Transferred Properties	858
II.—REVENUE.		6. Payment of Interest	858
1. General	814	7. Sinking Fund	858
2. Taxation	815	8. Borrowing by Semi-Governmental Authorities	858
3. Business Undertakings	822		
4. Other Sources of Revenue	825	§ 3. Commonwealth and State Public Debt Outstanding—	
III.—EXPENDITURE.		1. Public Debt, Annual Interest Payable and Average Rate of Interest	859
1. Details of Expenditure from Consolidated Revenue	825	2. Public Debt and Annual Interest payable	861
2. Defence Services	826	3. State Public Debt and Annual Interest payable	861
3. War and Repatriation Services	827	4. State Public Debt	862
4. Subsidies and Bounties	828	5. Public Debt and Interest Payable in Australian Currency	863
5. Total Cost of Departments	829	6. Public Debt at each Rate of Interest	864
6. National Welfare Fund	832	7. Dates of Maturity	865
7. Debt Redemption Reserve Trust Account	833	8. Short-term Debt	866
8. Loan Consolidation and Investment Reserve Trust Account	833	9. State and Municipal and Semi-Governmental Authority Public Debt	867
9. Business Undertakings	833		
10. Territories	834	§ 4. Commonwealth Loan Raisings—	
11. Capital Works and Services	835	1. General	868
12. Payments to or for the States	835	2. New Loans Raised	868
13. Other Expenditure	840	3. Conversion and Redemption Loans	870
§ 3. Commonwealth Trust Funds—		4. International Bank for Reconstruction and Development Loans	871
1. Receipts, Expenditure and Balances	841	5. Swiss Loan	872
2. Summary	841	6. Canadian Loan	872
§ 4. Commonwealth Loan Fund	842	7. Summary of Loan Transactions	872
		8. Commonwealth and State Public Debt Maturing in Australia Classified by Holder	873
B. STATE FINANCE.		§ 5. National Debt Sinking Fund—	
§ 1. General—		1. Commonwealth Public Debt	874
1. Functions of State Governments	842	2. States' Public Debt	874
2. Accounts of State Governments	843		
3. Inter-relation of Commonwealth and State Finances	843	E. TAXES ON INCOME.	
§ 2. State Consolidated Revenue Funds—		1. General	875
I.—REVENUE.		2. Present Taxes	876
1. General	843	3. Assessable Income	876
2. Revenue Received	844	4. Concessional Deductions	876
3. Sources of Revenue	844	5. Effective Exemption from Tax	877
II.—EXPENDITURE.		6. Rates of Income Tax and Social Services Contribution on Individuals	877
1. General	849	7. The Income Tax (International Agreements) Act, 1953	879
2. Total Expenditure	849	8. Taxes on Specified Incomes	879
3. Details of Expenditure	850	9. Pay-as-you-earn	881
III.—SURPLUS REVENUE.	852	10. Lodgment of Returns and Assessment of Tax	881
§ 3. State Trust Funds	852	11. Company Income Taxes	881
§ 4. State Loan Funds—		12. Yield of Income Taxes	883
1. General	853		
2. Gross Loan Expenditure	853		
3. Total Loan Expenditure	854		
C. COMMONWEALTH AND STATE FINANCE.			
1. Revenue and Expenditure	855		
2. Taxation	856		

CHAPTER XXII.—AGRICULTURAL PRODUCTION.

	PAGE		PAGE
§ 1. Introductory	887	§ 8. Rice	918
§ 2. Progress of Agriculture—		§ 9. Sorghum for Grain	919
1. Early Records	887	§ 10. Potatoes—	
2. Progress of Cultivation	887	1. Area, Production and Yield per Acre	920
3. Area under Sown Pastures	888	2. Gross Value of Potato Crop	921
4. Australian Agricultural Council	888	3. Consumption	921
§ 3. Distribution, Production and Value of Crops—		4. Marketing	921
1. Area of Crops in States and Territories	893	5. Exports	921
2. Relative Areas of Crops in States and Territories	894	§ 11. Onions—	
3. Area of Principal Crops in Australia	894	1. Area, Production and Yield per Acre	921
4. Size Classification of Principal Crops	895	2. Gross Value of Onion Crop	922
5. Weights and Measures	895	3. Consumption	922
6. Production of Crops in States and Territories	895	4. Exports	922
7. Production of Principal Crops in Australia	895	§ 12. Hay—	
8. Yield per Acre of Principal Crops in Australia	896	1. General	923
9. Gross Value of Principal Crops in Australia	896	2. Value of Hay Crop	924
10. Value of Production and Indexes of Price and Quantum of Production	897	3. Farm Stocks of Hay	924
§ 4. Wheat—		4. Exports	924
1. Royal Commission on the Wheat Industry	898	§ 13. Green Fodder—	
2. Licensing of Areas Sown to Wheat, and Acreages Sown	899	1. Nature and Extent	924
3. Legislation relating to Wheat Industry	899	2. Value of Green Fodder Crops	925
4. Marketing of Wheat	900	§ 14. Sugar-cane—	
5. International Wheat Agreements	901	1. Area	925
6. Wheat Farms	902	2. Productive and Unproductive Cane	925
7. Area, Production and Yield per Acre	903	3. Production of Cane and Sugar	925
8. Varieties of Wheat Sown	904	4. Average Production of Cane Sugar	926
9. F.A.Q. Standard of Wheat	905	5. Quality of Cane	927
10. Price of Wheat	905	6. Production and Utilization	927
11. Value of the Wheat Crop	905	7. Consumption in Factories	927
12. Production and Disposal of Wheat in Australia	906	8. Control of Cane Production in Queensland	927
13. Imports of Wheat	906	9. Sugar Agreement in Australia—	
14. Exports of Wheat and Flour	906	Embargo on Imports, etc.	928
15. Stocks of Wheat and Flour	908	10. International Sugar Agreement	928
16. Bulk Handling and Storage of Wheat in Australia	908	11. Net Return for Sugar Crop	928
17. World Area and Production of Wheat	909	12. Exports of Sugar	929
18. Exports—Principal Countries	910	13. Sugar By-products	929
19. Imports—Principal Countries	911	14. Sugar Prices	929
§ 5. Oats—		15. Marketing Arrangements	929
1. Area, Production and Yield per Acre	912	16. Fruit Industry Sugar Concession Committee and Sugar Rebates	930
2. Price of Oats	912	17. Bulk Handling of Sugar	930
3. Value of Oat Crop	913	§ 15. Vineyards—	
4. Exports	913	1. Progress of Cultivation	930
5. Oatmeal, etc.	913	2. Imports and Exports of Wine	931
6. World Production	913	3. Oversea Marketing of Wine	932
§ 6. Maize—		4. Other Viticultural Products	932
1. States Growing Maize	913	5. Production and Disposal of Dried Vine Fruit	932
2. Area, Production and Yield per Acre	913	6. Post-war Contracts	933
3. Price of Maize	914	7. Oversea Marketing of Dried Fruits	933
4. Value of Crop	914	§ 16. Orchards and Fruit-Gardens—	
5. Exports of Maize and Maize Products	914	1. Area	933
6. World Production	915	2. Varieties of Crops	934
§ 7. Barley—		3. Principal Fruit Crops	934
1. Area, Production and Yield per Acre	915	4. Production of Jams and Jellies and Preserved Fruit	935
2. Australian Barley Board	916	5. Consumption of Fruit and Fruit Products	935
3. Prices	917	6. Imports and Exports of Fruit	935
4. Value of Barley Crop	917	7. Marketing of Apples and Pears	936
5. Exports	917	8. Oversea Marketing of Canned Fruit	936
6. Malt	918	§ 17. Vegetables for Human Consumption—	
7. World Production	918	1. Area and Production of Fresh Vegetables	937
		2. Production of Canned and Dehydrated Vegetables	937
		3. Imports and Exports of Vegetables	937
		4. Consumption of Vegetables	937

CHAPTER XXII.—AGRICULTURAL PRODUCTION—*continued.*

	PAGE		PAGE
§ 18. Tobacco—		§ 25. Aerial Agriculture	945
1. States, Area and Production ..	937		
2. The Tobacco Industry ..	938	§ 26. Ensilage—	
3. Oversea Trade ..	939	1. Government Assistance ..	945
§ 19. Hops	939	2. Quantity Made and Stocks held on Farms ..	945
§ 20. Flax—		§ 27. Agricultural Colleges and Experimental Farms ..	946
1. Flax for Fibre ..	940		
2. Flax for Linseed ..	941	§ 28. Tractors on Rural Holdings ..	946
§ 21. Peanuts	941		
§ 22. Cotton—		§ 29. Number and Area of Rural Holdings and Employment Thereon—	
1. General ..	942	1. Number and Area ..	947
2. Area and Production ..	942	2. Special Tabulation Relating to Rural Holdings ..	948
3. Consumption of Raw Cotton ..	942	3. Employment on Rural Holdings ..	948
§ 23. Financial Assistance to Primary Producers ..	943	4. Salaries and Wages Paid to Employees on Rural Holdings ..	949
§ 24. Fertilizers—		5. Persons (of all ages) Residing Permanently on Holding ..	950
1. General ..	943		
2. Imports and Exports ..	943		
3. Quantities Used Locally ..	944		
4. Local Production ..	945		

CHAPTER XXIII.—PASTORAL PRODUCTION.

§ 1. Initiation and Growth of the Pastoral Industry—		§ 5. Wool—	
1. Livestock Numbers ..	951	1. General ..	967
2. Minor Classes of Livestock ..	951	2. Greasy and Scoured Wool ..	967
3. Carrying Capacity of Pastoral Holdings ..	952	3. Production ..	967
4. Value of Pastoral Production ..	952	4. Care Needed in Comparing Clips ..	967
5. Indexes of Quantum and Price of Pastoral Production ..	953	5. Average Weights of Fleeces Shorn ..	968
6. Consumption of Meats ..	954	6. Wool classified according to Quality ..	968
7. Marketing of Meat ..	954	7. World Sheep Population and Wool Production ..	969
§ 2. Horses—		8. War-time Contracts ..	969
1. Distribution throughout Australia ..	955	9. Australian Wool Realization Commission ..	969
2. Oversea Trade in Horses ..	956	10. Australian Wool Bureau ..	970
§ 3. Cattle—		11. Marketing of Wool ..	971
1. Purposes for which Raised ..	956	12. Wool Publicity and Research ..	971
2. Distribution throughout Australia ..	956	13. Consumption of Wool ..	972
3. Classification of Cattle According to Purpose ..	959	14. Exports of Wool ..	973
4. Size Classifications of Cattle Herds ..	959	15. Local Sales of Wool ..	975
5. Comparison with other Countries ..	959	16. Stocks of Wool ..	975
6. Imports and Exports of Cattle ..	960	17. Price ..	975
7. Cattle Slaughtered ..	960	18. Value ..	975
8. Production of Beef and Veal ..	961	19. United Kingdom Importation of Wool ..	976
9. Consumption of Beef and Veal ..	961	20. Principal Importing Countries and Sources of Supply ..	976
10. Exports of Frozen Beef and Veal ..	961		
§ 4. Sheep—		§ 6. Trade in Hides and Skins—	
1. Introduction of Sheep ..	962	1. Extent of Trade ..	977
2. Movement in Sheep Numbers in Australia ..	962	2. Sheepskins with Wool ..	977
3. Distribution throughout Australia ..	963	3. Sheepskins without Wool ..	977
4. Classification of Sheep According to Age, Sex and Breed ..	963	4. Hides ..	978
5. Numbers of Sheep on Rural Holdings ..	964	5. Furred Skins ..	978
6. Comparison with other Countries ..	964	6. Marketing of Hides and Skins ..	979
7. Oversea Imports and Exports of Sheep ..	964		
8. Sheep Slaughtered ..	965	§ 7. Tallow and Lard—	
9. Production of Mutton and Lamb ..	965	1. Consumption of Tallow in Factories ..	979
10. Consumption of Mutton and Lamb ..	965	2. Exports of Tallow and Lard ..	979
11. Exports of Frozen Mutton and Lamb ..	966	3. Marketing of Tallow ..	980
		§ 8. Exports of Principal Pastoral Products ..	980

CHAPTER XXIV.—FARMYARD, DAIRY AND BEE PRODUCTS.

	PAGE		PAGE
§ 1. Introduction—		§ 4. Pigs and Pig Products—	
1. General	981	1. Pigs	996
2. Mixed Farming	981	2. Size of Pig Herds	997
3. Employment	981	3. Pigs Slaughtered	997
4. Growth of the Dairying Industry	981	4. Pigmeat	997
5. Official Supervision of Dairying Industry	982	5. Bacon and Ham	998
6. Australian Agricultural Council	982	6. United Kingdom Contracts	998
		7. Oversea Trade in Pigs and Pig Products	998
§ 2. Value of Farmyard, Dairy and Bee Production and Indexes of Price and Quantum of Production—		§ 5. Poultry-Farming—	
1. Gross Value of Farmyard, Dairy and Bee Production	982	1. General	998
2. Gross and Net Values	983	2. Numbers of Poultry	999
3. Net Value of Production	983	3. Recorded Production and Disposal of Eggs	999
4. Indexes of Quantum and Price of Farmyard, Dairy and Bee Production	984	4. Production and Consumption of Eggs	1000
		5. Marketing of Eggs	1000
§ 3. Dairy Cattle and Dairy Products—		6. Oversea Trade in Poultry Products	1001
1. Dairy Herds	984		
2. Size of Dairy Herds	985	§ 6. Bee-farming—	
3. Total Dairy Production	986	1. Production of Honey and Bees-wax	1001
4. Whole Milk	986	2. Oversea Trade in Bee Products	1002
5. Factory System	987		
6. Butter Production	987	§ 7. Exports of Australian Farmyard, Dairy and Bee Products	1003
7. Cheese Production	988		
8. Condensed, Concentrated and Powdered, etc., Milk Production	989	§ 8. Imports of Dairy and Farmyard Products into the United Kingdom—	
9. Local Consumption of Butter and Cheese	990	1. Summary, Principal Products	1003
10. Butter and Cheese, Equalization Schemes	991	2. Butter	1004
11. Casein Equalization Scheme	991	3. Cheese	1004
12. Wholesale Price of Butter and Cheese in Australia	991	4. Bacon	1004
13. Marketing of Dairy Products	992	5. Pork	1004
14. Commonwealth Subsidies and Stabilization Plans	993	6. Eggs	1004
15. Average Returns from Butter and Cheese Sold and Assessed Farm Production Costs	994	7. Milk Products	1004
16. Dairy Industry Extension Grant	995	8. Other Dairy and Farmyard Products	1004
17. Dairy Industry Research and Sales Promotion	995		
18. Oversea Trade in Butter, Cheese and Milk	995		

CHAPTER XXV.—FORESTRY.

§ 1. Introduction—		§ 5. Employment in Forestry—	
1. Source of Statistics	1005	1. Persons Engaged in Forestry Activities	1014
2. Objects of Forestry	1005	2. Employment by Forestry Departments	1014
		3. Employment in Milling Operations	1015
§ 2. The Forestry Industry—		§ 6. Forest Administration, Protection and Research—	
1. General Account of Forests and Timbers	1006	1. Commonwealth Forestry and Timber Bureau	1015
2. Extent of Forests	1006	2. Commonwealth Forest Products Research	1016
3. Persons Engaged	1007	3. Forestry Activities of the States	1016
4. Value of Production	1008	4. Fire Protection	1016
§ 3. Forested Areas—		§ 7. Oversea Trade in Forest Products, Timber and Timber Products—	
1. Forest Reservations	1009	1. Imports	1017
2. Plantations	1010	2. Exports	1018
§ 4. Forestry Production—			
1. Timber	1011		
2. Veneers, Plywood, etc.	1012		
3. Hardboard	1012		
4. Wood Pulp and Paper	1013		
5. Other	1014		

CHAPTER XXVI.—FISHERIES.

	PAGE		PAGE
§ 1. Introduction—		§ 7. Boats and Equipment1030
1. Source of Statistics1019	§ 8. Whaling1032
2. Presentation of Fisheries Statistics ..1019		§ 9. Inquiries and Research—	
§ 2. The Fishing and Whaling Industries—		1. General1033
1. Resources and Fishing Areas1019	2. Commonwealth Scientific and Industrial Research Organization, Division of Fisheries and Oceanography1033
2. Persons Engaged1020	3. Commonwealth Fisheries Office1033
3. Value of Production1021	4. Fisheries Development Trust Account1033
§ 3. Fisheries Production—		5. North Australia Development Committee1034
1. Summary of Production of Fisheries ..1022		§ 10. Oversea Trade in Products of Fishing and Whaling—	
2. Fish1023	1. Imports of Fish1034
3. Crustaceans1025	2. Exports of Fish1034
4. Molluscs (Edible)1026	3. Imports and Exports of Unmanufactured Shell1035
5. Pearl-shell and Trochus-shell1027	4. Imports and Exports of Marine Animal Oils1036
§ 4. Marketing and Distribution of Fish ..1028			
§ 5. Freezing, Processing and By-products—			
1. Freezing1029		
2. Processing1029		
3. By-products1030		
§ 6. Consumption of Fish1030		

CHAPTER XXVII.—MINERAL INDUSTRY.

§ 1. Introduction—		§ 6. Copper—	
1. Source of Statistics1037	1. Historical1064
2. Presentation of Mineral Statistics ..1037		2. Methods of Mining and Treatment ..1064	
3. Occurrences of Minerals1038	3. Mine Production1065
4. Mineral Concentrates1039	4. Smelter and Refinery Production ..1066	
§ 2. The Mineral Industry—		5. Production in Principal Countries and World Total1066
1. Persons Engaged1039	6. Prices1067
2. Size Classification of Mines and Quarries1040	7. Employment in Copper-mining ..1067	
3. Value of Production1041	8. Assistance to the Copper-mining Industry1067
4. Statistics of the Principal Mining and Quarrying Industries1042	§ 7. Tin—	
§ 3. Mineral Production—		1. Historical1067
1. Quantities of Principal Minerals Produced1046	2. Present Methods of Mining and Treatment1067
2. Quantities of Principal Minerals Produced, Australia1048	3. Mine Production1068
3. Contents of Metallic Minerals Produced1049	4. Smelting and Refining1068
4. Contents of Metallic Minerals Produced in Australia1050	5. Production in Principal Countries and World Total1068
5. Local Value of Minerals Produced ..1050		6. Prices1069
6. Local and Net Value of Mining and Quarrying Production by Industry1051	7. Employment in Tin Mining1069
§ 4. Gold—		§ 8. Iron—	
1. Historical1051	1. Historical1069
2. Present Methods of Mining and Treatment1052	2. Methods of Mining and Treatment ..1070	
3. Mine Production1053	3. Mine Production of Iron Ore1070
4. Refinery Production1054	4. Mine Production of Iron Oxide ..1070	
5. Changes in Stocks of Gold held in Australia1057	5. Iron and Steel Production1071
6. Production in Principal Countries ..1057		6. Production of Iron and Steel in Principal Countries1072
7. Prices of Gold1058	§ 9. Mineral Sands—

OFFICIAL YEAR BOOK

OF THE

COMMONWEALTH OF AUSTRALIA.

CHAPTER I.

DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA.

§ 1. Early Knowledge and Discovery of Australia.

1. **Introduction.**—The following paragraphs contain only a bare outline of the more important facts relating to the early history of Australian discovery. A more detailed summary of these facts may be found in Official Year Book No. 39 (*see* page 1) and earlier issues.

2. **Terra Australis.**—There was, apparently, an early Chaldean tradition as to the existence of an Austral land to the south of India and rumours to that effect found their way in the course of time to Europe. References to this *Terra Australis* are found in the works of Ælianus (A.D. 205–234), Manilius (probably a contemporary of Augustus or Tiberius Caesar), and Ptolemy (A.D. 107–161). Evidence pointing to knowledge of such a land appeared in maps and manuscripts of the Middle Ages and the fourteenth and fifteenth centuries but there is no definite evidence connecting this so-called *Terra Australis* with Australia.

Reference by Marco Polo (1254–1324) to a land called Locac and several indications on maps and globes in the fifteenth and sixteenth centuries have been assumed to relate to Australia, but little weight can now be attached to these suppositions. Cornelius Wytfliet's map of 1597, however, indicates roughly the eastern and western coasts of Australia, as well as the Gulf of Carpentaria, although the oft-quoted passage in his *Descriptionis Ptolemaicæ Augmentum* describing the *Australis Terra* has been considered to have had its origin in the voyages through the Straits of Magellan and the discovery of Tierra del Fuego rather than that of Australia.

3. **Discovery of Australia.**—(i) *The Spaniards.* Disregarding the suggestion, for which there is no evidence, that the Arabs had come to Australia long before the Portuguese, the Spaniards, or the Dutch, and apart from the possibility that the Portuguese may have discovered part of the Australian coast before 1542, the coastal exploration of Australia may be taken as having begun with the Spaniards and the Dutch.

In 1606, the Spaniard Quiros, on reaching the island that has retained the name of Espiritu Santo (the largest island of the New Hebrides group), thought he had discovered the great land of the south, and therefore named the group *La Australia del Espiritu Santo*. After leaving the New Hebrides, Quiros sailed eastward, but Torres, his second-in-command, took a westerly course and passed through the strait that now bears his name. In all probability he sighted the Australian continent, but no mention of it is made in his records. This voyage marks the close of Spanish activity in the work of discovery in the South Seas.

(ii) *The Dutch.* The Dutch discovered Australia when the Dutch East India Company sent the *Duyfken* from Bantam, Java, to explore the islands of New Guinea. During March, 1606, the *Duyfken* coasted along the southern shores of New Guinea and followed the west coast of Cape York peninsula as far as Cape Keer-Weer (Turn Again).

During the following thirty years, there were nine visits of Dutch navigators to Australian waters; by 1636, through their efforts, the coast of Australia from Cape York westward around to the Great Australian Bight had been discovered.

In 1642, Abel Janszoon Tasman set out from Batavia to ascertain the extent of the great southern continent. He named Van Diemen's Land, imagining it to be part of Australia proper, and sailing north-easterly discovered New Zealand and returned to Batavia. In his second voyage, in 1644, Tasman visited the northern coast of Australia, sailing round the Gulf of Carpentaria and along the north-west coast as far south as the tropic of Capricorn. This voyage of Tasman's may be said to have ended the period of Dutch discoveries, although there were subsequent visits by the Dutch to Australia (de Vlamingh in 1696 and Van Delft in 1705).

4. **Discoveries by the English.**—In the meantime, the English had made their first appearance on the Australian coast in 1688, when the north-westerly shores were visited by William Dampier, as supercargo of the *Cygnēt*, a trading vessel whose crew had turned buccaneers. In 1699, he again visited Australia, in command of H.M.S. *Roebuck*, and on his return to England published an account in which a description is given of trees, flowers, birds and reptiles observed, and of encounters with natives.

At the end of the seventeenth century, it was uncertain whether Tasmania and New Zealand were parts of Australia or whether they were separated from it but themselves formed part of a great Antarctic Continent. Lieutenant (later Captain) James Cook's first voyage, though primarily undertaken for the purpose of observing the transit of Venus from Tahiti, had also the objective of ascertaining whether the unexplored part of the southern hemisphere was only an immense mass of water or contained another continent. In command of H.M.S. *Endeavour*, a barque of 370 tons burden carrying about 85 persons, and accompanied by Sir Joseph Banks the botanist, Dr. Solander the naturalist, Green the astronomer, draughtsmen and servants, Cook, after observing the transit of Venus at Tahiti, turned toward New Zealand, sighting that land on 7th October, 1769, in the neighbourhood of Poverty Bay. Circumnavigating the North and South Islands, he proved that New Zealand was connected neither with the supposed Antarctic Continent nor with Australia, and took formal possession thereof in the name of the British Crown. On 20th April, 1770, at 6 a.m., Cook sighted the Australian mainland at a place he called Point Hicks, naming it after his first-lieutenant, who first saw it. Coasting northwards, Botany Bay was discovered on 29th April, 1770. The *Endeavour* dropped anchor and Cook landed on the same day. Cook sailed along the coast in a northerly direction for nearly 1,300 miles until 11th June, 1770, when the *Endeavour* was seriously damaged by striking a coral reef in the vicinity of Trinity Bay. Repairs occupied nearly two months and the *Endeavour* then again set her course to the north, sailing through Torres Strait and anchoring in the Downs on 13th July, 1771. In 1772, Cook was put in command of the ships *Resolution* and *Adventure*, with a view to ascertaining whether a great southern continent existed. Having satisfied himself that, even if it did, it lay so far to the south as to be useless for trade and settlement, he returned to England in 1774. Cook's last voyage was undertaken in 1776, and he met his death on 14th February, 1779, by which date practically the whole coast of Australia had been explored. The only remaining discovery of importance was the existence of a channel between Tasmania and Australia. This was made by Bass and Flinders in 1798.

§ 2. The Annexation of Australia.

1. **Annexation of the Eastern Part of Australia, 1770.**—Although representatives of the nations mentioned in the previous section landed or claimed to have landed on the shores of Australia on various occasions during the sixteenth and seventeenth centuries, it was not until 23rd August, 1770, that the history of Australia was brought into definite political connexion with Western civilization. It was on that date that Captain Cook took possession "of the whole eastern coast, from latitude 38° S. to this place, latitude 10½° S., in right of His Majesty King George the Third". Cook, however, proclaimed British sovereignty over only what are now the eastern parts of New South Wales and Queensland, and formal possession, on behalf of the British Crown, of the whole of the eastern part of the Australian continent and Tasmania was not taken until 26th January, 1788. It was on this last date that Captain Phillip's commission, first issued to him on 12th October, 1786, and amplified on 2nd April, 1787, was read to the people whom he had brought with him in the "First Fleet".

A full historical account of the period referred to may be found in the *Historical Records of New South Wales*, Vol. I., parts 1 and 2.

2. **Original Extent of New South Wales.**—The commission appointed Phillip “Captain-General and Governor-in-Chief in and over our territory called New South Wales, extending from the Northern Cape or extremity of the coast called Cape York, in the latitude of ten degrees thirty-seven minutes south, to the southern extremity of the said territory of New South Wales or South Cape, in the latitude of forty-three degrees thirty-nine minutes south, and of all the country inland westward as far as the one hundred and thirty-fifth degree of east longitude reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitudes aforesaid of ten degrees thirty-seven minutes south and forty-three degrees thirty-nine minutes south”.

Although Captain Cook had taken possession of the North Island of New Zealand in November, 1769, and in January, 1770, of the South Island also, it is doubtful whether, at the time when Captain Phillip's commission was drawn up, New Zealand was considered as one of the “islands adjacent in the Pacific Ocean”. The fact that under the Supreme Court Act (Imperial) of 1823 British residents in New Zealand were brought under the jurisdiction of the Court at Sydney, and that in 1839 there was a proposal on the part of the British Government to appoint a consul in New Zealand, would leave this an open question, as nothing more than extra-territorial jurisdiction may have been intended. Various hoistings of flags notwithstanding, New Zealand does not appear to have become British territory unequivocally until 1840. In that year, on 29th January, Captain Hobson arrived at the Bay of Islands. On the following day, he read the commission, which extended the boundaries of the Colony of New South Wales so as to embrace and comprehend the islands of New Zealand. On 5th February, the Treaty of Waitangi, made with the native chiefs, was signed. Finally, on 21st May, British sovereignty over the islands of New Zealand was explicitly proclaimed.

3. **Extension of New South Wales Westward, 1825.**—On 17th February, 1824, Earl Bathurst notified Sir Thomas Brisbane that he had recommended to His Majesty the dispatch of a ship of war to the north-west coast of New Holland for the purpose of taking possession of the coast between the western coast of Bathurst Island and the eastern side of Coburg Peninsula. Captain James J. Gordon Bremer of H.M.S. *Tamar*, who was selected for the purpose, took possession on 20th September, 1824, of the coast from the 135th to the 129th degree of east longitude. On 16th July, 1825, the whole territory between those boundaries was described in Darling's commission as being within the boundaries of New South Wales, thus increasing its area by 518,134 square miles, and making it, including New Zealand and excluding Tasmania, 2,076,308 square miles, or also excluding New Zealand, 1,972,446 square miles.

4. **Annexation of Western Australia, 1827.**—An expedition under Major Lockyer, sent by Lieutenant-General Sir Ralph Darling, then Governor of New South Wales, to found a settlement at King George Sound, sailed from Sydney on 9th November, 1826, landed at the Sound on 26th December following, and on 21st January, 1827, hoisted the British flag. Captain Stirling, in command of H.M.S. *Success*, arrived at Sydney a few weeks after the departure of the expedition to King George Sound. He obtained the Governor's permission to visit Swan River with a view to seizing a position on the western coast and reporting upon its suitability as a place of settlement. Captain Stirling left Sydney on 17th January, 1827, and on his return in the following April submitted a glowing report on what he described as a “rich and romantic country”, urging its occupation for the purpose of settlement. He left for England in July, 1827, continuing his advocacy—*notwithstanding much discouragement*—with unabated enthusiasm. He was at last successful, the result being mainly due to the formation of an association of prospective settlers having capital at their disposal. He was appointed Lieutenant-Governor and with a party of settlers arrived at Garden Island, near the Swan River, in the ship *Parmelia* in June, 1829. On the 2nd of the preceding month, Captain Fremantle, in command of H.M.S. *Challenge*, arrived and hoisted the British flag on the south head of Swan River, again asserting possession of “all that part of New Holland which is not included within the territory of New South Wales”. Thus, before the middle of 1829, the whole territory now known as the Commonwealth of Australia had been constituted a dependency of the United Kingdom.

§ 3. The Exploration of Australia.

A summary of the more important facts relating to the exploration of Australia was embodied in this Chapter in issues of the Official Year Book up to and including No. 22.

§ 4. The Creation of the Several Colonies.

1. **New South Wales.**—In Governor Phillip's commission of 1786, the mainland of Australia was divided by the 135th meridian of east longitude into two parts. The earliest colonists believed that the present State of Tasmania was actually joined to the mainland, and it was not until 1798 that the contrary was known. In that year, Bass and Flinders proved that it was an island by sailing through Bass Strait. The territory of New South Wales, as originally constituted, and of New Zealand, which may be included although Cook's annexation was not properly given effect to until 1840, consisted of 1,584,389 square miles. A further area of 518,134 square miles was added in 1825, when the western boundary was extended to the 129th east meridian. The territory was subsequently reduced by the separation of various areas to form the other colonies, and at the time of the establishment of the Commonwealth the area of New South Wales was 310,372 square miles.

Lord Howe Island, which is a dependency of New South Wales and for political purposes is included in one of the electorates of Sydney, is situated in latitude 31° 30' south, longitude 159° 5' east, about 436 miles north-east of Sydney, and has an area of 3,220 acres. The climate is mild and the rainfall abundant, but on account of the rocky formation of its surface only about 300 acres are suitable for cultivation, most of which are devoted to the production of Kentia palm seed. The land belongs to the Crown and is occupied rent-free on sufferance. Discovered in 1788, the Island was first settled by a small party of Maoris in 1853; afterwards a colony was settled from Sydney. A Board of Control at Sydney manages the affairs of the Island and supervises the palm seed industry. The population was 278 at the Census of 30th June, 1954.

2. **Tasmania.**—In 1825, Van Diemen's Land, as Tasmania was then called, was politically separated from New South Wales, being constituted a separate colony on 14th June of that year. The area of the colony was 26,215 square miles.

Macquarie Island, about 1,000 miles south-east of Hobart, together with a few rocky islets nearby, has been a dependency of Tasmania since the nineteenth century. In December, 1911, five members of the Australian National Antarctic Expedition landed on the island and remained there until 1915. On 3rd March, 1948, another party was landed to man a new station and this has since been maintained as a scientific base. The island is about 21 miles long and two miles wide.

3. **Western Australia.**—The territory westward of the 129th meridian, comprising 975,920 square miles, was constituted a colony under the name of Western Australia in June, 1829. It was always distinct and independent of New South Wales, though until 1831 the settlement on King George Sound remained under that jurisdiction.

4. **South Australia.**—On 15th August, 1834, the Act 4 and 5 William IV., cap. 95, was passed, creating South Australia a "province", and towards the end of the year 1836 settlement took place. The first Governor, Captain Hindmarsh, R.N., arrived at Holdfast Bay on 28th December, 1836, and on the same day the new colony was officially proclaimed. The new colony embraced 309,850 square miles of territory, lying south of the 26th parallel of south latitude, and between the 141st and 132nd meridians of east longitude. On 10th December, 1861, by the authority of the Imperial Act 24 and 25 Vict., cap. 44, the western boundary of South Australia was extended to coincide with the eastern boundary of Western Australia, namely, the 129th east meridian. The area of the extension was approximately 70,220 square miles. Nearly two years later, on 6th July, 1863, the Northern Territory, comprising 523,620 square miles, by letters patent, was brought under the jurisdiction of South Australia, which thereupon controlled an area of 903,690 square miles.

5. **New Zealand.**—New Zealand, nominally annexed by Captain Cook and formally declared by proclamation in 1840 as a dependency of New South Wales, by letters patent of 16th November of that year, was constituted a separate colony under the powers of the Act 3 and 4 Vict., cap. 62, of 7th August, 1840. Proclamation of the separation was made on 3rd May, 1841. The area of the colony was 103,862 square miles.

6. **Victoria.**—In 1851, what was known as the "Port Phillip District" of New South Wales was constituted the colony of Victoria, "bounded on the north and north-west by a straight line drawn from Cape Howe to the nearest source of the River Murray and thence by the course of that river to the eastern boundary of the colony of South Australia". The area of the new colony was 87,884 square miles, and its separate existence took effect from 1st July, 1851, upon the issuing of the writs for the first election of elective members of the Legislative Council.

7. **Queensland.**—The northern squatting districts of Moreton, Darling Downs, Burnett, Wide Bay, Maranoa, Leichhardt and Port Curtis, together with the reputed county of Stanley, were granted an independent administration and formed into a distinct colony

under the name of Queensland by letters patent dated 6th June, 1859, although separation from New South Wales was not completed until 10th December of the same year, upon the assumption of office of the first Governor. The territory comprised in the new colony was "so much of the colony of New South Wales as lies northwards of a line commencing on the sea-coast at Point Danger in latitude about 28° 8' south, running westward along the Macpherson and Dividing Ranges and the Dumaresq River to the MacIntyre River, thence downward to the 29th parallel of south latitude, and following that parallel westerly to the 141st meridian of east longitude, which is the eastern boundary of South Australia, together with all the adjacent islands, their members, and appurtenances in the Pacific Ocean". The area of the colony thus constituted was 554,300 square miles. By letters patent dated 13th March, 1861, forwarded by the Colonial Secretary to the Governor of Queensland on 12th April, 1862, the area of Queensland was increased by the annexation of "so much of the colony of New South Wales as lies to the northward of the 26th parallel of south latitude, and between the 141st and 138th meridians of east longitude, together with all and every the adjacent islands, their members, and appurtenances, in the Gulf of Carpentaria." With this addition the area of Queensland became 670,500 square miles. Following a thorough revision of the area of each Local Government Area of Queensland, based on the most recent maps available, the Surveyor-General, in 1958, determined the area of Queensland as 667,000 square miles—a reduction of 3,500 square miles from the area previously determined.

§ 5. The Establishment of the Commonwealth of Australia.

1. General.—On 1st January, 1901, the colonies mentioned, with the exception of New Zealand, were federated under the name of the "Commonwealth of Australia," the designation of "Colonies"—except in the case of the Northern Territory, to which the designation "Territory" is applied—being at the same time changed to that of "States".

2. Transfer of the Northern Territory to the Commonwealth.—On 7th December, 1907, the Commonwealth and the State of South Australia entered into an agreement for the surrender to and acceptance by the Commonwealth, of the Northern Territory, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given by the South Australian Parliament under The Northern Territory Surrender Act 1907 (assented to on 14th May, 1908) and by the Commonwealth Parliament under the Northern Territory Acceptance Act 1910 (assented to on 16th November, 1910). The Territory was formally transferred to the Commonwealth on 1st January, 1911, and became the Northern Territory of Australia.

3. Transfer of the Australian Capital Territory to the Commonwealth.—On 18th October, 1909, the Commonwealth and the State of New South Wales entered into an agreement for the surrender to and acceptance by the Commonwealth of an area of 911 square miles as the Seat of Government of the Commonwealth. In December, 1909, Acts were passed by the Commonwealth and New South Wales Parliaments approving the agreement, and on 5th December, 1910, a proclamation was issued vesting the Territory in the Commonwealth on and from 1st January, 1911. By the Jervis Bay Territory Acceptance Act 1915, an area of 28 square miles at Jervis Bay, surrendered by New South Wales according to an agreement made in 1913, was accepted by the Commonwealth, and was transferred as from 4th September, 1915.

4. Present Composition of the Commonwealth.—Following the revision of the area of Queensland, as mentioned in § 4 above, the total area of the Commonwealth of Australia has been determined as 2,971,081 square miles. The dates of creation and the areas of its component States and Territories are shown below:—

THE COMMONWEALTH OF AUSTRALIA: AREA, ETC., OF COMPONENT STATES AND TERRITORIES.

State or Territory.	Year of Formation into Separate Colony or Territory.	Present Area in Square Miles.	State or Territory.	Year of Formation into Separate Colony or Territory.	Present Area in Square Miles.
New South Wales	1786	309,433	Northern Territory	1863	523,620
Victoria.. ..	1851	87,884	Australian Capital Territory ..	1911	939
Queensland ..	1859	667,000			
South Australia ..	1834	380,070			
Western Australia	1829	975,920	Commonwealth of Australia	2,971,081
Tasmania ..	1825	26,215			

§ 6. The Constitutions of the States and of the Commonwealth.

1. **General.**—Information regarding the development of the Constitutions of the various Colonies (now States), together with a brief history of the Federal movement in Australia, was embodied in this Chapter in issues of the Official Year Book up to and including No. 22.

2. **Commonwealth Constitution Act.**—The Commonwealth of Australia Constitution Act, 63 and 64 Vict., Chapter 12, namely: “An Act to constitute the Commonwealth of Australia”, as amended by the Constitution Alteration (Senate Elections) 1906, the Constitution Alteration (State Debts) 1909, the Constitution Alteration (State Debts) 1928, and the Constitution Alteration (Social Services) 1946, is given *in extenso* hereunder, and the text contains all the alterations of the Constitution which have been made up to and including 31st December, 1959.

THE COMMONWEALTH OF AUSTRALIA CONSTITUTION ACT,
63 & 64 VICT., CHAPTER 12.

An Act to constitute the Commonwealth of Australia. (9th July, 1900.)

WHEREAS the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established:

And whereas it is expedient to provide for the admission into the Commonwealth of other Australian Colonies and possessions of the Queen:

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the Commonwealth of Australia Constitution Act.
2. The provisions of this Act referring to the Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.
3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. But the Queen may, at any time after the proclamation, appoint a Governor-General for the Commonwealth.
4. The Commonwealth shall be established, and the Constitution of the Commonwealth shall take effect, on and after the day so appointed. But the Parliaments of the several colonies may at any time after the passing of this Act make any such laws, to come into operation on the day so appointed, as they might have made if the Constitution had taken effect at the passing of this Act.
5. This Act, and all laws made by the Parliament of the Commonwealth under the Constitution, shall be binding on the courts, judges, and people of every State and of every part of the Commonwealth, notwithstanding anything in the laws of any State; and the laws of the Commonwealth shall be in force on all British ships, the Queen's ships of war excepted, whose first port of clearance and whose port of destination are in the Commonwealth.
6. “The Commonwealth” shall mean the Commonwealth of Australia as established under this Act.
 “The States” shall mean such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia, and South Australia, including the northern territory of South Australia, as for the time being are parts of the Commonwealth, and such colonies or territories as may be admitted into or established by the Commonwealth as States; and each of such parts of the Commonwealth shall be called “a State.”
 “Original States” shall mean such States as are parts of the Commonwealth at its establishment.

7. The Federal Council of Australasia Act, 1885, is hereby repealed, but so as not to affect any laws passed by the Federal Council of Australasia and in force at the establishment of the Commonwealth.

Any such law may be repealed as to any State by the Parliament of the Commonwealth, or as to any colony not being a State by the Parliament thereof.

8. After the passing of this Act the Colonial Boundaries Act, 1895, shall not apply to any colony which becomes a State of the Commonwealth; but the Commonwealth shall be taken to be a self-governing colony for the purposes of that Act.

9. The Constitution of the Commonwealth shall be as follows:—

THE CONSTITUTION.

This Constitution is divided as follows:—

- Chapter I.—The Parliament:
 - Part I.—General:
 - Part II.—The Senate:
 - Part III.—The House of Representatives:
 - Part IV.—Both Houses of the Parliament:
 - Part V.—Powers of the Parliament:
- Chapter II.—The Executive Government:
- Chapter III.—The Judicature:
- Chapter IV.—Finance and Trade:
- Chapter V.—The States:
- Chapter VI.—New States:
- Chapter VII.—Miscellaneous:
- Chapter VIII.—Alteration of the Constitution.
- The Schedule.

CHAPTER I.—THE PARLIAMENT.

PART I.—GENERAL.

1. The legislative power of the Commonwealth shall be vested in a Federal Parliament, which shall consist of the Queen, a Senate, and a House of Representatives, and which is hereinafter called "The Parliament", or "The Parliament of the Commonwealth".

2. A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.

3. There shall be payable to the Queen out of the Consolidated Revenue Fund of the Commonwealth, for the salary of the Governor-General, an annual sum which, until the Parliament otherwise provides, shall be ten thousand pounds.

The salary of a Governor-General shall not be altered during his continuance in office.

4. The provisions of this Constitution relating to the Governor-General extend and apply to the Governor-General for the time being, or such person as the Queen may appoint to administer the Government of the Commonwealth; but no such person shall be entitled to receive any salary from the Commonwealth in respect of any other office during his administration of the Government of the Commonwealth.

5. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise prorogue the Parliament, and may in like manner dissolve the House of Representatives.

After any general election the Parliament shall be summoned to meet not later than thirty days after the day appointed for the return of the writs.

The Parliament shall be summoned to meet not later than six months after the establishment of the Commonwealth.

6. There shall be a session of the Parliament once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one session and its first sitting in the next session.

PART II.—THE SENATE.

7. The Senate shall be composed of senators for each State, directly chosen by the people of the State, voting, until the Parliament otherwise provides, as one electorate.

But until the Parliament of the Commonwealth otherwise provides, the Parliament of the State of Queensland, if that State be an Original State, may make laws dividing the State into divisions and determining the number of senators to be chosen for each division, and in the absence of such provision the State shall be one electorate.

Until the Parliament otherwise provides there shall be six senators for each Original State.* The Parliament may make laws increasing or diminishing the number of senators for each State, but so that equal representation of the several Original States shall be maintained and that no Original State shall have less than six senators.

The senators shall be chosen for a term of six years, and the names of the senators chosen for each State shall be certified by the Governor to the Governor-General.

8. The qualification of electors of senators shall be in each State that which is prescribed by this Constitution, or by the Parliament, as the qualification for electors of members of the House of Representatives; but in the choosing of senators each elector shall vote only once.

9. The Parliament of the Commonwealth may make laws prescribing the method of choosing senators, but so that the method shall be uniform for all the States. Subject to any such law, the Parliament of each State may make laws prescribing the method of choosing the senators for that State.

The Parliament of a State may make laws for determining the times and places of elections of senators for the State.

10. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State, for the time being, relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections of senators for the State.

11. The Senate may proceed to the despatch of business, notwithstanding the failure of any State to provide for its representation in the Senate.

12. The Governor of any State may cause writs to be issued for elections of senators for the State. In case of the dissolution of the Senate the writs shall be issued within ten days from the proclamation of such dissolution.

13. As soon as may be after the Senate first meets, and after each first meeting of the Senate following a dissolution thereof, the Senate shall divide the senators chosen for each State into two classes, as nearly equal in number as practicable; and the places of the senators of the first class shall become vacant at the expiration of [the third year] *three years*,† and the places of those of the second class at the expiration of [the sixth year] *six years*,† from the beginning of their term of service; and afterwards the places of senators shall become vacant at the expiration of six years from the beginning of their term of service.

The election to fill vacant places shall be made [in the year at the expiration of which] *within one year before*† the places are to become vacant.

For the purposes of this section the term of service of a senator shall be taken to begin on the first day of [January] *July*† following the day of his election, except in the cases of the first election and of the election next after any dissolution of the Senate, when it shall be taken to begin on the first day of [January] *July*† preceding the day of his election.

14. Whenever the number of senators for a State is increased or diminished, the Parliament of the Commonwealth may make such provision for the vacating of the places of senators for the State as it seems necessary to maintain regularity in the rotation.

15. If the place of a senator becomes vacant before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen shall, sitting and voting together, choose a person to hold the place until the expiration of the term, or until the election of a successor as hereinafter provided, whichever first happens. But if the Houses of Parliament of the State are not in session at the time when the vacancy is notified,

* The Parliament has otherwise provided, by means of the Representation Act 1948, that the number of senators shall be ten for each State from the first meeting of Parliament after the first dissolution of the House of Representatives occurring after the commencement of the Act (18th May, 1948).

† As amended by Section 2 of the Constitution Alteration (Senate Elections) 1906. The words in *are brackets* have been repealed; amendments are shown in italics.

the Governor of the State, with the advice of the Executive Council thereof, may appoint a person to hold the place until the expiration of fourteen days after the beginning of the next session of the Parliament of the State, or until the election of a successor, whichever first happens.

At the next general election of members of the House of Representatives, or at the next election of senators for the State, whichever first happens, a successor shall, if the term has not then expired, be chosen to hold the place from the date of his election until the expiration of the term.

The name of any senator so chosen or appointed shall be certified by the Governor of the State to the Governor-General.

16. The qualifications of a senator shall be the same as those of a member of the House of Representatives.

17. The Senate shall, before proceeding to the despatch of any other business, choose a senator to be the President of the Senate; and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President.

The President shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office or his seat by writing addressed to the Governor-General.

18. Before or during any absence of the President, the Senate may choose a senator to perform his duties in his absence.

19. A senator may, by writing addressed to the President, or to the Governor-General if there is no President or if the President is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

20. The place of a senator shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the Senate, fails to attend the Senate.

21. Whenever a vacancy happens in the Senate, the President, or if there is no President or if the President is absent from the Commonwealth the Governor-General, shall notify the same to the Governor of the State in the representation of which the vacancy has happened.

22. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

23. Questions arising in the Senate shall be determined by a majority of votes, and each senator shall have one vote. The President shall in all cases be entitled to a vote; and when the votes are equal the question shall pass in the negative.

PART III.—THE HOUSE OF REPRESENTATIVES.

24. The House of Representatives shall be composed of members directly chosen by the people of the Commonwealth, and the number of such members shall be, as nearly as practicable, twice the number of the senators.

The number of members chosen in the several States shall be in proportion to the respective numbers of their people, and shall, until the Parliament otherwise provides, be determined, whenever necessary, in the following manner:—

- (i) A quota shall be ascertained by dividing the number of the people of the Commonwealth, as shown by the latest statistics of the Commonwealth, by twice the number of the senators;
- (ii) The number of members to be chosen in each State shall be determined by dividing the number of the people of the State, as shown by the latest statistics of the Commonwealth, by the quota; and if on such division there is a remainder greater than one-half of the quota, one more member shall be chosen in the State.

But notwithstanding anything in this section five members at least shall be chosen in each Original State.

25. For the purposes of the last section, if by the law of any State all persons of any race are disqualified from voting at elections for the more numerous House of the Parliament of the State, then, in reckoning the number of the people of the State or of the Commonwealth, persons of that race resident in that State shall not be counted.

26. Notwithstanding anything in section twenty-four, the number of members to be chosen in each State at the first election shall be as follows:—

New South Wales ..	23	South Australia ..	6
Victoria ..	20	Tasmania ..	5
Queensland ..	8		

Provided that if Western Australia is an Original State, the numbers shall be as follows:—

New South Wales ..	26	South Australia ..	7
Victoria ..	23	Western Australia ..	5
Queensland ..	9	Tasmania ..	5

27. Subject to this Constitution, the Parliament may make laws for increasing or diminishing the number of the members of the House of Representatives.

28. Every House of Representatives shall continue for three years from the first meeting of the House, and no longer, but may be sooner dissolved by the Governor-General.

29. Until the Parliament of the Commonwealth otherwise provides, the Parliament of any State may make laws for determining the divisions in each State for which members of the House of Representatives may be chosen, and the number of members to be chosen for each division. A division shall not be formed out of parts of different States.

In the absence of other provision, each State shall be one electorate.

30. Until the Parliament otherwise provides, the qualification of electors of members of the House of Representatives shall be in each State that which is prescribed by the law of the State as the qualification of electors of the more numerous House of Parliament of the State; but in the choosing of members each elector shall vote only once.*

31. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State for the time being relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections in the State of members of the House of Representatives.

32. The Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives.

After the first general election, the writs shall be issued within ten days from the expiry of a House of Representatives or from the proclamation of a dissolution thereof.

33. Whenever a vacancy happens in the House of Representatives, the Speaker shall issue his writ for the election of a new member, or if there is no Speaker or if he is absent from the Commonwealth the Governor-General in Council may issue the writ.

34. Until the Parliament otherwise provides, the qualifications of a member of the House of Representatives shall be as follows:—

- (i) He must be of the full age of twenty-one years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at the least a resident within the limits of the Commonwealth as existing at the time when he is chosen:
- (ii) He must be a subject of the Queen, either natural-born or for at least five years naturalized under a law of the United Kingdom, or of a Colony which has become or becomes a State, or of the Commonwealth, or of a State.†

35. The House of Representatives shall, before proceeding to the despatch of any other business, choose a member to be the Speaker of the House, and as often as the office of Speaker becomes vacant the House shall again choose a member to be the Speaker.

The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing addressed to the Governor-General.

36. Before or during any absence of the Speaker, the House of Representatives may choose a member to perform his duties in his absence.

* The Parliament has otherwise provided, by means of the Commonwealth Electoral Act 1918-1949, Section 39 (repealing an earlier provision made by the Commonwealth Franchise Act 1902). For present qualifications see Chapter III.—General Government.

† The Parliament has otherwise provided, by means of the Commonwealth Electoral Act 1918-1949, Section 69. For present qualifications see Chapter III.—General Government.

37. A member may by writing addressed to the Speaker, or to the Governor-General if there is no Speaker or if the Speaker is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

38. The place of a member shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the House, fails to attend the House.

39. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the members of the House of Representatives shall be necessary to constitute a meeting of the House for the exercise of its powers.

40. Questions arising in the House of Representatives shall be determined by a majority of votes other than that of the Speaker. The Speaker shall not vote unless the numbers are equal, and then he shall have a casting vote.

PART IV.—BOTH HOUSES OF THE PARLIAMENT.

41. No adult person who has or acquires a right to vote at elections for the more numerous House of the Parliament of a State shall, while the right continues, be prevented by any law of the Commonwealth from voting at elections for either House of the Parliament of the Commonwealth.

42. Every senator and every member of the House of Representatives shall before taking his seat make and subscribe before the Governor-General, or some person authorized by him, an oath or affirmation of allegiance in the form set forth in the schedule to this Constitution.

43. A member of either House of the Parliament shall be incapable of being chosen or of sitting as a member of the other House.

44. Any person who—

- (i) Is under any acknowledgment of allegiance, obedience, or adherence to a foreign power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign power: or
- (ii) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of a State by imprisonment for one year or longer: or
- (iii) Is an undischarged bankrupt or insolvent: or
- (iv) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth: or
- (v) Has any direct or indirect pecuniary interest in any agreement with the Public Service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than twenty-five persons:

shall be incapable of being chosen or of sitting as a senator or a member of the House of Representatives.

But sub-section iv. does not apply to the office of any of the Queen's Ministers of State for the Commonwealth, or of any of the Queen's Ministers for a State, or to the receipt of pay, half-pay, or a pension by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

45. If a senator or member of the House of Representatives—

- (i) Becomes subject to any of the disabilities mentioned in the last preceding section: or
- (ii) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors: or
- (iii) Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered in the Parliament to any person or State:

his place shall thereupon become vacant.

46. Until the Parliament otherwise provides, any person declared by this Constitution to be incapable of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

47. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House shall be determined by the House in which the question arises.

48. Until the Parliament otherwise provides, each senator and each member of the House of Representatives shall receive an allowance of four hundred pounds a year, to be reckoned from the day on which he takes his seat.*

49. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committees of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Commons House of Parliament of the United Kingdom, and of its members and committees, at the establishment of the Commonwealth.

50. Each House of the Parliament may make rules and orders with respect to—

- (i) The mode in which its powers, privileges, and immunities may be exercised and upheld;
- (ii) The order and conduct of its business and proceedings either separately or jointly with the other House.

PART V.—POWERS OF THE PARLIAMENT.†

51. The Parliament shall, subject to this Constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to:—

- (i) Trade and commerce with other countries, and among the States;
- (ii) Taxation; but so as not to discriminate between States or parts of States;
- (iii) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth;
- (iv) Borrowing money on the public credit of the Commonwealth;
- (v) Postal, telegraphic, telephonic, and other like services;
- (vi) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth;
- (vii) Lighthouses, lightships, beacons and buoys;
- (viii) Astronomical and meteorological observations;
- (ix) Quarantine;
- (x) Fisheries in Australian waters beyond territorial limits;
- (xi) Census and statistics;
- (xii) Currency, coinage, and legal tender;
- (xiii) Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money;
- (xiv) Insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned;
- (xv) Weights and measures;
- (xvi) Bills of exchange and promissory notes;
- (xvii) Bankruptcy and insolvency;
- (xviii) Copyrights, patents of inventions and designs, and trade marks;
- (xix) Naturalization and aliens;
- (xx) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth;
- (xxi) Marriage:

* The Parliamentary allowance was increased to £600 a year in 1907 (except in the cases of Ministers, the Presiding Officers of the two Houses, and the Chairman of Committees, whose allowances remained at £400 in addition to the emoluments of office), and to £1,000 a year in 1920 (Ministers, etc., £800). Under financial emergency legislation Parliamentary salaries and allowances were reduced generally, the lowest level reached in respect of the Parliamentary allowance being £750 a year in 1932. Subsequently there was a gradual restoration to former levels, the allowance reaching £1,000 a year again in 1938, when, also, the proviso for the reduced allowance to Ministers, &c., was removed. In 1947, the Parliamentary allowance was increased to £1,500 a year, in 1952 to £1,750 and in 1959 to £2,750. In 1920, additional allowances of £200 and £400 a year, respectively, were granted to the Leaders of the Opposition in the Senate and the House of Representatives, which were increased to £300 and £600, respectively, in 1947 and to £1,500 and £3,250, respectively, in 1959. In 1947, an additional allowance of £400 a year was granted to the Leader in the House of Representatives (other than the Leader of the Opposition) of a recognized political party which has not less than ten members in the House of Representatives and of which no member is a Minister and this was increased in 1959 to £750.

† Particulars of proposed laws which were submitted to referendums are referred to in Chapter III.—General Government.

- (xxii) Divorce and matrimonial causes; and in relation thereto, parental rights, and the custody and guardianship of infants;
- (xxiii) Invalid and old-age pensions:
- (xxiiiA) **The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances:*
- (xxiv) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the courts of the States:
- (xxv) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States:
- (xxvi) The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws:
- (xxvii) Immigration and emigration:
- (xxviii) The influx of criminals:
- (xxix) External affairs:
- (xxx) The relations of the Commonwealth with the islands of the Pacific:
- (xxxi) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws:
- (xxxii) The control of railways with respect to transport for the naval and military purposes of the Commonwealth:
- (xxxiii) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State:
- (xxxiv) Railway construction and extension in any State with the consent of that State:
- (xxxv) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State:
- (xxxvi) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides:
- (xxxvii) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law:
- (xxxviii) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia:
- (xxxix) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.

52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i) The seat of Government of the Commonwealth, and all places acquired by the Commonwealth for public purposes:
- (ii) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth:
- (iii) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

53. Proposed laws appropriating revenue or moneys, or imposing taxation, shall not originate in the Senate. But a proposed law shall not be taken to appropriate revenue or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand or payment or appropriation of fees for licences, or fees for services under the proposed law.

The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

The Senate may not amend any proposed law so as to increase any proposed charge or burden on the people.

* Under Section 2 of the Constitution Alteration (Social Services) 1946, the Constitution was amended by the insertion of this paragraph.

The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein. And the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

Except as provided in this section, the Senate shall have equal power with the House of Representatives in respect of all proposed laws.

54. The proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation.

55. Laws imposing taxation shall deal only with the imposition of taxation, and any provision therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of customs or of excise, shall deal with one subject of taxation only; but laws imposing duties of customs shall deal with duties of customs only, and laws imposing duties of excise shall deal with duties of excise only.

56. A vote, resolution, or proposed law for the appropriation of revenue or moneys shall not be passed unless the purpose of the appropriation has in the same session been recommended by message of the Governor-General to the House in which the proposal originated.

57. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives.

The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.

60. A proposed law reserved for the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of the Parliament, or by Proclamation, that it has received the Queen's assent.

CHAPTER II.—THE EXECUTIVE GOVERNMENT.

61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution, and of the laws of the Commonwealth.

62. There shall be a Federal Executive Council to advise the Governor-General in the government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.

63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.

64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish.

Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's Ministers of State for the Commonwealth.

After the first general election no Minister of State shall hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives.

65. Until the Parliament otherwise provides, the Ministers of State shall not exceed seven in number, and shall hold such offices as the Parliament prescribes, or, in the absence of provision, as the Governor-General directs.*

66. There shall be payable to the Queen, out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of the Ministers of State, an annual sum which until the Parliament otherwise provides, shall not exceed twelve thousand pounds a year.*

67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

69. On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth:—

Posts, telegraphs, and telephones:	Lighthouses, lightships, beacons, and buoys:
Naval and military defence:	Quarantine.

But the Departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

70. In respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which at the establishment of the Commonwealth are vested in the Governor of a Colony, or in the Governor of a Colony with the advice of his Executive Council, or in any authority of a Colony, shall vest in the Governor-General, or in the Governor-General in Council, or in the authority exercising similar powers under the Commonwealth, as the case requires.

* The Ministers of State were increased to eight in 1915, to nine in 1917, to ten in 1935, to eleven in 1938, and to nineteen in 1941, a special war-time provision during the continuance in operation of the National Security Act which was extended in 1946 on the expiry of that Act. The number was increased to twenty in 1951 and to twenty-two in 1956. The annual appropriation for Ministers' salaries received in addition to their allowances as Members (*see* p. 12) was increased to £13,650 in 1915 and to £15,300 in 1917. Under financial emergency legislation, in addition to the reductions in Members' allowances the appropriation for Ministers was also reduced, in 1932 reaching the level of £10,710. The reductions were removed gradually, and finally in 1938 when the appropriation was £16,950. At the same time, an additional allowance of £1,500 a year was granted to the Prime Minister, and the proviso for the reduced Parliamentary allowance to Ministers was removed. In 1941, the annual appropriation for Ministers was increased, as a war-time provision, to £21,250. This was extended in 1946. In 1947, the appropriation was increased to £27,650, in 1951 to £29,000, in 1952 to £41,000, and in 1956 to £46,500.

CHAPTER III.—THE JUDICATURE.

71. The judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and so many other Justices, not less than two, as the Parliament prescribes.*

72. The Justices of the High Court and of the other Courts created by the Parliament—

- (i) Shall be appointed by the Governor-General in Council:
- (ii) Shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity:
- (iii) Shall receive such remuneration as the Parliament may fix; but the remuneration shall not be diminished during their continuance in office.*

73. The High Court shall have jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

- (i) Of any Justice or Justices exercising the original jurisdiction of the High Court:
- (ii) Of any other federal court, or court exercising federal jurisdiction; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council:
- (iii) Of the Inter-State Commission, but as to questions of law only:

and the judgment of the High Court in all such cases shall be final and conclusive.

But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme Court of a State in any matter in which at the establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States shall be applicable to appeals from them to the High Court.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits *inter se* of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits *inter se* of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court may so certify if satisfied that for any special reason the certificate should be granted, and thereupon an appeal shall lie to Her Majesty in Council on the question without further leave.

Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to Her Majesty in Council. The Parliament may make laws limiting the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

75. In all matters—

- (i) Arising under any treaty:
- (ii) Affecting consuls or other representatives of other countries:
- (iii) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party:
- (iv) Between States, or between residents of different States, or between a State and a resident of another State:
- (v) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth:

the High Court shall have original jurisdiction.

* The Judiciary Act 1903 provided for a Chief Justice and two other Justices. Subsequent amendments to the Act increased the number of other Justices to four and later six, and then reduced it to five. In 1946, the number was again increased to six. The Judiciary Act 1903 also provided for the payment of a salary of £3,500 a year to the Chief Justice and of £3,000 a year to each other Justice. In 1947, these salaries were increased respectively to £4,500 and £4,000 a year, in 1950 to £5,000 and £4,500 a year, and in 1955 to £8,000 and £6,500 a year.

76. The Parliament may make laws conferring original jurisdiction on the High Court in any matter—

- (i) Arising under this Constitution, or involving its interpretation:
- (ii) Arising under any laws made by the Parliament:
- (iii) Of Admiralty and maritime jurisdiction:
- (iv) Relating to the same subject-matter claimed under the laws of different States.

77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—

- (i) Defining the jurisdiction of any federal court other than the High Court:
- (ii) Defining the extent to which the jurisdiction of any federal court shall be exclusive of that which belongs to or is invested in the courts of the States:
- (iii) Investing any court of a State with federal jurisdiction.

78. The Parliament may make laws conferring rights to proceed against the Commonwealth or a State in respect of matters within the limits of the judicial power.

79. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.

80. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if the offence was not committed within any State the trial shall be held at such place or places as the Parliament prescribes.

CHAPTER IV.—FINANCE AND TRADE.

81. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.

82. The costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon; and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.

83. No money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law.

But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth and for the holding of the first elections for the Parliament.

84. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth.

Any such officer who is not retained in the service of the Commonwealth shall, unless he is appointed to some other office of equal emolument in the public service of the State, be entitled to receive from the State any pension, gratuity, or other compensation, payable under the law of the State on the abolition of his office.

Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth; but the State shall pay to the Commonwealth a part thereof, to be calculated on the proportion which his term of service with the State bears to his whole term of service, and for the purpose of the calculation his salary shall be taken to be that paid to him by the State at the time of the transfer.

Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if he had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

85. When any department of the public service of a State is transferred to the Commonwealth—

- (i) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth; but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary;
- (ii) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department; the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth;
- (iii) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section; if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament;
- (iv) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.

86. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.

87. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.

The balance shall, in accordance with this Constitution, be paid to the several States, or applied towards the payment of interest on debts of the several States taken over by the Commonwealth.

88. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.

89. Until the imposition of uniform duties of customs—

- (i) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth.
- (ii) The Commonwealth shall debit to each State—
 - (a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance, as at the time of transfer, of any department transferred from the State to the Commonwealth;
 - (b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.
- (iii) The Commonwealth shall pay to each State month by month the balance (if any) in favour of the State.

90. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.

92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two

years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

93. During the first five years after the imposition of uniform duties of customs, and thereafter until the Parliament otherwise provides—

- (i) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State:
- (ii) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.

94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth.

95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an Original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

96. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned whenever the Colony, or the Government or an officer of the Colony, is mentioned.

98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.

99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.

100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.

101. There shall be an Inter-State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.

102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connexion with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter-State Commission.

103. The members of the Inter-State Commission—

- (i) Shall be appointed by the Governor-General in Council;
- (ii) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity;
- (iii) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office.

104. Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter-State Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States.

105. The Parliament may take over from the States their public debts [as existing at the establishment of the Commonwealth],* or a proportion thereof according to the respective numbers of their people as shown by the latest statistics of the Commonwealth, and may convert, renew, or consolidate such debts, or any part thereof; and the States shall indemnify the Commonwealth in respect of the debts taken over, and thereafter the interest payable in respect of the debts shall be deducted and retained from the portions of the surplus revenue of the Commonwealth payable to the several States, or if such surplus is insufficient, or if there is no surplus, then the deficiency or the whole amount shall be paid by the several States.

105A.† (1.) *The Commonwealth may make agreements with the States with respect to the public debts of the States, including—*

- (a) *the taking over of such debts by the Commonwealth;*
- (b) *the management of such debts;*
- (c) *the payment of interest and the provision and management of sinking funds in respect of such debts;*
- (d) *the consolidation, renewal, conversion, and redemption of such debts;*
- (e) *the indemnification of the Commonwealth by the States in respect of debts taken over by the Commonwealth; and*
- (f) *the borrowing of money by the States or by the Commonwealth, or by the Commonwealth for the States.*

(2.) *The Parliament may make laws for validating any such agreement made before the commencement of this section.*

(3.) *The Parliament may make laws for the carrying out by the parties thereto of any such agreement.*

(4.) *Any such agreement may be varied or rescinded by the parties thereto.*

(5.) *Every such agreement and any such variation thereof shall be binding upon the Commonwealth and the States parties thereto notwithstanding anything contained in this Constitution or the Constitution of the several States or in any law of the Parliament of the Commonwealth or of any State.*

(6.) *The powers conferred by this section shall not be construed as being limited in any way to the provisions of section one hundred and five of this Constitution.*

CHAPTER V.—THE STATES.

106. The Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.

107. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be.

* Under Section 2 of the Constitution Alteration (State Debts) 1909, the words in square brackets are omitted.

† Under Section 2 of the Constitution Alteration (State Debts) 1928, the Constitution was amended by the insertion of this section.

108. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State: and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

109. When a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.

110. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the government of the State.

111. The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.

112. After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State; but the net produce of all charges so levied shall be for the use of the Commonwealth; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

113. All fermented, distilled, or other intoxicating liquids passing into any State or remaining therein for use, consumption, sale, or storage, shall be subject to the laws of the State as if such liquids had been produced in the State.

114. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

115. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.

116. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.

117. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.

118. Full faith and credit shall be given, throughout the Commonwealth, to the laws, the public Acts and records, and the judicial proceedings of every State.

119. The Commonwealth shall protect every State against invasion and, on the application of the Executive Government of the State, against domestic violence.

120. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision.

CHAPTER VI.—NEW STATES.

121. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

122. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

123. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

124. A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

CHAPTER VII.—MISCELLANEOUS.

125. The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney.

Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor.

The Parliament shall sit at Melbourne until it meet at the Seat of Government.

126. The Queen may authorize the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth, and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies, subject to any limitations expressed or directions given by the Queen; but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

127. In reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.

CHAPTER VIII.—ALTERATION OF THE CONSTITUTION.

128. This Constitution shall not be altered except in the following manner:—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails.

And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

SCHEDULE.

OATH.

I, *A.B.*, do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. SO HELP ME GOD!

AFFIRMATION.

I, *A.B.*, do solemnly and sincerely affirm and declare that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law.

(NOTE.—*The name of the King or Queen of the United Kingdom of Great Britain and Ireland for the time being is to be substituted from time to time.*)

3. **The Royal Proclamation.**—The preceding Act received the Royal assent on the 9th July, 1900. This made it lawful to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on the 17th September, 1900, constituted the Commonwealth as from the 1st January, 1901; it read as follows:—

BY THE QUEEN.
A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign, intituled "An Act to constitute the Commonwealth of *Australia*," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One year after the passing of this Act, the people of *New South Wales, Victoria, South Australia, Queensland, and Tasmania*, and also, if Her Majesty is satisfied that the people of *Western Australia* have agreed thereto, of *Western Australia*, shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

And whereas We are satisfied that the people of *Western Australia* have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of *January* One thousand nine hundred and one, the people of *New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia* shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

Given at Our Court at *Balmoral* this Seventeenth day of *September*, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

§ 7. The External Territories of Australia.

1. **Transfer of Norfolk Island.**—In 1856, Norfolk Island was created a distinct and separate settlement under the jurisdiction of New South Wales. Later, in 1896, it was made a dependency under the Governor of that colony and finally by the passage of the Norfolk Island Act 1913 it was accepted as a Territory of the Commonwealth of Australia. The island is situated in latitude 29° 3' 3" S., longitude 167° 57' 5" E., and comprises an area of 8,528 acres.

2. **Transfer of British New Guinea or Papua.**—Under the administration of the Commonwealth, but not included in it, is British New Guinea or Papua, finally annexed by the British Government in 1884. This Territory was for a number of years administered by the Queensland Government, but was transferred to the Commonwealth by proclamation on 1st September, 1906, under the authority of the Papua Act (Commonwealth) of 16th November, 1905. The area of Papua is about 90,540 square miles.

3. **Territory of New Guinea.**—In 1919, it was agreed by the Principal Allied and Associated Powers that a mandate should be conferred on Australia for the government of the former German territories and islands situated in latitude between the Equator and 8° S., and in longitude between 141° E. and 159° 25' E. The mandate was issued

by the League of Nations on 17th December, 1920. The Governor-General of the Commonwealth was authorized to accept the mandate by the New Guinea Act 1920, which also declared the area to be a Territory under the authority of the Commonwealth by the name of the Territory of New Guinea. The Territory comprises about 93,000 square miles, and the administration under the mandate dated from 9th May, 1921. New Guinea is now administered under a Trusteeship Agreement with the United Nations, approved 13th December, 1946.

4. **Nauru.**—In 1919, the Governments of the United Kingdom, Australia and New Zealand entered into an agreement to make provision for the exercise of the mandate conferred on the British Empire for the administration of the island of Nauru, and for the mining of the phosphate deposits thereon. The island is situated in latitude $0^{\circ} 32'$ south of the Equator and longitude $166^{\circ} 55'$ east of Greenwich, and comprises about 5,263 acres. The agreement provided that the administration of the island should be vested in an administrator, the first appointment to be made by the Commonwealth Government, and thereafter in such manner as the three Governments decided. The agreement was approved by the Commonwealth Parliament in the Nauru Island Agreement Act 1919, and a supplementary agreement of 30th May, 1923, which gave the Government immediately responsible for the administration greater powers of control over the Administrator, was approved in 1932. The administration under the mandate operated from 17th December, 1920, until 1st November, 1947, and so far the administrators have been appointed by the Commonwealth Government. As with the Territory of New Guinea, Nauru is now administered under a Trusteeship Agreement with the United Nations.

5. **Territory of Ashmore and Cartier Islands.**—By Imperial Order in Council, dated 23rd July, 1931, Ashmore Islands, known as Middle, East and West Islands, and Cartier Island, situated in the Indian Ocean off the north-west coast of Australia, were placed under the authority of the Commonwealth. The islands were accepted by the Commonwealth in the Ashmore and Cartier Islands Acceptance Act 1933 under the name of the Territory of Ashmore and Cartier Islands on 10th May, 1934. The Act authorized the Governor of Western Australia to make ordinances having the force of law in and in relation to the Territory. An amendment to the Act in July, 1938, annexed the islands to the Northern Territory, whose laws, ordinances and regulations, wherever applicable, thereupon applied.

6. **Australian Antarctic Territory.**—An Imperial Order in Council of 7th February, 1933, placed under Australian authority "all the islands and territories other than Adélie Land which are situated south of the 60th degree of South Latitude and lying between the 160th degree of East Longitude and the 45th degree of East Longitude."

The Order came into force with a proclamation issued by the Governor-General on 24th August, 1936, after the Commonwealth Parliament had passed the Australian Antarctic Territory Acceptance Act on 13th June, 1933. The boundaries of Adélie Land were definitely fixed by a decree of 1st April, 1938, as latitude 60° S., longitude 136° E. and longitude 142° E.

7. **Territory of Heard and McDonald Islands.**—Heard and McDonald Islands, about 2,500 miles south-west of Fremantle, were transferred from United Kingdom to Australian control as from 26th December, 1947.

8. **Territory of Cocos (Keeling) Islands.**—The Cocos (Keeling) Islands Act 1955 provided for the acceptance of the Cocos Islands, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia and was parallel to an Act of the United Kingdom Parliament transferring authority over the islands to the Commonwealth. Consequent on the passing of these Acts Her Majesty, by Order in Council, specified 23rd November, 1955, as the date of transfer. From that date the islands came under Australian administration and an Official Representative of Australia was appointed to take charge of the local administration of the islands.

9. **Territory of Christmas Island.**—The Christmas Island Act 1958 provided for the acceptance of Christmas Island, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia. Complementary legislation having been passed by the Parliament of the United Kingdom, the island was transferred to the Australian administration on 1st October, 1958, and an Official Representative was appointed to administer the Territory.

CHAPTER II.

PHYSIOGRAPHY.

§ 1. General Description of Australia.

1. **Geographical Position.**—(i) *General.* The Australian Commonwealth, which includes the island continent of Australia proper and the island of Tasmania, is situated in the Southern Hemisphere, and comprises in all an area of about 2,971,081 square miles, the mainland alone containing about 2,944,866 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes $113^{\circ} 9' \text{ E.}$ and $153^{\circ} 39' \text{ E.}$, while its northern and southern limits are the parallels of latitude $10^{\circ} 41' \text{ S.}$ and $43^{\circ} 39' \text{ S.}$, or, excluding Tasmania, $39^{\circ} 8' \text{ S.}$ On its north are the Timor and Arafura Seas and Torres Strait, on its south the Southern Ocean. The extreme points are Steep Point on the west, Cape Byron on the East, Cape York on the north, and South-East Cape or, if Tasmania be excluded, Wilson's Promotory, on the south.

(ii) *Tropical and Temperate Regions.* Of the total area of Australia, nearly 39 per cent. lies within the tropics. Assuming, as is usual, that the latitude of the Tropic of Capricorn is $23^{\circ} 30' \text{ S.}$, the areas within the tropical and temperate zones are approximately as follows:—

AUSTRALIA: AREAS OF TROPICAL AND TEMPERATE REGIONS.

(Square miles.)

Area.	N.S.W. (a)	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	N. Terr.	Total.
Within Tropical Zone ..	310,372	87,884	360,642	380,070	364,000	26,215	426,320	1,150,962
„ Temperate Zone ..	310,372	87,884	306,358	380,070	611,920	26,215	97,300	1,820,119
Total Area ..	310,372	87,884	667,000	380,070	975,920	26,215	523,620	2,971,081

(a) Includes Australian Capital Territory (939 square miles).

Fifty-four per cent. of Queensland lies within the tropical zone and 46 per cent. in the temperate zone; 37 per cent. of Western Australia is tropical and 63 per cent. temperate; while 81 per cent. of the Northern Territory is tropical and 19 per cent. temperate. All of the remaining States lie within the temperate zone. The tropical part of Australia thus comprises about 39 per cent. of the whole of the continent.

2. **Area of Australia compared with Areas of other Countries.**—The area of Australia is almost as great as that of the United States of America, four-fifths of that of Canada, nearly three-quarters of the whole area of Europe, and about 25 times that of Great Britain and Ireland. The areas of Australia and of certain other countries are shown in the table on the following page.

AREA OF AUSTRALIA AND OF OTHER COUNTRIES, *circa* 1957.

('000 square miles.)

Country.	Area.	Country.	Area.

Libya	679		

(*a*) Excludes U.S.S.R., shown below.
(*d*) Australian Trust Territory.(*b*) Includes British Cameroons.(*c*) Includes Alaska.

The areas shown in the table are obtained from the *Demographic Yearbook*, 1958, published by the Statistical Office of the United Nations and the countries have been arranged in accordance with the continental groups used therein.

3. Areas of States and Territories, Coastal Configuration and Standard Times.—As already stated, Australia consists of six States and the Northern and Australian Capital Territories. Particulars of areas, coastline and standard times are shown in the following table:—

AUSTRALIA: AREAS OF STATES AND TERRITORIES, COASTLINE AND STANDARD TIMES.

State or Territory.	Area.	Proportion of Total Area.	Coastline.	Area per Mile of Coastline.	Standard Times.	
					Meridian Selected.	Ahead of G.M.T.
	Sq. miles.	%	Miles.	Sq. miles.		Hours.
New South Wales ..	309,433	10.42	(a) 700	(a) 443	150° E.	10

Australia ..	2,971,081	100.00	12,210	243

(a) Includes Australian Capital Territory.

There are few striking features in the configuration of the coast; the most remarkable indentations are the Gulf of Carpentaria on the north and the Great Australian Bight on the south. The Cape York Peninsula on the extreme north is the only other remarkable feature in the outline. In Official Year Book No. 1, an enumeration was given of the features of the coastline of Australia (*see pp. 60–68*).

Prior to 1895, the official time adopted in the several colonies was for most purposes the mean solar time of the capital city of each. In 1894 and 1895, after several conferences had been held, legislation was enacted by each of the colonies whereby the mean solar times of the meridians of east longitude 120° (Western Australia), 135° (South Australia and Northern Territory) and 150° (Queensland, New South Wales, Victoria and Tasmania) were adopted. In 1898, however, the South Australian legislature amended its earlier provision and adopted the mean solar time of the meridian 142° 30' E. longitude as the standard time for that colony (and the Northern Territory). For further information on this subject, *see* Official Year Book No. 39, page 65.

4. Geographical Features of Australia.—(i) *General*. The following description is only a broad summarization of the main physical characteristics of the Australian continent. For greater detail of particular geographical elements, earlier issues of the Official Year Book should be consulted. The list of special articles, etc., at the end of this volume indicates the nature of the information available and its position in the various issues.

(ii) *Orography of Australia*. (a) *General Description of the Surface*. Owing to the absence of any very high mountain chains, and to the great depression in the centre of Australia, the average elevation of the Australian continent above the level of the surrounding oceans is less than that of any of the other continents. Three-quarters of the land-mass lies between the 600 and 1,500 feet contours in the form of a huge plateau.

A section through the continent from east to west, at the point of its greatest breadth, shows first a narrow belt of coastal plain. This plain, extending north and south along the whole eastern coast, is well watered by rivers. It is of variable width, seldom more than sixty or seventy miles, and occasionally only a few miles, the average being roughly about forty to fifty miles. From this plain, the Great Dividing Range, extending from the north of Queensland to the south of New South Wales, and thence sweeping westward through Victoria, rises, often abruptly, and frequently presents bold escarpments on its eastern face. The descent on its western slopes is gradual, until, in the country to the north of Spencer's Gulf, the plain is not above sea-level and occasionally even below it. Thence there is another almost imperceptible rise until the mountain ranges of Western Australia are reached, and beyond these lies another coastal plain.

The great central plain or plateau is the most distinctive feature of the Australian continent and its climatic peculiarities can probably be largely ascribed thereto.

(b) *Mountain Systems.* The main mountain feature of Australia is the Great Dividing Range, which runs along the whole eastern coast of the continent and can be traced over the islands of Torres Strait to New Guinea, while in the south, one branch sweeps westwards towards the boundary of Victoria and South Australia, and the other, the main branch, terminates in Tasmania.

This mountain system is at no place more than 250 miles from the eastern coastline and it approaches to less than 30 miles. On the whole, it is much closer to the coast in both New South Wales and Victoria than it is in Queensland, the corresponding average distances being about 70, 65 and 130 miles respectively. There is no connexion between the mountains of the eastern and other States of Australia.

The mountains of Australia are relatively low. Thus, in Queensland, the Great Dividing Range reaches a height above sea-level of less than 5,500 feet, the highest peak being Mount Bartle Frere. Mount Kosciusko, in New South Wales, is only about 7,300 feet, and Mount Bogong, in Victoria, about 6,500 feet high. In South Australia and Western Australia, heights of three to five thousand feet are attained. In Tasmania, the greatest height is only a little more than 5,000 feet. The fact that there are no high mountains in Australia is also of considerable importance in considering the climate of Australia.

It may be of interest to observe that at one time Tasmania was probably connected with the mainland. As the Great Dividing Range can, in the north, be traced from Cape York across Torres Strait to New Guinea, so its main axis can be similarly followed across the shallow waters of Bass Strait and its islands from Wilson's Promontory to Tasmania, which may be said to be completely occupied by ramifications of the chain. The central part of the island is occupied by an elevated plateau, roughly triangular in shape, and presenting bold fronts to the east, west and north. This does not extend in any direction more than about 60 miles. The plateau rests upon a more extensive tableland, the contour of which closely follows the coastline, and occasionally broadens out into low-lying tracts not much above sea-level. The extreme south of the island is rugged in character.

(iii) *Hydrology of Australia.* (a) *Rainfall.* On the whole, Australia is a country with a limited rainfall. This is immediately evident on studying its river systems, its lakes, and its artesian areas. Its one large river system is that of the Murray and Darling Rivers, of which the former stream is the larger and more important. Many of the rivers of the interior run only after heavy rains. Depending almost entirely on rainfall, a consequence of the absence of high mountains, they drain large areas with widely varying relation as between rainfall and flow. Thus it has been estimated that not more than 10 per cent. of the rainfall on the catchment area of the Darling River above Bourke (New South Wales) discharges itself past that town. The rate of fall is often very slight.

(b) *Rivers.* The rivers of Australia may be divided into two major classes, those of the coastal plains with moderate rates of fall; and those of the central plains with very slight fall. Of the former, not many are navigable for any distance from their mouths and bars make many of them difficult of access or inaccessible from the sea.

The two longest rivers of the northern part of the eastern coast are the Burdekin, discharging into Upstart Bay, with a catchment area of 53,500 square miles, and the Fitzroy, which reaches the sea at Keppel Bay and drains about 55,600 square miles.

The Hunter is the largest coastal river of New South Wales, draining about 11,000 square miles before it reaches the sea at Newcastle. The Murray River, with its great tributary the Darling, drains a considerable part of Queensland, the major part of New South Wales and a large part of Victoria. It debouches into the arm of the sea known as Lake Alexandrina, on the eastern side of the South Australian coast. The total length of the Murray is about 1,600 miles, 400 being in South Australia and 1,200 constituting the boundary between New South Wales and Victoria. The total length of the Murray-Darling from the source of the Darling to the mouth of the Murray is about 2,300 miles. In good seasons, the river is navigable for a considerable proportion of its length.

The rivers of the north-west coast of Australia (Western Australia) are of considerable size, e.g., the Murchison, Gascoyne, Ashburton, Fortesque, De Grey, Fitzroy, Drysdale and Ord. So also are those in the Northern Territory, e.g., the Victoria and Daly. The former of these, estimated to drain 90,000 square miles, is said to be navigable for 50 miles.

The rivers on the Queensland side of the Gulf of Carpentaria, such as the Gregory, Leichhardt, Cloncurry, Gilbert and Mitchell, are also of considerable size.

Owing to the small amount of fall of many of the interior rivers, they may flood hundreds of miles of country in wet seasons, while in dry seasons they form a mere succession of waterholes or are entirely dry. It is this fact that explains the apparently conflicting reports of the early explorers, one regarding the interior as an inland sea, and another as a desert.

The rivers of Tasmania have short and rapid courses, as might be expected from the configuration of the territory.

(c) *Lakes.* The "lakes" of Australia may be divided into three classes, true permanent lakes; lakes which, being very shallow, become mere morasses in dry seasons or even dry up and finally present a cracked surface of salt and dry mud; and lakes which are really inlets of the ocean, opening out into a lake-like expanse.

The second class is the only one which seems to demand special mention. These are a characteristic of the great central plain of Australia. Some of them, such as Lakes Torrens, Gairdner, Eyre and Frome, are of considerable extent.

(d) *Artesian Areas.* A considerable tract of the plain country of New South Wales and Queensland carries a water-bearing stratum, usually at a great depth. A large number of artesian bores have been put down, from which there is a considerable flow. These are of great value and render usable large areas which otherwise would be difficult to occupy even for pastoral purposes.

For further information on this subject, see Chapter VIII.—Water Conservation and Irrigation.

5. *Fauna, Flora, Geology and Seismology of Australia.*—Special articles dealing with these features have appeared in previous issues of the Official Year Book, but limits of space preclude their repetition in each volume. The nature and location of these articles can be readily ascertained from the special index preceding the general index at the end of this volume.

§ 2. Climate and Meteorology of Australia,

NOTE.—This Section has been prepared by the Director of the Commonwealth Bureau of Meteorology, and the various States and Territories have been arranged in the standard order adopted by that Bureau.

1. *Introductory.*—Previous issues of the Official Year Book, notably No. 3, pages 79–83, and No. 4, pages 84 and 87, contained outlines of the history of Australian meteorology and the creation and organization of the Commonwealth Bureau of Meteorology. Official Year Book No. 38, pages 30–32, contained paragraphs devoted to (i) Organization of the Meteorological Service; (ii) Meteorological Publications; (iii) Equipment; and (iv) Meteorological Divisions.

By reasons of its insular geographical position and the absence of striking physical features, whether in marine gulfs or in important mountains, Australia is, on the whole, less subject to extremes of weather than are regions of similar area in other parts of the globe, and latitude for latitude Australia is generally more temperate.

The average elevation of the surface of the land is low, probably close to 900 feet above the sea. The altitudes range up to a little more than 7,300 feet, hence the Australian climate displays a great many features, from the characteristically tropical to what is essentially alpine, a fact indicated in some measure by the name Australian Alps given to the southern portion of the Great Dividing Range.

On the coast, the rainfall is often abundant and the atmosphere moist, but in some portions of the interior it is very limited, and the atmosphere dry. The distribution of forest, therefore, with its climatic influence, is very uneven. In the interior, in places, there are fine belts of trees, but there are also large areas which are treeless, and here the air is hot and parching in summer. Again, on the coast, even so far south as latitude 35°, the vegetation is tropical in its luxuriance, and to some extent also in character.

2. *Temperature.*—(i) *Effective Temperature.* When a meteorologist speaks of temperature, he means the temperature of the air indicated by a thermometer sheltered from precipitation, from direct rays of the sun and from radiation of heat from the ground

and neighbouring objects, yet freely exposed to the circulation of the air. In other words, he means temperature measured under conditions standardized as nearly as possible in a Stevenson Screen, which is the standard housing for meteorological thermometers.

This shade temperature as measured by a "dry bulb" thermometer shows only the actual temperature experienced by dry inorganic substances, not the *sensible* temperatures felt by organic bodies. In the case of human beings, *sensible* temperature is affected by the rate of conduction of heat to or from the body by moving air and also by the rate of cooling due to evaporation from the skin and respiratory passages. The wind and humidity therefore determine the *sensible* temperature.

The humidity (relative humidity) is determined from the readings of the dry and wet bulb thermometers. Of late years, however, with increasing interest in human comfort in tropical climates, another term, *effective* temperature, has come into use. It may be defined as "the temperature of a still, saturated atmosphere which would on the average produce the same feeling of warmth or cold as the atmosphere in question".*

The 80° F. isotherm is confined to a very narrow tract of country on the north-west coast of Western Australia. The 75° F. isotherm extends, broadly, from Onslow on the north-west coast of Western Australia to Daly Waters to Camooweal to Moreton in Cape York Peninsula following in a general way the coastline of Northern Australia but from 100 to 300 miles inland.

Later investigations have established "comfort zones"† bounded by limits of effective temperature within which people will feel comfortable. American research workers have determined the following figures‡:—

COMFORT ZONES: EFFECTIVE TEMPERATURES.

Season.			No subjects feel comfortable below—	Fifty per cent. of subjects feel comfortable between—	No subjects feel comfortable above—
Winter..	60° F.	63° and 71° F.	74° F.
Summer	64° F.	66° and 75° F.	79° F.

Queensland investigators§ in recent years have divided some towns of Queensland into three classes on the basis of deviation from comfort:—

Class 1 (Sub-tropics).—Quite suitable for Caucasian habitation—Rockhampton, Bundaberg, Brisbane, Longreach, Charleville.

Class 2 (Marginal tropics).—Suitable for Caucasian habitation, but requires adaptation in summer—Mackay, Townsville.

Class 3 (Tropics).—(a) Permissible for Caucasian habitation but requires selection and marked adaptation—Cardwell, Cairns, Cloncurry. (b) Not suitable for continuous Caucasian habitation—Cape York, Burketown.

These results of recent years bear out investigations made previously in Australia|| in which the atmospheric vapour pressure was used as a measure of comfort, its value for this purpose being that it has equal effect in both indoor and outdoor climates. The limits of comfort range from 0.2 to 0.5 inch of vapour pressure. After drawing isopleths for effective temperature (not corrected for altitude), mean vapour pressure reduced to a logarithmic scale, and mean wet bulb temperature, it is found that there is close agreement in defining zones of relative discomfort.

(ii) *Seasons.* The Australian seasons are:—Summer, December to February; autumn, March to May; winter, June to August; spring, September to November. In most parts of Australia, January is the hottest month, but in Tasmania and southern Victoria, February is the hottest; in the tropical north, probably because the cooling "monsoon" rains occur in late summer, December is the hottest month, and at Darwin, November.

On a rainfall basis, in the tropical north the year is divisible into "wet" and "dry" seasons, but on the basis of temperatures and physical comfort the "dry" season can be further sub-divided into two parts—"cool dry" and "warm dusty".¶

(a) "*Cool dry*" Season. From May to August. The average maximum temperature ranges from 80° to 85° F., the relative humidity is low and in inland areas cold nights are experienced when the temperature drops to 40° F. The skies generally are cloudless, but in about one year in three during June or July one to two inches of rain fall.

* Houghton, F. C., Teague, W. W. and Miller, W. E. (1926) Amer. Soc. Heat Vent. Engrs. † Yaglou, C. P. (1926) J. Industr. Hyg. ‡ Yaglou, C. P. (1927) Ibid. § Lee, D. H. K. Trans. Roy. Soc. Trop. Med. and Hyg. (1940) Vol. XXXII. ¶ Barkley, H. Zones of Relative Physical Comfort in Australia, Met. Bull. 20, 1934. || Maze, W. H. Austr. Geog., June, 1945. Settlement in E. Kimberleys.

(b) "*Warm dusty*" Season. From the end of August, temperatures rise and reach a maximum in October or the beginning of November. Temperatures of over 120°F. have been recorded.

(c) "*Wet*" Season. After the first of the heavy storms, the maximum temperatures fall but still remain high with high relative humidity. At Wyndham during January, 1944, the minimum temperature did not drop below 75°F. for fourteen consecutive days. A maximum of over 100°F. was recorded on each rainless day.

In Central and Northern Australia, during the hottest months, the average temperatures range from 80° to 85° F., whereas in Southern Australia they vary from 65° to 70° F. (see maps pp. 33, 34).

Throughout Australia, the coldest month is July, when only a very narrow strip of the northern sea-board has an average temperature as high as 75° F. Over the southern half of the continent, July temperatures range from 55° to 45° F. at elevations below 1,500 feet and fall as low as 35° on the Australian Alps (see maps pp. 35, 36). Here the temperature seldom, if ever, reaches 100° F. even in the hottest of seasons. Hotham Heights (6,100 feet above Mean Sea Level) recorded the highest maximum of 82.0° F. on 20th January, 1935. In winter, readings slightly below zero are occasionally recorded on the extreme heights.

Tasmania, as a whole, enjoys a moderate and equable range of temperature throughout the year, although occasionally hot winds may cause the temperature to rise to 100° F. in the eastern part of the State.

(iii) *Comparisons with other Countries.* In respect of Australian temperatures generally, it may be pointed out that the mean annual isotherm for 70° F. extends in South America and South Africa as far south as latitude 33° S., while in Australia it reaches only as far south as latitude 30° S., thus showing that, on the whole, Australia has, latitude for latitude, a more temperate climate than other places in the Southern Hemisphere.

The comparison is even more favourable when the Northern Hemisphere is included, for in the United States of America the 70° F. isotherm extends in several of the western States as far north as latitude 41° N. In Europe, the same isotherm reaches almost to the southern shores of Spain, passing afterwards, however, along the northern shores of Africa till it reaches the Red Sea, when it bends northward along the eastern shore of the Mediterranean till it reaches Syria. In Asia, nearly the whole of the land area south of latitude 40° N. has a mean annual temperature higher than 70° F.

The extreme range of temperature is less than 100° F. over practically the whole of Australia, that figure being only slightly exceeded at a very few places; it is mostly 70° to 90° F. over inland areas, and somewhat less on the coast. In parts of Asia and North America, the extreme range exceeds 130° and 150° F. in some localities.

Along the northern shores of Australia, the temperatures are very equable. At Darwin, for example, the difference in the means for the hottest and coldest month is only 8.4° F., and the extreme readings, or the highest maximum on record and the lowest minimum, show a difference of under 50° F.

The highest temperature recorded in Australia was 127.5° F. at Cloncurry on 16th January, 1889. The world's highest (136° F.) was recorded at Azizia (Tripoli) on 13th August, 1922. The lowest temperature ever recorded in Australia was -8° F. at Charlotte Pass on 14th June, 1945, and again on 22nd July, 1947, as contrasted with the world's lowest recorded temperature, apart from the polar regions, of -90° F. at Verkhoyansk (Siberia) on 5th and 7th February, 1892.

A comparison of the mean temperatures and the range from the extreme maximum to the extreme minimum temperatures (in whole degrees) of the capital cities of Australia with those of the main cities of some other countries is presented in tabular form in Official Year Book No. 38, page 42.

(iv) *Hottest and Coldest Parts.* A comparison of the temperatures recorded at coast and inland stations shows that in Australia, as in other continents, the range increases, within certain limits, with increasing distance from the coast.

In the interior of Australia, and during exceptionally dry summers, the temperature occasionally reaches or exceeds 120° F. in the shade. The hottest area of the continent is situated in the northern part of Western Australia about the Marble Bar and Nullagine goldfields, where the maximum shade temperature during the summer sometimes exceeds 100° F. continuously for days and weeks. The longest recorded period was 160 days from 31st October, 1923, to 7th April, 1924.

The area affected and the period of duration of the longest heat waves in Australia are shown in the map and diagram on page 37.

(v) *Tabulated Data for Selected Climatological Stations in Australia.* Tables showing normal mean temperature, extreme temperatures and normal rainfall for each month for

selected climatological stations in each State and the Northern Territory appear in Official Year Book No. 40, pages 16–23, and similar data for other selected stations in the Commonwealth in Official Year Book No. 39, pages 41–48. Pages 53–60 of this issue contain this information in respect of Canberra, Darwin and the six State capitals.

(vi) *Frosts*.* The Observer's Handbook of the Meteorological Office, London, gives the following definition:—"Injury to the tissues of growing plants is not caused until the temperature has fallen considerably below the freezing point of water (32° F.) and a 'ground frost' is regarded as having occurred when the thermometer on the grass has fallen to 30.4° F. or below".

In Australia, this definition is adopted for stations equipped with terrestrial minimum thermometers. However, these are few in number, so although many rainfall observers record "hoar frost" when seen, for statistical purposes a screen temperature of 36° F. is taken as indicating light frosts at ground level. For heavy frosts, a screen temperature of 32° F. is taken.

In America, a "killing" frost is defined as a frost "that is generally destructive of vegetation". A "black frost" is the phenomenon arising out of a combination of low temperature and low humidity causing rupturing of plant cells by expansion, when freezing takes place, of the water which they contain, though frost crystals are not formed on the ground.

The parts of Australia most subject to low temperature are the eastern highlands from about Omeo in Victoria northward to Cambooya and Bybera in Queensland. Most stations in this region experience more than ten nights a month with readings of 32° F. or under for three to five months of the year. In Tasmania, districts on the Central Plateau are subject to such conditions for three to six months of the year. Minimum temperatures of 32° F. are comparatively infrequent in Western Australia except in parts of the south and south-west. In South Australia, the Yongala district is much more subject to such temperatures than other parts of the State. Much of the south-east of Queensland has a higher frequency of such readings than South Australia. Generally speaking, the frequency is controlled mainly by altitude, latitude and, to a lesser degree, by proximity to the sea.

Frosts may occur within a few miles of the coastline over the whole continent, except in the Northern Territory and a considerable area of Northern Queensland. Regions subject to frost in all months of the year comprise portions of the tablelands of New South Wales, the Eastern Highlands and parts of the Central Divide and Western District in Victoria, practically the whole of Tasmania and a small area in the south-west of Western Australia.

A map showing the average annual number of frost-free days (i.e., days on which the temperature does not fall below 36° F.) appears on page 39.

Over most of the interior of the continent, and on the Highlands in Queensland as far north as the Atherton Plateau, frosts appear in April and end in September, but they are infrequent in these months. Minimum temperatures of 32° F. are experienced in most of the sub-tropical interior in June and July.

3. Humidity.—After temperature, humidity is the most important element of climate, particularly as regards its effects on human comfort, rainfall supply and conservation and related problems.

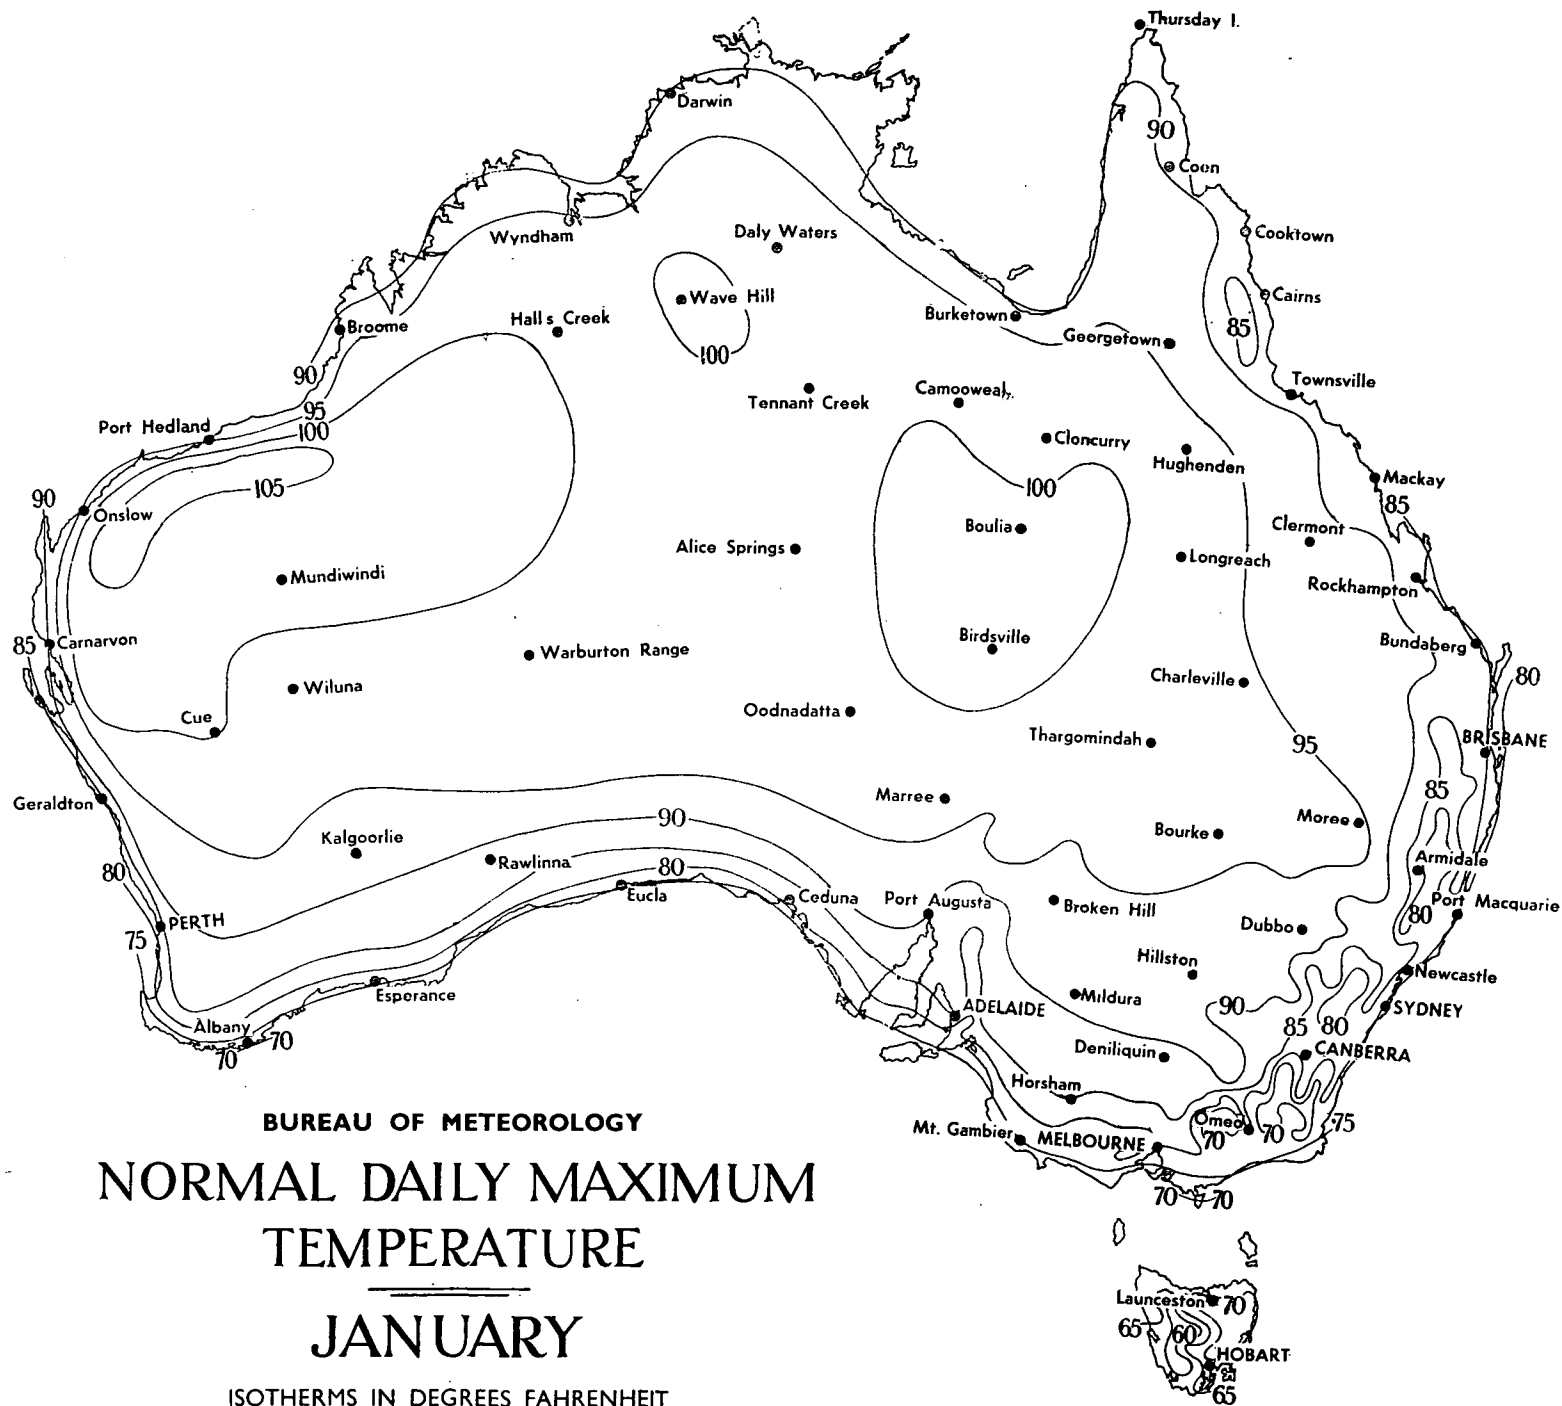

"Vapour pressure" is the pressure exerted by the water vapour in the atmosphere. At any given temperature there is a definite upper limit to the amount of water that can exist as vapour in the atmosphere. When this limit is reached, the air is said to be saturated and the pressure of the water vapour is equal to the "saturation vapour pressure".

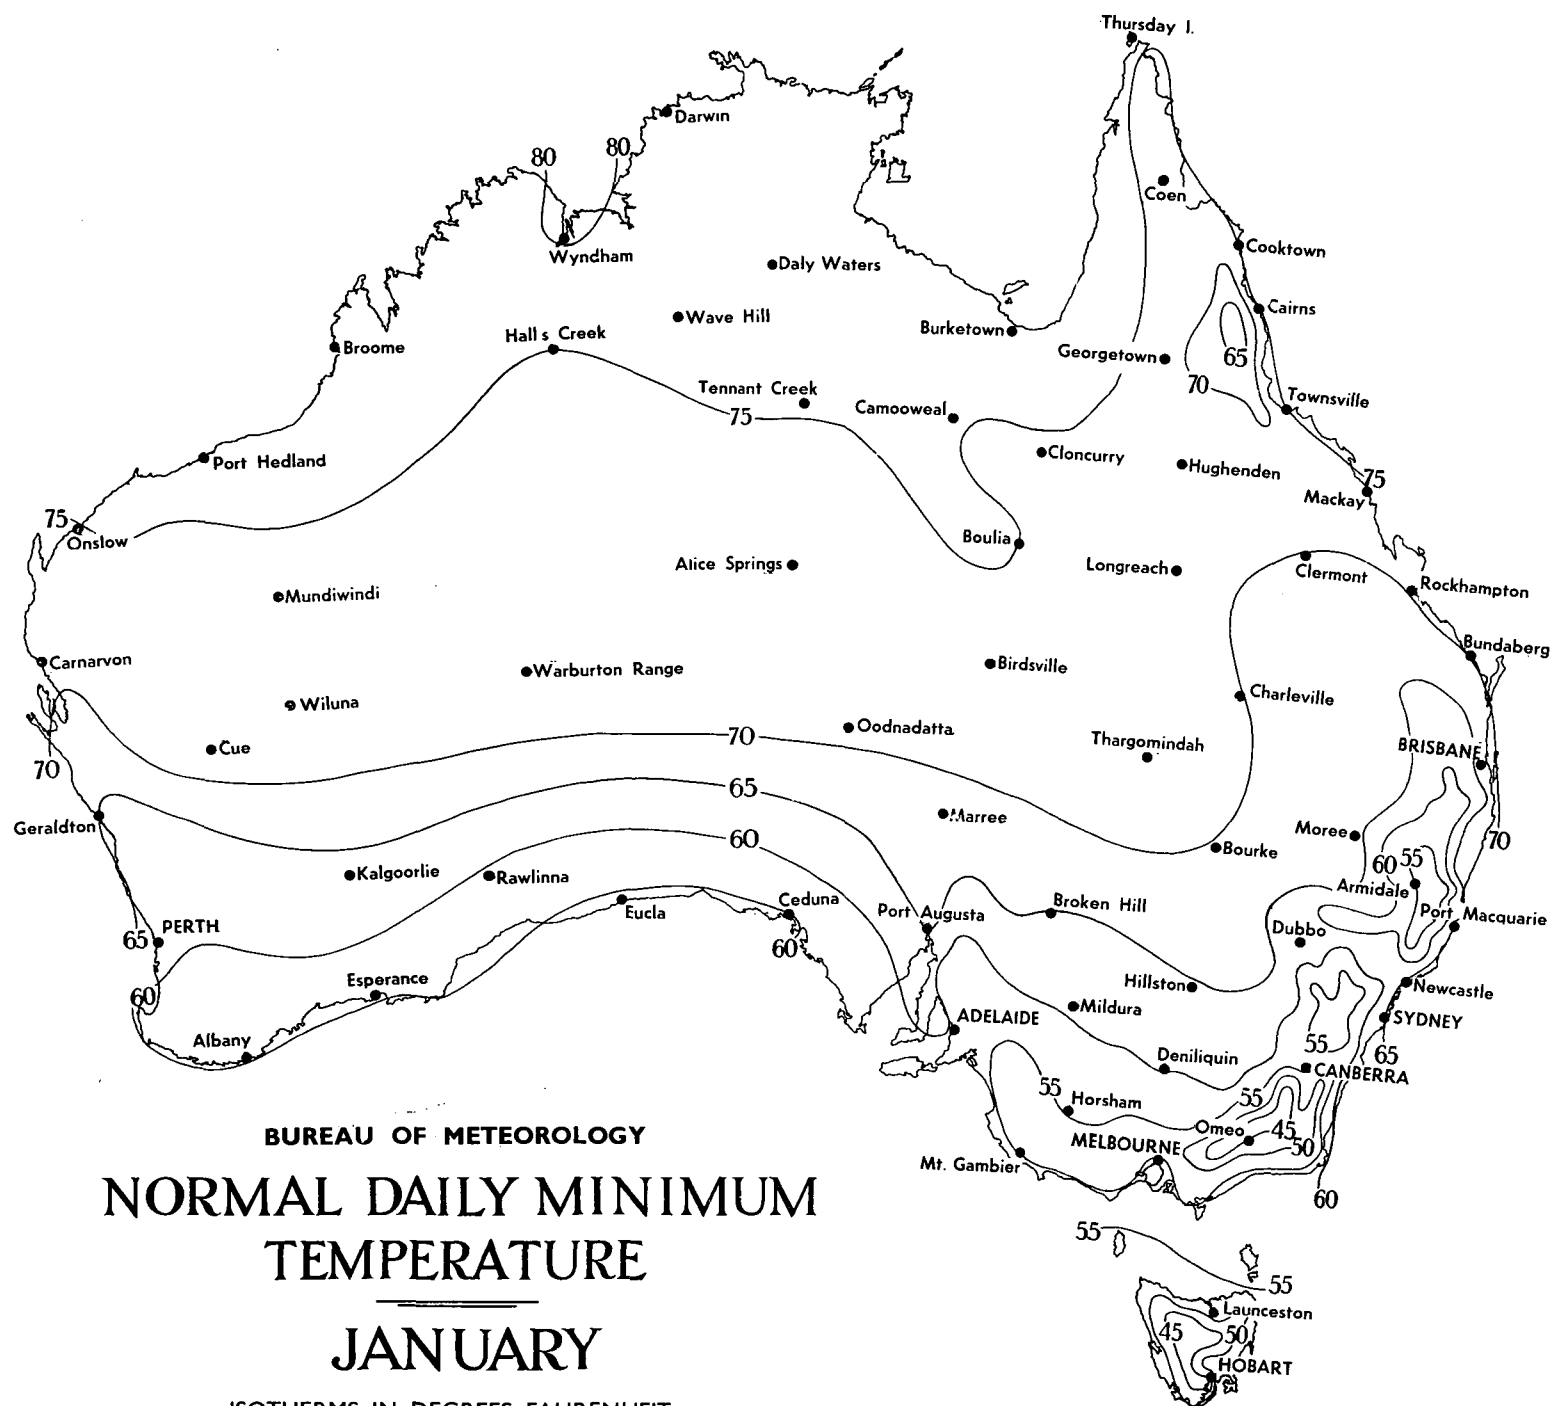

In this publication, the humidity of the air has been expressed by the relative humidity, which is the quotient of the vapour pressure divided by the saturation vapour pressure and multiplied by one hundred. The mean 9 a.m. relative humidity, as well as its highest and lowest recorded mean values at 9 a.m., are shown in the tables of climatological data for the capital cities (see pp. 53–60). The mean monthly vapour pressure has also been added to these tables.

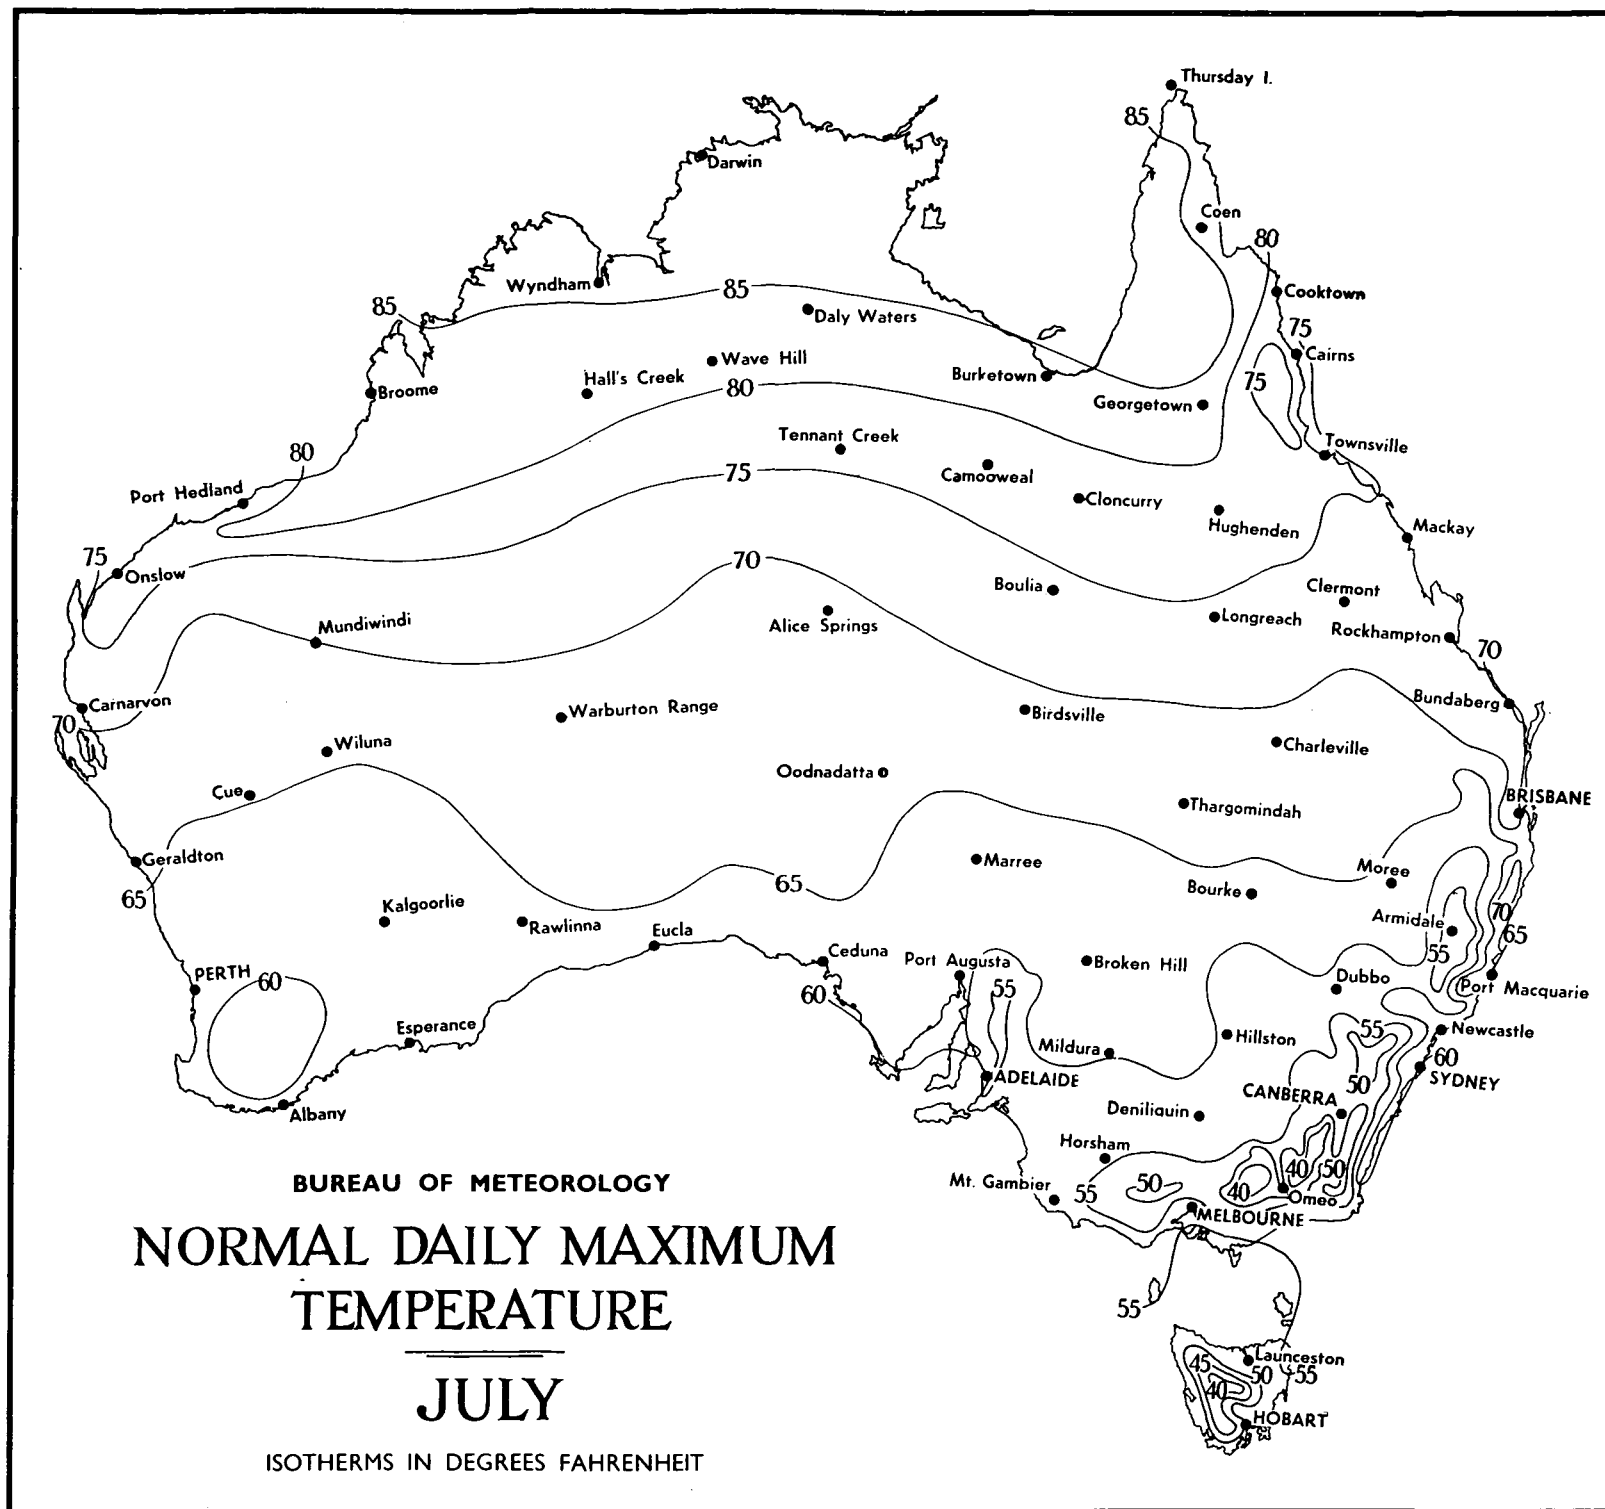

The annual curve of vapour pressure derived from the normal monthly values for this element is comparable with the maximum and minimum temperature curves, but the relative humidities, consisting as they do of the extremes for each month, do not show the normal annual fluctuation which would be approximately midway between the extremes.

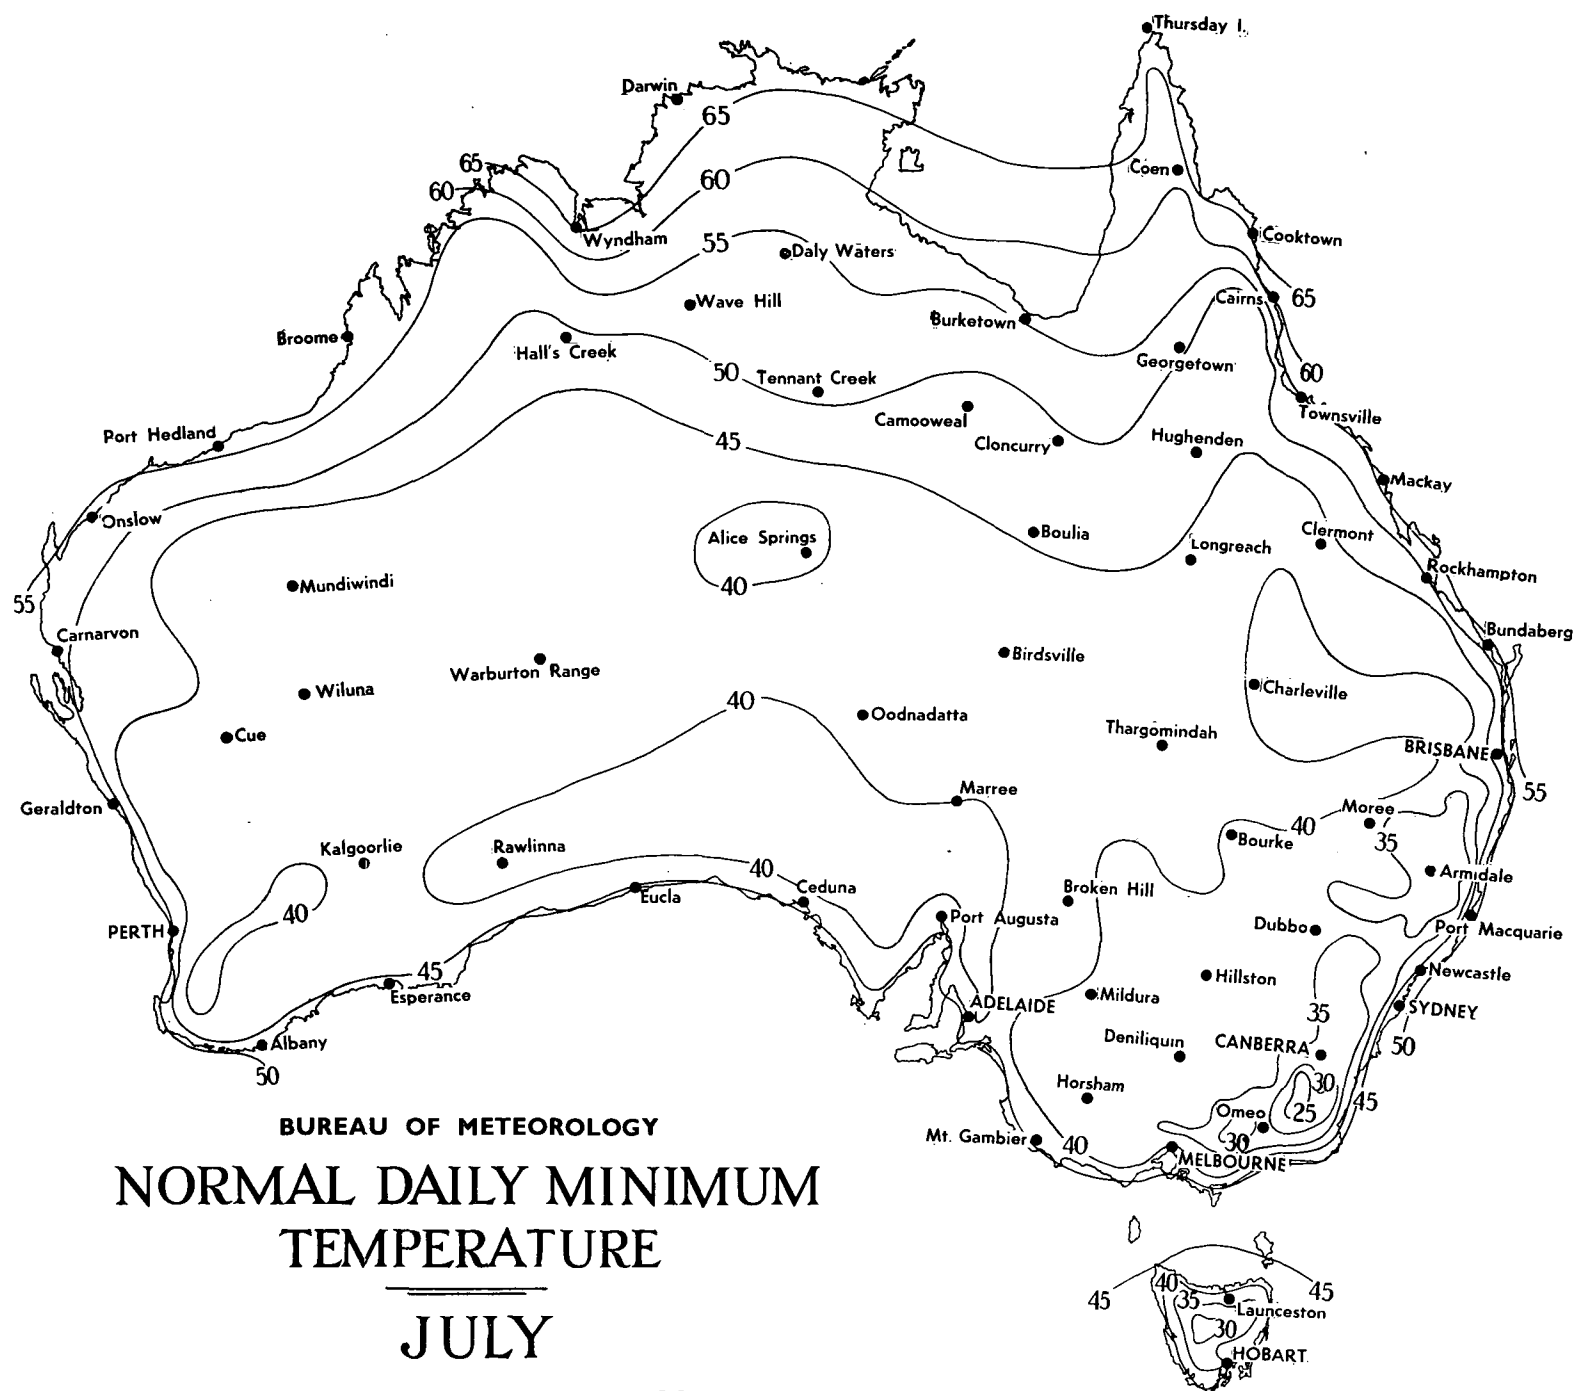

The order of stations in descending values of 9 a.m. vapour pressure is Darwin, Brisbane, Sydney, Perth, Melbourne, Adelaide, Canberra, Hobart and Alice Springs, while the relative humidity at 9 a.m. diminishes in the order, Melbourne, Sydney, Darwin, Brisbane, Canberra, Hobart, Perth, Adelaide and Alice Springs.

Further reference to humidity will be found in the section on effective temperature (*see p. 29*).

4. *Evaporation.*—(i) *General.* The rate and quantity of evaporation in any territory is influenced by the prevailing temperature, and by atmospheric humidity, pressure and wind movement. In Australia, the question is of great importance, since in its drier regions water has often to be conserved in tanks and dams. The magnitude of the economic loss by evaporation will be appreciated from the map reproduced herein (*see p. 40*), which shows that the yearly amount varies from about 20 inches over western Tasmania to more than 100 inches over the central and north-western parts of Australia. Over an area of 70 per cent. of the continent, comprising most inland districts and extending to the coast in the North-West and the Eucla divisions of Western Australia, the rainfall does not exceed the evaporation during any month of the year. The central and north-western portions of the continent, comprising 46 per cent. of the total land mass, experience evaporation more than twice as great as their rainfall; it is noteworthy that the vegetation over most of this region is characterized by acacia, semi-desert, shrub steppe and porcupine grass. Since the loss by evaporation depends largely on the exposed area, tanks and dams so designed that the surface shall be a minimum are advantageous. Further, the more they are protected from the direct rays of the sun and from winds by means of suitable tree planting the less will be the loss by evaporation. The Mansfield Process for treatment of tanks, dams and ponds by hexadecanol film, materially reducing effective evaporation, is a recent development which is already having beneficial results. These matters are naturally of more than ordinary concern in the drier districts of Australia.

(ii) *Comments on Map of Average Annual Evaporation.* The map of average annual evaporation in Australia (*see p. 40*) has been compiled on the basis of records obtained from a number of evaporimeters supplemented by estimates derived from records of saturation deficit by applying the Waite Institute factor of 263.* Some modification of the latter values was found to be necessary in comparison with recordings of evaporimeters.

The standard evaporation tank used in Australia is cylindrical in form and is 36 inches in diameter and 36 inches deep. It is surrounded by a 6-inch water jacket and the whole is sunk into the ground so that the water surface is approximately at ground level.

Saturation deficit is obtained from readings of dry and wet bulb thermometers exposed in a standard Stevenson thermometer shelter. Saturation deficit is the difference between the vapour pressure indicated by the dry and wet bulb readings, and the saturation vapour pressure corresponding to the dry bulb temperature.

The Waite formula, $e=263$ s.d., is not an exact relationship, but it takes account of one of the major factors in evaporation, namely, the difference between saturation vapour pressures at the mean dew point and at the mean air temperature. Errors in the formula are found to be fairly consistent in considerable areas of Australia and corrections have been applied accordingly. No evaporation records are available north of latitude 20°, and corrections have been extrapolated for these areas. The evaporation stations on which estimates for the tropics have been based are Alice Springs (Northern Territory) and Winton (Queensland), and to a lesser degree Blackall (Queensland) and Marble Bar (Western Australia).

The map thus presents an estimate of evaporation for which allowance should be made for a certain margin of error (perhaps 10 per cent. or so) on the conservative side. In the absence of definite information, such a map should serve a useful purpose as a basis for many climatic studies.

For graphs and tables of mean monthly evaporation and rainfall at certain selected stations, *see Official Year Book No. 37*, pages 34–35.

5. *Rainfall.*—(i) *General.* The rainfall of any region is determined mainly by the direction and route of the prevailing winds, by the varying temperatures of the earth's surface over which they blow, and by its physiological features.

Australia lies within the zones of the south-east trades and "prevailing" westerly winds. The southern limit of the south-east trades strikes the eastern shores at about 30° south latitude and the heaviest rains of the Australian continent with very few exceptions, are precipitated along the Pacific slopes to the north of that latitude, the varying quantities being more or less regulated by the differences in elevation of the shores and of the chain of mountains from the New South Wales northern border to Thursday Island,

* Prescott, J. A. "Atmospheric Saturation Deficit in Australia" (Trans. Royal Society, S.A. Vol. LV., 1931).

upon which the rain-laden winds blow. The converse effect is exemplified on the north-west coast of Western Australia, where the prevailing winds, blowing from the interior of the continent instead of from the ocean, result in the lightest coastal rain in Australia.

The westerly winds, which skirt the southern shores, are responsible for the reliable, generally light to moderate rains enjoyed by the south-western portion of Western Australia, the agricultural areas of South Australia, a great part of Victoria, and the whole of Tasmania.

(ii) *Distribution of Rainfall.* The average annual rainfall map of Australia (see p. 41) shows that the heaviest yearly falls occur on the north coast of Queensland (up to more than 160 inches) and in western Tasmania (up to 140 inches), while from 50 to over 60 inches are received on parts of the eastern seaboard from Jervis Bay to the northern part of Cape York Peninsula, also around Darwin, on the West Kimberley coast, near Cape Leeuwin, about the Australian Alps in eastern Victoria and New South Wales, and on the north-eastern highlands in Tasmania. A great part of the interior of the continent, stretching from the far west of New South Wales and the south-west of Queensland to the vicinity of Shark Bay in Western Australia, has a very low average rainfall of less than 10 inches a year. Between these two regions of heavy and very low rainfall are the extensive areas which experience useful to good rains, and in the southern and eastern parts of which are found the best country and most of the population and primary production.

(iii) *Factors Determining Occurrence, Intensity and Seasonal Distribution of Rainfall.* Reference has already been made to the frequent rains occurring in the north-eastern coastal districts of Queensland with the prevailing south-east trade winds and to similar rains in the west of Tasmania with the prevailing westerly winds. Other rains in Australia are associated mainly with tropical and southern depressions.

The former chiefly affect the northern, eastern, and to some extent the central parts of the continent and operate in an irregular manner during the warmer half of the year, but principally from December to March. They vary considerably in activity and scope from year to year, occasionally developing into severe storms off the east and north-west coasts. Tropical rainstorms sometimes cover an extensive area, half of the continent on occasions receiving moderate to very heavy falls during a period of a few days. Rain is also experienced, with some regularity, with thunderstorms in tropical areas, especially near the coast. All these tropical rains, however, favour mostly the northern and eastern parts of the area referred to; the other parts further inland receive lighter, less frequent and less reliable rainfall. With the exception of districts near the east coast, where some rain falls in all seasons, the tropical parts of the continent receive useful rains only on rare occasions from May to September.

The Southern depressions are most active in the winter—June to August—and early spring months. The rains associated with them are fairly reliable and frequent over southern Australia and Tasmania, and provide during that period the principal factor in the successful growing of wheat. These depressions also operate with varying activity during the remainder of the year, but the accompanying rains are usually lighter. The southern rains favour chiefly the south-west of Western Australia, the agricultural districts of South Australia, Victoria, Tasmania and the southern parts of New South Wales. They sometimes extend into the drier regions of the interior.

The map showing mean monthly distribution of rainfall over Australia (see p. 42) gives, in graphic form, information on the amount and occurrence of rain.

(iv) *Wettest and Driest Regions.* The wettest known part of Australia is on the north-east coast of Queensland, between Port Douglas and Cardwell, where Tully on the Tully River has an average annual rainfall of 179.26 inches and Deeral on the northern coast-line 172.26 inches. In addition, three stations situated on, or adjacent to, the Johnstone and Russell Rivers have an average annual rainfall of between 144 and 169 inches. The maximum and minimum annual amounts there, in inches, are: Tully, 310.92 in 1950 and 104.98 in 1943, a range of 205.94 inches; Deeral, 287.18 in 1945 and 94.65 in 1951, a range of 192.53 inches; Harvey Creek, 254.77 in 1921 and 80.47 in 1902, a range of 174.30 inches; Goondi, 241.53 in 1894 and 67.88 in 1915, a range of 173.65 inches; Innisfail, 232.06 in 1950 and 69.87 in 1902, a range of 162.19 inches.

On five occasions, more than 200 inches have been recorded in a year at Goondi, the last of these being in 1950, when 204.97 inches were registered.

In 31 years of record, Tully has exceeded 200 inches on eleven occasions, and in 28 complete years of record Harvey Creek has exceeded this figure four times.

In Tasmania, the wettest part is in the West Coast region, the average annual rainfall at Lake Margaret being 146.51 inches, with a maximum of 177.30 inches in 1948.

The driest known part of the continent is in an area of approximately 180,000 square miles surrounding Lake Eyre in South Australia, where the annual average is between 4 and 6 inches and where the fall rarely exceeds 10 inches in twelve months.

Records at stations have at times been interrupted, but of the 23 stations in this region which have an annual average of less than 5 inches, six have complete records extending from 30 to 55 years. Of these, Mulka has the lowest average of 4.05 inches (34 years), followed by Troudaninna with an average of 4.15 inches over 42 years. Troudaninna in the period 1893 to 1936 had only one year in which the total exceeded 9 inches (11.07 inches in 1894). There have been protracted periods when the average has been even less than 3 inches. From 1895 to 1903, Troudaninna received the following annual totals:—2.78, 0.99, 5.71, 3.04, 3.18, 2.83, 1.80, 1.11, 4.87, an average of 2.92 inches. From 1918 to 1929 the average was only 2.65 inches, and in this period from December, 1924, to November, 1929, the average was only 1.70 inches.

Mulka since 1918 has only twice exceeded 10 inches for the annual total (11.72 inches in 1920 and 13.56 in 1955) and on 16 occasions in 34 years the annual total has been less than 3 inches. In one particular period from October, 1926 to September, 1930, the average was only 1.26 inches (505 points in 48 months). However, at Kanowana, an even lower four-year average of 1.12 inches was recorded between 1896 and 1899 with yearly totals of 43, 225, 87 and 94 points. An even smaller yearly total was recorded at Mungeranie in 1889 when only 39 points were recorded on five days.

The average number of days of rain a month in this region is only 1 to 2 and the annual number ranges between 10 and 20. Oodnadatta (standard 30 years' average rainfall equal to 4.44 inches) has an average of 20 days of rain a year, while Cordillo Downs in the extreme north-east corner of the State of South Australia receives 5.16 inches on twelve days a year, averaging about one day of rain each month in the 30 year period 1911–1940.

No part of the earth, so far as is known, is absolutely rainless, and although at Arica, in northern Chile, the rainfall over a period of 15 years was nil, a further two years in which there were three measurable showers made the "average" for 17 years 0.02 inches.

(v) *Quantities and Distribution of Rainfall.* The general distribution is best seen from the rainfall map on page 41, which shows the areas subject to average annual rainfalls lying between certain limits. The proportions of the total area of each State and of Australia as a whole enjoying varying quantities of rainfall determined from the latest available information are shown in the following table:—

AVERAGE ANNUAL RAINFALL DISTRIBUTION.
(Per Cent.)

Average Annual Rainfall.	W. Aust.	N. Terr.	S. Aust.	Q'land.	N.S.W. (a)	Vic.	Tas. (b)	Total.
Under 10 inches ..	58.0	24.7	82.8	13.0	19.7	Nil	Nil	37.6
10 and under 15 ins.	22.4	32.4	9.4	14.4	23.5	22.4	Nil	19.9

(a) Includes Australian Capital Territory.
are available.

(b) Over an area of 2,777 square miles no records

Referring first to the capital cities, the records of which are given in the next table, it will be seen that Sydney, with a normal rainfall of 44.80 inches, is the wettest, Brisbane, Perth, Melbourne, Hobart and Canberra follow in that order, Adelaide with 21.09 inches being the driest. The extreme range from the wettest to the driest year is greatest at Brisbane (72.09 inches) and least at Adelaide (19.46 inches).

In order to show how the rainfall is distributed throughout the year in various parts of the continent, average figures for the various climatological districts have been selected (see map on p. 42). The figures for Northern Rivers (District 14), show that nearly

the whole of the rainfall occurs there in the summer months, while little or none falls in the middle of the year. The figures for the Central Coast, south-west of Western Australia (District 9), are the reverse, for while the summer months are dry, the winter months are very wet. In the districts containing Melbourne and Hobart, the rain is fairly well distributed throughout the twelve months, with a maximum in October for both districts. In Queensland, the heaviest rains fall in the summer months, but good averages are also maintained during the other seasons in eastern parts.

On the coast of New South Wales, the first half of the year is the wettest, with heaviest falls in the autumn; the averages during the last six months are fair, and moderately uniform. Generally, it may be said that approximately one-third of the area of the continent, principally in the eastern and northern parts, enjoys an annual average rainfall of from 20 to 50 inches or more, the remaining two-thirds averaging from 5 to 20 inches.

(vi) *Tables of Rainfall.* The following table of rainfall for a fairly long period of years for each of the Australian capitals affords information as to the variability of the fall in successive years, and the list which follows in the next paragraph of the more remarkable falls furnishes information as to what may be expected on particular occasions:—

(a) Commonwealth Forestry Bureau; records in issues of the Official Year Book prior to No. 36 were for the station at Acton which closed down in 1939. (b) Records taken from present site commenced 1883. (c) 1911–1940.

6. Remarkable Falls of Rain.—The following are the most notable falls of rain which have occurred within a period of twenty-four hours ending at 9 a.m. in the various States and Territories. For other very heavy falls at various localities, reference may be made to Official Year Book No. 14, pages 60–64, No. 22, pages 46–48 and No. 29, pages 43, 44 and 51.

7. **Snowfall.**—Light snow has been known to fall occasionally as far north as latitude 31° S., and from the western to the eastern shores of the continent. During exceptional seasons, it has fallen simultaneously over two-thirds of New South Wales, and has extended at times along the whole of the Great Dividing Range, from its southern extremity in Victoria as far north as Toowoomba in Queensland. During the winter, for several months, snow covers the ground to a great extent on the Australian Alps, where the temperature falls below zero Fahrenheit during the night. In the ravines around Mt. Kosciusko and similar localities, the snow does not entirely disappear after a severe winter.

8. **Hail.**—Hail falls most frequently along the southern shores of the continent in the winter, and over eastern Australia during the summer months. The size of the hailstones generally increases with distance from the coast. A summer rarely passes without some station experiencing a fall of stones exceeding in size an ordinary hen egg and many riddled sheets of light-gauge galvanized iron bear evidence of the weight and penetrating power of the stones.

The hailstones occur most frequently when the barometric readings indicate a flat and unstable condition of pressure. Tornadoes or tornadic tendencies are almost invariably accompanied by hail, and on the east coast the clouds from which the stones fall are frequently of a remarkable sepia-coloured tint.

9. **Droughts.**—A special article dealing with droughts was included in Year Book No. 45, pages 51–56, but is not repeated in this issue. Fuller information is available in a Bureau of Meteorology publication *Droughts in Australia* by J. C. Foley (Bulletin 43, 1957).

10. **Barometric Pressures.**—The mean annual barometric pressure (corrected to sea level and standard gravity) in Australia varies from 29.80 inches on the north coast to 29.92 inches over the central and 30.03 inches in the southern parts of the continent. In January, the mean pressure ranges from 29.70 inches in the northern and central areas to 29.95 inches in the southern. The July mean pressure ranges from 29.90 inches at Darwin to 30.12 inches at Alice Springs. Barometer readings corrected to mean sea level and standard gravity have ranged as high, under anticyclonic conditions, as 30.935 inches (at Hobart on 13th July, 1846) and have fallen as low as 27.55 inches. This record low was registered at Mackay during a tropical hurricane on 21st January, 1918. An almost equally abnormal reading of 27.88 inches was recorded at Innisfail during a similar storm on 10th March, 1918. For graphs of Mean Barometric Pressure at Capital Cities, see Official Year Book No. 37, page 35.

11. **Wind.**—(i) *Trade Winds.* The two distinctive wind currents in Australia are, as previously stated, the south-east trade and the “prevailing” westerly winds. As the belt of the earth’s atmosphere in which they blow apparently follows the sun’s ecliptic path north and south of the equator, so the area of the continent affected by these winds varies at different seasons of the year. During the summer months, the anticyclonic belt travels in high latitudes, thereby bringing the south-east trade winds as far south as 30° south latitude. The “prevailing” westerly winds retreat a considerable distance to the south of Australia, and are less in evidence in the hot months. When the sun passes to the north of the equator, the south-east trade winds follow it, and only operate to the north of the tropics for the greater part of the winter. The westerly winds come into lower latitudes during the same period of the year. They sweep across the southern areas of the continent from Cape Leeuwin to Cape Howe, and during some seasons are remarkably persistent and strong, and occasionally penetrate to almost tropical latitudes.

(ii) *North-west Monsoon.* As the belt of south-east trade winds retreats southward during the summer, it is replaced in the north and north-west of Australia first by a sequence of light variable winds and then by the north-west monsoon. In Australia, the north-west monsoon has not the persistence or regularity of the Indian south-west monsoon but is sufficiently characteristic for the summer in the north of Australia to be called the “North-west Season”. In central and eastern Queensland, the north-west monsoon in the summer has comparatively little effect and the trade winds, though weakened, are still dominant winds. With the migration of the sun northward in the autumn, the north-west monsoon is replaced first by light variable winds and then by the trade winds.

Further particulars of Australian wind conditions and meteorology will be found in Official Year Book No. 38, pages 58–61. Reference should also be made to the wind rose diagrams on pages 43 and 44.

(iii) *Cyclones and Storms.* The “elements” in Australia are ordinarily peaceful, and while destructive cyclones have visited various parts, more especially coastal areas, such visitations are rare, and may be properly described as erratic.

During the winter months, the southern shores of the continent are subject to deep depressions of the southern low-pressure belt. They are felt most severely over the south-western parts of Western Australia, to the south-east of South Australia, in Bass Strait, along the coastline of Victoria, and on the west coast of Tasmania. Apparently the more violent wind pressures from these disturbances are experienced in their northern half, or in that part of them which has a north-westerly to a south-westerly circulation.

The north-east coast of Queensland is occasionally visited by hurricanes from the north-east tropics. During the first four months of the year, these hurricanes appear to have their origin in the neighbourhood of the South Pacific Islands, their path being a parabolic curve first to the south-west and finally towards the south-east.

Very severe cyclones, locally known as “willy willies,” are peculiar to the north-west coast of Western Australia from the months of November to April, inclusive. They usually originate over the ocean to the north or north-west of Australia, and travel in a south-westerly direction with continually increasing force, displaying their greatest energy near Cossack and Onslow, between latitudes 20° and 22° South. The winds in these storms, like those from the north-east tropics, are very violent and destructive. The greatest velocities are usually to be found in the south-eastern quadrant of the cyclones, with north-east to east winds. After leaving the north-west coast, these storms either travel southwards, following the coast-line, or cross the continent to the Great Australian Bight. When they take the latter course, their track is marked by torrential rains, as much as 29.41 inches, for example, being recorded in 24 hours at Whim Creek from one such occurrence. Falls of 10 inches and over have frequently been recorded in the northern interior of Western Australia from similar storms.

Some further notes on severe cyclones and on "southerly bursters", a characteristic feature of the eastern part of Australia, appeared in early issues of the Official Year Book (see No. 6, pages 84-86), and a special article dealing with "Australian Hurricanes and Related Storms" appeared in Official Year Book No. 16, pages 80-84.

Depressions vary considerably in their isobaric forms, intensity and other characteristics. Some bring rain in variable quantities, some heat and others mainly wind. A common type in southern Australia is the "Λ" shaped trough with an abrupt "backing" of the wind or "line squall" as it passes. The cold front is most frequently found through the centre of the "trough" because it is along this line, and extending into the upper levels of the atmosphere, that the demarcation of different air masses is so well defined. The best rains in inland Australia occur when extensive masses of warm moist tropical air move into the interior and are forced to rise by convergence of flow or by impact with a cold air stream.

The speed of low pressure systems is very variable, but in general in southern latitudes the movement is of the order of 500 to 700 miles a day.

12. Influences affecting Australian Climate.—(i) *General.* Australian history does not cover a sufficient period, nor is the country sufficiently occupied, to ascertain whether or not the advance of settlement has materially affected the climate as a whole. Local changes have, however, taken place, a fact which suggests that settlement and the treatment of the land have a distinct effect on local conditions. For example, low-lying lands on the north coast of New South Wales, which originally were seldom subject to frosts, have, with the deforestation of the surrounding hills, experienced annual visitations, the probable explanation being that through the absence of trees the cold air of the highlands now flows unchecked and untempered down the sides of the hills to the valleys and lower lands.

(ii) *Influence of Forests on Climate.* Since forests doubtless exercise a great influence on local climate, it follows that to the extent that forestal undertakings will allow, the weather can be controlled by human agency. The direct action of forests is an equalizing one; thus, especially in equatorial regions, and during the warmest portion of the year, they considerably reduce the mean temperature of the air. They also reduce the diurnal extremes of shade temperatures by altering the extent of radiating surface by evaporation, and by checking the movement of air, and while decreasing evaporation from the ground, they increase the relative humidity. Vegetation greatly diminishes the rate of flow-off of rain and the washing away of surface soil, and when a region is protected by trees a steadier water supply is ensured, and the rainfall is better conserved. In regions of snowfall, the supply of water to rivers is similarly regulated and without this and the sheltering influence of ravines and gullies watercourses supplied mainly by melting snow would be subject to alternate periods of flooding and dryness. This is borne out in the case of the inland rivers, the River Murray, for example, which has never been known to become dry, deriving its steadiness of flow mainly through the causes indicated.

(iii) *Direct Influence of Forests on Rainfall.* Whether forests have a direct influence on rainfall is a debatable question, some authorities alleging that precipitation is undoubtedly induced by forests, while others take the opposite view.

Sufficient evidence exists, however, to prove that, even if the rainfall is not increased, the beneficial climatic effect of forest lands more than warrants their protection and extension. Rapid rate of evaporation, induced by both hot and cold winds, injures crops and makes life uncomfortable on the plains, and, while it may be doubted that the forest aids in increasing precipitation, it must be admitted that it does check winds and the rapid evaporation due to them. Trees as wind-breaks have been successfully planted in central parts of the United States of America, and there is no reason why similar experiments should not be successful in many parts of the treeless interior of Australia. The belts should be planted at right angles to the direction of the prevailing parching winds, and if not more than half a mile apart will afford shelter to the enclosed areas.

13. Rainfall and Temperatures, Various Cities.—Official Year Book No. 34, page 28, shows rainfall and temperature and No. 38, page 42, temperature, for various important cities throughout the world and for the Australian capitals.

14. Climatological Tables.—The averages and extremes for a number of climatological elements, which have been determined from long series of observations at the Australian capitals up to and including the year 1958 are given on the following eight pages.

NOTE.—The following points apply throughout:—

- (i) Where records are available, mean or average values have been calculated on a standard period of 30 years from 1911 to 1940.
- (ii) Extreme values have been extracted from all available years of actual record, but the number of years quoted does not include intervening periods when observations were temporarily discontinued.

CLIMATOLOGICAL DATA: PERTH, WESTERN AUSTRALIA.

CHAPTER III.

GENERAL GOVERNMENT.

§ 1. Scheme of Parliamentary Government.

1. **General.**—The legislative power of the Commonwealth is vested in the Parliament of the Commonwealth, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State, there is a State Governor who is the representative of the Sovereign for the State and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office and by the instructions which inform him in detail of the manner in which his duties are to be fulfilled. The Legislature in each State was bi-cameral until 1922, in which year the Queensland Parliament became uni-cameral. In the bi-cameral States, it consists of (a) a Legislative Council and (b) a Legislative Assembly or House of Assembly. In Queensland, the Legislative Assembly constitutes the legislature. The Upper House is known as the Senate in the Commonwealth Parliament, and as the Legislative Council in the State Parliaments. The Lower House in the bi-cameral Parliaments is known as the House of Representatives in the Commonwealth Parliament, as the Legislative Assembly in the State Parliaments of New South Wales, Victoria and Western Australia, and as the House of Assembly in the State Parliaments of South Australia and Tasmania. The legislative powers of these Parliaments are delimited by the Commonwealth and State Constitutions. The Assembly, which is the larger House, (Queensland as pointed out above is uni-cameral) is, in all cases, elective, the franchise extending to adult British subjects with certain residential qualifications. The Council in each of the States other than New South Wales is elected by the people of the State concerned, the constituencies being differently arranged and, in general, some property or special qualification for the electorate being required. In Victoria, however, under the Legislative Council Reform Act passed in October, 1950, adult suffrage was adopted for Legislative Council elections. In the case of New South Wales, the Council is elected by the members of both Houses of Parliament at a simultaneous sitting. In the Federal Parliament, the qualifications for the franchise are identical for both Houses, extending to adult British subjects who have lived in Australia for six months continuously.

2. **The Sovereign.**—(i) *Accession of Queen Elizabeth II.* On 7th February, 1952, the Governor-General and members of the Federal Executive Council proclaimed Princess Elizabeth Queen Elizabeth the Second, Queen of this Realm and of all Her other Realms and Territories, Head of the Commonwealth, Defender of the Faith, Supreme Liege Lady in and over the Commonwealth of Australia. The coronation of Her Majesty in Westminster Abbey took place on 2nd June, 1953.

(ii) *Royal Style and Titles Act 1953.* At a conference of Prime Ministers and other representatives of the British Commonwealth in London in December, 1952, it was agreed that the Royal Style and Titles then in use were not in accord with current relationships within the British Commonwealth and that there was need of a new form which would, in particular, "reflect the special position of the Sovereign as Head of the Commonwealth".

It was therefore decided that each member of the British Commonwealth should use a form of the Royal Style and Titles suited for its own circumstances, while retaining as a common element the description "Queen of Her other Realms and Territories and Head of the Commonwealth"; and that consultation between all countries of the Commonwealth should take place on any future proposal to change the form of the Royal Style and Titles used in any country.

To give effect to these decisions in Australia, the Royal Style and Titles Act was passed on 3rd April, 1953, giving Parliament's assent to the adoption by the Queen, for use in relation to the Commonwealth of Australia and its Territories, of the following Royal Style and Titles:—"Elizabeth the Second, by the Grace of God of the United Kingdom,

Australia and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith.” The Act also approves the adoption by the Queen of a Royal Style and Titles for use in relation to other countries of the British Commonwealth in accordance with the principles formulated at the London conference.

(iii) *Authorization of a Royal Great Seal.* By warrant published in the Commonwealth Gazette of 17th November, 1955, Her Majesty authorized the Great Seal of the Commonwealth to be used as a Royal Great Seal in sealing all things whatsoever (other than things that pass the said Great Seal) that bear Her Majesty's Sign Manual and the counter-signature of one of Her Ministers of State for the Commonwealth.

3. Powers and Functions of the Governor-General and of the State Governors.—
(i) *Governor-General of the Commonwealth.* Section 2 of the Commonwealth Constitution provides as follows:—

“A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.”

As the Queen's representative in Australia, the Governor-General exercises certain prerogative powers and functions assigned to him by the Queen—either by Letters Patent (*see* Letters Patent dated 29th October, 1900, and 30th October, 1958), by Instructions under the Royal Sign Manual and Signet, by Commission issued to him under the Royal Sign Manual and Signet, or by any instrument of delegation under section 2 of the Constitution. Powers which have been so assigned include, amongst others, the power to appoint a Deputy or Deputies of the Governor-General, to administer or authorize any other person to administer the Oath of Allegiance, to grant pardons and to remit fines for offences against the laws of the Commonwealth and to appoint certain officers in the Diplomatic or Consular Service of the Commonwealth.

Other powers and functions are conferred on the Governor-General by the Constitution. For example, under section 5 of the Constitution he may appoint times for holding the sessions of the Parliament, prorogue Parliament and dissolve the House of Representatives. Under section 32, the Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives. Under section 58, he assents in the Queen's name to a proposed law passed by both Houses of the Parliament or withholds assent, or reserves the law for the Queen's pleasure; or he may return the proposed law to the House in which it originated and may transmit therewith any amendments which he may recommend. Under section 61, he exercises the executive power of the Commonwealth, under section 62, he chooses and summons Executive Councillors, who hold office during his pleasure, and under section 64, he may appoint Ministers of State for the Commonwealth. By section 68, the command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General, as the Queen's representative. Under the conventions of responsible government obtaining in Commonwealth countries, the Governor-General's executive functions generally are exercised on the advice of Ministers of State. In this regard, the Governor-General's position has become assimilated to that of the Queen in relation to her Ministers of State for the United Kingdom.

In addition, many powers and functions are exercised by the Governor-General under Acts of the Commonwealth Parliament. Most Acts, for example, provide that the Governor-General may make regulations, not inconsistent with the Act, either generally to give effect to the Act or to cover certain matters specified in the power. The Governor-General may be authorized by statute to issue proclamations—for example, to declare an Act in force or a state of things to exist, e.g. the existence of an epidemic. The Governor-General has been given power by statute to legislate for certain Territories of the Commonwealth. Other statutory powers include the power to appoint and dismiss certain office holders. A reference to the Governor-General, in Acts of the Commonwealth Parliament, means, unless the contrary intention appears, the Governor-General acting with the advice of the Executive Council (Acts Interpretation Act 1901–1957, section 16A).

(ii) *Governors of the States.* The Queen is represented in each of the States by a Governor, the office having been constituted by Letters Patent under the Great Seal of the United Kingdom of various dates.

The Governors of the States exercise prerogative powers conferred on them by these Letters Patent, their Commissions of appointment, and the "Governor's Instructions" given them under the Royal Sign Manual and Signet or other instrument as specified in the Letters Patent. In addition they have been invested with various statutory functions, either under the State Constitutions, conferred by Imperial Act, or by Act of the Parliament of the State.

A Governor of a State assents in the Queen's name to Bills passed by the Parliament of the State, except those reserved for the Royal assent. The latter include certain classes of Bills which are regulated by the Constitution Acts and by the Governor's Instructions. He administers the prerogative of mercy by the reprieve or pardon of criminal offenders within his jurisdiction, and may remit fines and penalties due to the Crown.

In the performance of his functions generally, particularly those conferred by Statute, the Governor of a State acts on the advice of Ministers of State for the State.

(iii) *Holders of Office.* For the names of the Governors-General since the inception of the Commonwealth and the present State Governors, see § 3, page 73.

4. The Cabinet and Executive Government.—(i) *General.* Both in the Commonwealth and in the States, executive government is based on the system which was evolved in Britain in the 18th century, and which is generally known as "Cabinet" or "responsible" government. Its essence is that the head of the State (Her Majesty the Queen, and her representative, the Governor-General or Governor) should perform Governmental acts on the advice of her Ministers; that she should choose her principal Ministers of State from members of Parliament belonging to the party, or coalition of parties, commanding a majority in the popular House; that the Ministry so chosen should be collectively responsible to that House for the government of the country; and that the Ministry should resign if it ceases to command a majority there.

The Cabinet system operates chiefly by means of constitutional conventions, customs, or understandings, and through institutions that do not form part of the legal structure of the government at all. The constitutions of the Commonwealth and the States make fuller legal provision for the Cabinet system than the British Constitution does—for example, by requiring that Ministers shall either be, or within a prescribed period become, members of the Legislature. In general, however, the legal structure of the executive government remains the same as it was before the establishment of the Cabinet system.

The executive power of the Commonwealth is exercisable by the Governor-General, and that of the States by the Governor. In each case, he is advised by an Executive Council, which, however, meets only for certain formal purposes, as explained below. The whole policy of a Ministry is, in practice, determined by some or all of the Ministers of State, meeting without the Governor-General or Governor under the chairmanship of the Prime Minister or Premier. This group of Ministers is known as the Cabinet.

(ii) *The Cabinet.* This body does not form part of the legal mechanism of government. Its meetings are private and deliberative. The actual Ministers of the day alone are present, no records of the meetings are made public, and the decisions taken have, in themselves, no legal effect. In Australia, until January, 1956, all Ministers were members of the Cabinet. Since then, however, although in the States all Ministers are members of the Cabinet, the Commonwealth ministry is made up of twelve senior Ministers, who constitute the Cabinet, and ten Ministers of non-Cabinet rank who attend meetings of the Cabinet only when required, as, for example, when the business of the Cabinet concerns their departments. As Ministers are the leaders of the party or parties commanding a majority in the popular House, the Cabinet substantially controls, in ordinary circumstances, not only the general legislative programme of Parliament, but the whole course of Parliamentary proceedings. In effect, though not in form, the Cabinet, by reason of the fact that all Ministers are members of the Executive Council, is also the dominant element in the executive government of the country. Even in summoning, proroguing or dissolving Parliament, the Governor-General or Governor is usually guided by the advice tendered him by the Cabinet, through the Prime Minister or Premier, though legally the discretion is vested in the Governor-General or Governor himself.

(iii) *The Executive Council.* This body is usually presided over by the Governor-General or Governor, the members thereof holding office during his pleasure. All Ministers of State must be members of the Executive Council. In the Commonwealth, and also in the States of Victoria and Tasmania, Ministers remain members of the Executive Council on leaving office, but are not summoned to attend its meetings, for it is an essential feature of the Cabinet system that attendance should be limited to the Ministers of the day. The

meetings of the Executive Council are formal and official in character, and a record of proceedings is kept by the Secretary or Clerk. At Executive Council meetings, the decisions of the Cabinet are (where necessary) given legal form, appointments made, resignations accepted, proclamations issued, and regulations and the like approved.

(iv) *The Appointment of Ministers.* Legally, Ministers hold office during the pleasure of the Governor-General or Governor. In practice, however, the discretion of the Queen's representative in the choice of Ministers is limited by the conventions on which the Cabinet system rests. Australian practice follows, broadly, that of the United Kingdom. When a Ministry resigns, the Crown's custom is to send for the leader of the party which commands, or is likely to be able to command, a majority in the popular House, and to commission him, as Prime Minister or Premier, to "form a Ministry"—that is, to nominate other persons to be appointed as Ministers of State and to serve as his colleagues in the Cabinet.

The customary procedure in connexion with the resignation or acceptance of office by a Ministry is described fully in previous issues of the Official Year Book (*see* No. 6, p. 942). It may be added, however, that legislation now exists in all States, the effect of which is to obviate the necessity of responsible Ministers vacating their seats in Parliament on appointment to office.

(v) *Ministers in Upper and Lower Houses.* The following table shows the number of Ministers with seats in the Upper or Lower Houses of each Parliament in December, 1959:—

AUSTRALIAN PARLIAMENTS: MINISTERS IN UPPER OR LOWER HOUSES, DECEMBER, 1959.

Ministers with Seats in—	C'wealth.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
The Upper House ..	5	2	4	(a)	3	2	1	17
The Lower House ..	17	14	10	11	5	8	8	73
Total ..	22	16	14	11	8	10	9	90

(a) Abolished in 1922.

For the names of the occupants of ministerial office in each of the Parliaments of Australia in December, 1959, *see* § 3 of this chapter (p. 73). Subsequent changes of importance in Ministries will be found in the Appendix to this volume.

(vi) *Numbers and Salaries of Commonwealth Ministers.* Under sections 65 and 66, respectively, of the Constitution of the Commonwealth, the number of Ministers of State was not to exceed seven, and the annual sum payable for their salaries was not to exceed £12,000, each provision to operate, however, "until the Parliament otherwise provides."

Subsequently, number and salaries were increased to 8—£13,650 (1915) and to 9—£15,300 (1917). During the period of financial emergency in the early thirties the ministerial salary appropriation was reduced to as low as £10,710 a year, and was not restored to its former level until 1938, when the appropriation was £16,950. During the period of restoration of salary, the number of Ministers was increased to 10 (1935). Later increases were as follows:—to 11—£18,600 (1938); 19—£21,250 (1941) (these increases were war-time provisions, extended into peacetime in 1946); £27,650 (1947—number unaltered); 20—£29,000 (1951); £41,000 (1952—number unaltered); 22—£46,500 (1956); £66,600 (1959—number unaltered). In 1938, an additional ministerial allowance of £1,500 a year was granted to the Prime Minister; this was increased to £3,500 a year (exempt from income tax) in 1952 and at the same time an additional ministerial allowance of £1,000 a year (exempt from income tax) was granted to each other Minister. This latter figure was increased, in 1959, to £1,500 a year and the income tax exemption was removed.

All amounts payable in the foregoing paragraphs are in addition to amounts payable as Parliamentary allowances (*see* paras. 5 and 6 following).

5. Number and Salary of Members of the Legislatures, Australian Parliaments, December, 1959.—The following table shows the number and annual salary of members in each of the legislative chambers in December, 1959:—

**AUSTRALIAN PARLIAMENTS: MEMBERS AND ANNUAL SALARIES,
31st DECEMBER, 1959.**

Members in—	C'wealth.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
NUMBER OF MEMBERS.

Total ..	184	154	100	75	59	80	54	706

**ANNUAL SALARY.
(£.)**

Upper House ..	(b) 2,750	500	(c) 2,000	(a)	(d) 1,900	(e) 2,180	(f) 1,382	..
Lower House ..	(b) 2,750	(g) 2,350	(c) 2,000	h £2,501 10s.	(d) 1,900	(e) 2,180	(f) 1,382	..

(a) Abolished in 1922. (b) Plus expense allowances—Senators, £800; Members of the House of Representatives, city electorates, £850, country electorates, £1,050. See also para. 6 following. (c) Plus allowance of £550 for metropolitan, £750 for urban, £850 for inner country and £950 for outer country electorates. (d) Plus allowance of £250 where electorate is less than 50 miles from Adelaide; £300 if more than 50 miles, £325 if more than 200 miles. (e) Plus allowances varying from £250 to £450 according to distance of electorate from Perth. (f) Plus allowance according to area of electorate and distance from the capital varying from £250 to £550 in the case of the Legislative Council, and from £500 to £800 in the case of the House of Assembly. (g) Plus allowance varying from £650 to £950 according to remoteness of electorate. (h) Plus marginal allowances of £65 to £200 for metropolitan and near metropolitan electorates and ranging from £175 to £400 for other non-metropolitan electorates.

6. **Commonwealth Parliamentary Allowances.** Section 48 of the Commonwealth Constitution granted to each senator and member of the House of Representatives an allowance of £400 a year until Parliament should decide to alter it. This general allowance has been altered on several occasions (*see* Official Year Book No. 42, pp. 69 and 70) and in 1959 was raised to £2,750 a year. Certain additional allowances are also provided for holders of parliamentary offices, etc.

7. **Enactments of the Parliaments.**—In the Commonwealth, all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution. In the States, other than South Australia and Tasmania, laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council (except in Queensland) and Legislative Assembly. In South Australia and Tasmania, laws are expressed to be enacted in the name of the Governor of the State, with the advice and consent of the Parliament in the case of South Australia, and of the Legislative Council and House of Assembly in the case of Tasmania. The Governor-General or the State Governor acts on behalf of, and in the name of, the Sovereign in assenting to Bills passed by the Legislatures but he may reserve them for the special consideration of the Sovereign. The Parliaments of the States are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States, in all cases whatsoever. Subject to certain limitations, they may alter, repeal, or vary their Constitutions. Where a law of a State is inconsistent with a law of the Commonwealth, the latter prevails, and the former is, to the extent of the inconsistency, invalid.

§ 2. Parliaments and Elections.

1. **Commonwealth.**—(i) *Qualifications for Membership and for Franchise—Commonwealth Parliament.* Qualifications necessary for membership of either House of the Commonwealth Parliament are possessed by any British subject, twenty-one years of age

or over, who has resided in the Commonwealth for at least three years and who is, or is qualified to become, an elector of the Commonwealth. Qualifications for Commonwealth franchise are possessed by any British subject, not under twenty-one years of age and not disentitled on racial or other grounds, who has lived in Australia for six months continuously. Residence in a sub-division for a period of one month prior to enrolment is necessary to enable a qualified person to enrol. Enrolment and voting are compulsory. A member of the Defence Forces on service outside Australia who is a British subject not less than 21 years of age and has lived in Australia for six months continuously is entitled to vote at Commonwealth elections whether enrolled or not.

The principal reasons for disqualification of persons otherwise eligible as members of either Commonwealth House are:—Membership of the other House, allegiance to a foreign power, being attainted of treason, being convicted and under sentence for any offence punishable by imprisonment for one year or longer, being an undischarged bankrupt or insolvent, holding office of profit under the Crown (with certain exceptions), or having pecuniary interest in any agreement with the public service of the Commonwealth except as a member of an incorporated company of more than 25 persons. Persons of unsound mind, attainted of treason, convicted and under sentence for any offence punishable by imprisonment for one year or longer, or of certain non-European races are excluded from the franchise. In the main, these or similar grounds for disqualification apply also to State Parliament membership and franchise.

(ii) *Commonwealth Parliaments and Elections.* From the establishment of the Commonwealth until 1949, the Senate consisted of 36 members, six being returned by each of the original federating States. The Constitution empowers Parliament to increase or decrease the size of the Parliament and, as the population of the Commonwealth had more than doubled since its inception, the Parliament enacted legislation in 1948 enlarging both Houses of Parliament and providing a representation ratio nearer to the proportion which existed at Federation. Thus, the Representation Act 1948 provided that there shall be ten Senators from each State instead of six, increasing the total to 60 Senators. To effect this transition in the Senate, seven Senators were elected from each State at the elections of 1949, four taking office immediately the Senate sat after the election, the remaining three commencing their term on the usual date—1st July, 1950. Members of this Chamber are normally elected for a term of six years, but half the members retire at the end of every third year, and they are eligible for re-election. Accordingly, at each normal election of Senators, five Senators are now elected in each State, making 30 to be elected at each such election.

In accordance with the constitution, the total number of members of the House of Representatives must be as nearly as practicable double that of the Senate. Consequently, in terms of the Constitution and the Representation Act 1905–1938, from the date of the 1949 elections the number of members in the House of Representatives was increased from 74 to 121 (excluding the members for the internal Territories). As the States are represented in the House of Representatives on a population basis, the numbers were increased as follows:—New South Wales—from 28 to 47; Victoria—from 20 to 33; Queensland—from 10 to 18; South Australia—from 6 to 10; and Western Australia—from 5 to 8. Tasmania's representation remained at 5 and the total was increased from 74 to 121. The increase in the number of members of Parliament necessitated a redistribution of seats and a redetermination of electoral boundaries. This was carried out by Distribution Commissioners in each State on a quota basis, but taking into account community or diversity of interest, means of communication, physical features, existing boundaries of divisions and sub-divisions, and State electoral boundaries.

The population as disclosed by the Census taken on 30th June, 1954, necessitated a further alteration in representation in the House of Representatives in respect of New South Wales, South Australia, and Western Australia. Representation as from the general election for the House of Representatives on 10th December, 1955, is New South Wales 46, Victoria 33, Queensland 18, South Australia 11, Western Australia 9, Tasmania 5, the total number of members (excluding the members for the internal Territories) being increased from 121 to 122. A redistribution of electoral boundaries was effected by Distribution Commissioners appointed in each State.

Since the general elections of 1922, the Northern Territory has been represented by one member in the House of Representatives. The Australian Capital Territory Representation Act 1948 gave similar representation to the Australian Capital Territory as from the elections of 1949. The members for the Territories may join in the debates but are

not entitled to vote, except on any proposed law which relates solely to the respective Territories, on a motion for the disallowance of any ordinance of the Territory or on any amendment to such motion, or on a motion for the disallowance of a regulation under an ordinance. The Commonwealth Parliament, however, when providing for a Legislative Council for the Northern Territory in 1947, relinquished the power to disallow ordinances for that Territory.

The Constitution provides for a minimum of five members for each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. At elections for Senators, the whole State constitutes the electorate. For the purposes of elections for the House of Representatives, the State is divided into single electorates corresponding in number with the number of members to which the State is entitled. Further information regarding the Senate and the House of Representatives is given in earlier issues of the Official Year Book.

There have been twenty-two complete Parliaments since Federation. Until 1927, the Parliament met in Melbourne; it now meets in Canberra, the first meeting at Parliament House, Canberra, being opened by the late King George VI., then Duke of York, on 9th May, 1927.

The fifth Parliament, which was opened on 9th July, 1913, was dissolved on 30th July, 1914 in somewhat unusual circumstances, when for the first time in the history of the Commonwealth, a deadlock occurred between the Senate and the House of Representatives, and, in accordance with section 57 of the Constitution which provides for such an eventuality, both Houses were dissolved by the Governor-General. The nineteenth Parliament was similarly dissolved. It opened on 22nd February, 1950, but on 19th March, 1951, in its first session, a double dissolution was proclaimed for the second time since the inception of the Commonwealth.

The system of voting for the House of Representatives is preferential. Until 1948, voting for the Senate was also preferential, but the Commonwealth Electoral Act 1948, introduced with the Representation Act 1948 to enlarge the Commonwealth Parliament (*see* p. 66), changed the system of scrutiny and counting of votes in Senate elections from preferential to that of proportional representation. For a description of the system, *see* Official Year Book No. 38, pages 82-3.

For particulars of electors enrolled and of electors who voted at the various Commonwealth elections, *see* earlier Year Books. Elections for the Senate have usually been held at the same time as those for the House of Representatives. The double dissolution of the nineteenth Parliament, however, referred to above, led to the holding of Senate elections on separate dates. An election for the Senate was held on 9th May, 1953, and a further election was due within one year of 30th June, 1956, i.e. the date of the completion of the term of office of half the elected Senators. The twenty-first Parliament opened on 4th August, 1954, and was dissolved on 4th November, 1955, enabling the election for the Senate and the House of Representatives again to be held simultaneously.

The twenty-second Parliament opened on 15th February, 1956, and was dissolved on 14th October, 1958. Elections for both Houses were held on 22nd November, 1958, and particulars of electors and voting in the several States are as follows:—

SENATE ELECTION, 22nd NOVEMBER, 1958.

State.	Electors Enrolled.			Electors who Voted.			Percentage of Electors who Voted.		
	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.

The twenty-third Parliament opened on 17th February, 1959.

(iii) *Commonwealth Referendums.* According to Section 128 of the Constitution, any proposed law for the alteration of the Constitution, in addition to being passed by an absolute majority of each House of Parliament, must be submitted to a referendum of the electors in each State, and must be approved also by a majority of the States and of the electors who voted, before it can be presented for Royal Assent. So far, 24 proposals have been submitted to referendums and the consent of the electors has been received in four cases only, the first in relation to the election of Senators in 1906, the second and third in respect of State Debts—one in 1910 and the other in 1928—and the fourth in respect of Social Services in 1946. Details of the various referendums and the voting thereon were given in previous issues of the Official Year Book (*see* No. 18, p. 87, No. 31, p. 67, No. 35, p. 60, No. 36, p. 61, No. 37, pp. 64–5, No. 38, p. 84 and No. 40, p. 56), and a brief summary was given in Official Year Book No. 41 (*see* p. 67).

2. *State Elections.*—(i) *Latest in each State.* (a) *Upper Houses.* The following table shows particulars of the voting at the most recent elections for the Upper Houses or Legislative Councils in the States of Victoria, South Australia, Western Australia and Tasmania. In New South Wales, members of the Legislative Council are elected at simultaneous sittings of the members of both Houses, in Queensland there has been no Legislative Council since 1922, and in Tasmania three members of the Council are elected annually (but four in each sixth year) and the Council cannot be dissolved as a whole.

STATE UPPER HOUSE ELECTIONS.

State.	Year of Latest Election.	Electors Enrolled—Whole State.			Contested Electorates.					
					Electors who Voted.			Percentage of Electors who Voted.		
		Males.	Fe-males.	Total.	Males.	Fe-males.	Total.	Males.	Fe-males.	Total.

(a) Not available.

(ii) *Elections in Earlier Years.* Official Year Book No. 45 and earlier issues contain particulars of the voting at elections for both Upper and Lower State Houses in years prior to those shown above, and some general information is given in the following paragraphs.

3. *The Parliament of New South Wales.*—The Parliament of New South Wales consists of two Chambers, the Legislative Assembly and the Legislative Council. By legislation assented to in July, 1949, the Assembly was enlarged from 90 to 94 members, elected in single-seat electoral districts, who hold their seats during the existence of the Parliament to which they are elected. The duration of Parliament is limited to three years and by legislation enacted in 1950 cannot be extended beyond that period except with the approval of electors by referendum. Until 1934, the Council was a nominee Chamber, consisting of a variable number of members appointed for life without remuneration, but as from 23rd April, 1934, it was reconstituted and became a House of 60 members to serve without remuneration for a term of twelve years, with one-quarter of the members retiring every third year. As from 1st September, 1948, however, members of the Council have been paid an allowance, now £500 a year. Vacancies are filled by members of both Chambers, who vote as a single electoral body at simultaneous sittings of both Chambers.

Any person who is an elector entitled to vote at a Legislative Assembly election, or a person entitled to become such elector, and who has been for at least three years resident in Australia, and who is a natural-born or naturalized subject of the Queen, is eligible for election to the Legislative Council. For the Council franchise, an elector must be a sitting member of either the Legislative Council or the Legislative Assembly. Any person qualified to vote at a Legislative Assembly election for any electoral district in New South Wales is qualified to be elected as a Member for that or any other district. Any person not under twenty-one years of age, who is a natural born or naturalized subject of the Queen, and who has lived in Australia for at least six months continuously, and in New South Wales for at least three months, and in any sub-division for at least one month immediately preceding the date of claim for enrolment, is entitled to enrolment as an elector for the Legislative Assembly. Persons are disqualified either as members or voters for reasons generally the same as those outlined on page 66.

Since the introduction of responsible government in New South Wales, there have been 38 complete Parliaments, the first of which opened on 22nd May, 1856, and was dissolved on 19th December, 1857, while the thirty-eighth was dissolved on 16th February, 1959. The thirty-ninth Parliament opened on 21st April, 1959.

The elections of 1920, 1922, and 1925 were contested on the principle of proportional representation, but a reversion to the system of single seats and preferential voting was made at all later appeals to the people. The principle of one elector one vote was adopted in 1894, and that of compulsory enrolment in 1921. Compulsory voting was introduced at the 1930 election. The franchise was extended to women (Women's Franchise Act) in 1902, and was exercised by them for the first time in 1904.

4. **The Parliament of Victoria.**—Both of the Victorian legislative Chambers are elective bodies, but there is a considerable difference in the number of members of each House, and there was also, until the Legislative Council Reform Act 1950, a difference in the qualifications necessary for members and electors. The number of members in the Upper House is 34, two members being returned for each of the seventeen provinces, and in the Lower House, 66, one member being returned for each electorate. In the Legislative Council, the tenure of the seat is for six years, except that one-half of the members who are elected for provinces at any general election for the Council are entitled to hold their seats for a period of only three years, one member for each of the seventeen provinces retiring every third year. Members of the Legislative Assembly are elected for the duration of Parliament, which is limited to three years.

Prior to the passing of the Act referred to above, which operated from November, 1951, property qualifications were required for membership of, and franchise for, the Legislative Council. As alternatives to the property qualifications for the Council franchise, certain professional and academic qualifications were also allowed. As amended, however, the qualifications for membership of the Council are possessed by any adult natural-born subject of the Queen, or by any adult alien naturalized for five years and resident in Victoria for two years. Entitlement for enrolment as an elector is extended to every adult natural-born or naturalized subject who has resided in Australia for at least six months continuously and in Victoria for at least three months and in any subdivision for at least one month immediately preceding the date of claim for enrolment. These qualifications for membership and electors apply also in respect of the Legislative Assembly. Reasons for disqualification follow the general pattern for Australia (*see p. 66*).

Since the introduction of responsible government in Victoria, there have been 40 complete Parliaments, the first of which opened on 21st November, 1856, and closed on 9th August, 1859, while the fortieth was dissolved on 18th April, 1958. The forty-first Parliament was opened on 8th July, 1958.

Single voting is observed in elections held for either House, plural voting having been abolished for the Legislative Assembly in 1899 and for the Legislative Council in 1937. A preferential system of voting (*see Official Year Book No. 6, p. 1182*) was adopted for the first time in Victoria at the Assembly election held in November, 1911. The franchise was extended to women by the Adult Suffrage Act 1908, while voting at elections was made compulsory for the Legislative Assembly in 1926 and for the Legislative Council in 1935.

5. **The Parliament of Queensland.**—As stated previously, the Legislative Council in Queensland was abolished in 1922, the date of Royal Assent to the Act being 23rd March, 1922. The Legislative Assembly is composed of 75 members, each elected for a period of three years and each representing an electoral district. Under the Electoral Districts Act of 1958, the number of members and the number of electorates were increased from 75 to 78, and the increase is to become effective as from the end of the thirty-fifth Parliament which is due to be terminated before 24th August, 1960. This Act divided the State into three zones—metropolitan, provincial cities and country, having 28, 12 and 38 electoral districts respectively. A commission of three appointed by the Governor-in-Council completely distributed the prescribed zones into the number of electoral districts on a quota basis. The Commissioners were empowered to adopt a margin of allowance to be used whenever necessary, but the quota was not to be departed from to a greater extent than one-fifth more or one-fifth less; and they were to take into consideration community or diversity of interest, means of communication, physical features, the boundaries of areas of Local Authorities and divisions of Local Authorities and probable future movements of population. The boundaries of the electoral districts were to conform as far as possible to the boundaries of the areas and divisions of areas of Local Authorities.

Any person qualified to be enrolled for any electoral district is qualified for election to the Legislative Assembly. Any person not under the age of twenty-one years, who is a natural-born or naturalized British subject with continuous residence within Australia for six months, in Queensland for three months, and in an electoral district for one month prior to making a claim for enrolment, is qualified to enrol as an elector. The classes of persons not qualified to be elected are similar to those for other Australian Parliaments (*see p. 66*).

Since the establishment of responsible government in Queensland, there have been 34 complete Parliaments, the last of which was dissolved on 13th June, 1957. Opinions differ regarding the opening date of the first Queensland Parliament. According to the Votes

and Proceedings of the Legislative Assembly, the House met for the first time on 22nd May, 1860, when the members were sworn and the Speaker elected. The Governor, however, was unable to be present on that date, but he duly attended on 29th May, 1860, and delivered the Opening Address. The thirty-fifth Parliament was opened on 27th August, 1957.

At the elections held in May, 1915, the principle of compulsory voting was introduced for the first time in Australia. The election of 1907 was the first State election in Queensland at which women voted, the right being conferred under the Elections Acts Amendment Act 1905. In 1942, the system of preferential voting was abolished and that of election of the candidate obtaining the highest number of votes in the electorate now operates.

6. The Parliament of South Australia.—In this State, there is a Legislative Council composed of twenty members and a House of Assembly with 39 members, both Chambers being elective. For the Legislative Council, the State is divided into five districts each returning four members. The term of office is six years, two members for each district retiring at the end of every three years. Thirty-nine districts return one member each to the House of Assembly; prior to 1938 there were 46 members representing nineteen districts. The term of office for the House of Assembly is three years.

Any person who is at least thirty years of age, is a British subject or legally made a denizen of the State and who has resided in the State for at least three years is qualified for membership of the Legislative Council. Qualifications for the Council franchise are that a person is at least twenty-one years of age, a British subject, an inhabitant of the State with residence for at least six months prior to the registration of the electoral claim, and that he or she has had certain war service, or possesses property qualifications relating to ownership, leaseholding, or inhabitant occupancy. Any person qualified and entitled to be registered as an elector for the House of Assembly is qualified and entitled for election as a member of that House. Qualifications for enrolment as an elector for the House of Assembly are that a person is at least twenty-one years of age, is a British subject, and has lived continuously in Australia for at least six months, in the State for three months and in an Assembly subdivision for one month immediately preceding the date of claim for enrolment. Provisions in the Constitution for disqualification from membership or from the franchise in respect of either House follow the usual pattern for Australia (*see* p. 66).

Since the inauguration of responsible government in South Australia, there have been 35 complete Parliaments, the first of which was opened on 22nd April, 1857. The thirty-fifth Parliament closed on 3rd March, 1959 and the thirty-sixth was opened on 9th June, 1959. The duration of the twenty-eighth Parliament was extended from three to five years by the provisions of the Constitution (Quinquennial Parliament) Act 1933, but this Act was repealed by the Constitution Act Amendment Act (No. 2) 1939, and the three-year term was reverted to.

South Australia was the first of the States to grant women's suffrage (under the Constitution Amendment Act 1894), the franchise being exercised by women for the first time at the Legislative Assembly election on 25th April, 1896. Compulsory voting for the House of Assembly was first observed at the 1944 election. A system of preferential voting is in operation.

7. The Parliament of Western Australia.—In this State, both Chambers are elective. For the Legislative Council, there are 30 members, each of the ten provinces returning three members. One member for each province retires at the end of every two years. At each biennial election, the member elected holds office for a term of six years, and automatically retires at the end of that period. The Legislative Assembly is composed of 50 members, one member being returned by each electoral district. Members of the Legislative Assembly are elected for three years.

Qualifications required for membership of the Legislative Council are the age of at least 30 years, residence in Western Australia for two years and being a natural-born British subject or naturalized for five years prior to election and resident in the State for that period. Qualifications required for Council franchise are the age of at least 21 years, residence in Western Australia for six months, being a natural-born British subject or naturalized for twelve months, and certain property qualifications relating to freehold, leasehold, or householder occupancy. Qualifications required for membership of the Legislative Assembly are the age at least 21 years, residence in Western Australia for twelve months,

and being a natural-born British subject or naturalized for five years and resident in the State for two years prior to election. Qualifications required for the franchise are the age of at least 21 years, residence in Western Australia for six months and in an electoral district continuously for three months, and being a natural-born or naturalized British subject. Persons may be disqualified as members or voters for reasons similar to those for other Australian Parliaments (*see* p. 66).

Since the establishment of responsible government in Western Australia, there have been twenty-two complete Parliaments, the first of which was opened on 30th December, 1890. The twenty-second Parliament closed on 20th March, 1959, and the twenty-third was opened on 30th June, 1959. A preferential system of voting is in use in Western Australia.

Women's suffrage was granted by the Electoral Act of 1899. The first woman member to be elected to an Australian Parliament was returned at the 1921 election in this State. Voting for the Legislative Assembly was made compulsory in December, 1936, the first elections for which the provision was in force being those held on 18th March, 1939.

8. The Parliament of Tasmania.—In Tasmania, there are two legislative Chambers, the Legislative Council and the House of Assembly, both bodies being elective. In accordance with the Constitution Act 1946, the Council now consists of nineteen members, elected for six years and returned from nineteen divisions. Three members retire annually (except in the 1953 elections and in each sixth successive year thereafter, when four retire) and the Council cannot be dissolved as a whole. There are five House of Assembly divisions, corresponding to the Commonwealth electoral divisions, each returning seven members elected under a system of proportional representation which first came into force at the 1909 elections. By the Constitution Act 1936, the life of the Assembly was extended from three to five years.

Persons qualified for election to the Legislative Council must be at least 25 years of age and qualified to vote as Council electors, have been resident in Tasmania for a period of five years at any one time or at least two years immediately preceding the election, and be natural-born subjects of the Queen or naturalized for at least five years. An elector for the Council must be at least twenty-one years of age, a natural-born or naturalized subject and resident in Tasmania for a period of twelve months, with certain freehold or occupancy property qualifications, or the spouse of a person qualified to vote as the owner or occupier of property, or with certain academic, professional, defence force, or war service qualifications. For the House of Assembly, members must be at least twenty-one years of age, have been resident in Tasmania for a period of five years at any one time or for a period of two years immediately preceding the election, and be natural-born subjects of the Queen or naturalized for a period of five years. Electors must be at least twenty-one years of age, natural-born or naturalized subjects and resident in Tasmania for a period of six months continuously. Reasons for disqualification of members or voters are similar to those for other Australian Parliaments (*see* p. 66).

The first Tasmanian Parliament opened on 2nd December, 1856, and closed on 8th May, 1861. There have been 32 complete Parliaments since the inauguration of responsible government, the thirty-second having been dissolved on 9th April, 1959. The thirty-third Parliament was opened on 2nd June, 1959.

The suffrage was granted to women under the Constitution Amendment Act 1903 and compulsory voting for both Houses came into force on the passing of the Electoral Act in 1928. The system of voting is proportional representation by single transferable vote.

9. Superannuation Funds of the Parliament of the Commonwealth and of the Australian States.—(i) *General.* In Official Year Book No. 38, there is a conspectus of Superannuation Funds of the Parliaments of the Commonwealth and of the five States (New South Wales, Victoria, Queensland, South Australia and Western Australia) in which such schemes operate (*see* pp. 91-9). This conspectus summarizes the main features of each fund as at 30th June, 1949. Although the schemes are still essentially as described in the conspectus, there have been several subsequent amending Acts providing for extensions or increases in benefits, increased contributions, etc., in some of the schemes. In December, 1955, the Tasmanian Parliament passed an Act, the Parliamentary Retiring Allowances Act, No. 59 of 1955, details of which may be found in earlier issues of the Year Book (*see* No. 44, p. 72). The Commonwealth Retiring Allowances Act 1952 provided *inter alia* for additional benefit of £1,200 a year, subject to certain conditions, to a retired Prime Minister, and in case of his death, additional benefit of £750 a year to his widow.

(ii) *Finances.* For particulars of the financial operations of these schemes *see* Chapter XX.—Private Finance.

§ 3. Administration and Legislation.

1. **The Commonwealth Parliaments.**—The first Parliament of the Commonwealth was convened by proclamation dated 29th April, 1901, by His Excellency the Marquis of Linlithgow, then Earl of Hopetoun, Governor-General. It was opened on 9th May, 1901, by H.R.H. the Duke of Cornwall and York, who had been sent to Australia for that purpose by His Majesty the King. The Rt. Hon. Sir Edmund Barton, G.C.M.G., K.C., was Prime Minister.

The following table shows the number and duration of Parliaments since Federation:—

COMMONWEALTH PARLIAMENTS.

Number of Parliament.	Date of Opening.	Date of Dissolution.
First	9th May, 1901	23rd November, 1903
Second	2nd March, 1904	5th November, 1906
Third	20th February, 1907	19th February, 1910
Fourth	1st July, 1910	23rd April, 1913
Fifth	9th July, 1913	30th July, 1914(a)
Sixth	8th October, 1914	26th March, 1917
Seventh	14th June, 1917	3rd November, 1919
Eighth	26th February, 1920	6th November, 1922
Ninth	28th February, 1923	3rd October, 1925
Tenth	13th January, 1926	9th October, 1928
Eleventh	9th February, 1929	16th September, 1929
Twelfth	20th November, 1929	27th November, 1931
Thirteenth	17th February, 1932	7th August, 1934
Fourteenth	23rd October, 1934	21st September, 1937
Fifteenth	30th November, 1937	27th August, 1940
Sixteenth	20th November, 1940	7th July, 1943
Seventeenth	23rd September, 1943	16th August, 1946
Eighteenth	6th November, 1946	31st October, 1949
Nineteenth	22nd February, 1950	19th March, 1951(a)
Twentieth	12th June, 1951	21st April, 1954
Twenty-first	4th August, 1954	4th November, 1955
Twenty-second	15th February, 1956	14th October, 1958
Twenty-third	17th February, 1959	

(a) A dissolution of both the Senate and the House of Representatives was granted by the Governor-General, acting on the advice of the Cabinet, and under section 57 of the Constitution.

2. **Governors-General and Commonwealth Ministries.**—(i) *Governors-General.* The following statement shows the names of the Governors-General since the inception of the Commonwealth:—

GOVERNORS-GENERAL.

Rt. Hon. JOHN ADRIAN LOUIS, EARL OF HOPETOUN (afterwards MARQUIS OF LINLITHGOW) P.C., K.T., G.C.M.G., G.C.V.O. From 1st January, 1901, to 9th January, 1903.

Rt. Hon. HALLAM, BARON TENNYSON, P.C., G.C.M.G. From 17th July, 1902 to 9th January, 1903, (Acting).

Rt. Hon. HALLAM, BARON TENNYSON, P.C., G.C.M.G. From 9th January, 1903, to 21st January, 1904.

Rt. Hon. HENRY STAFFORD, BARON NORTHCOLE, P.C., G.C.M.G., G.C.I.E., C.B. From 21st January, 1904, to 9th September, 1908.

Rt. Hon. WILLIAM HUMBLE, EARL OF DUDLEY, P.C., G.C.B., G.C.M.B., G.C.V.O. From 9th September, 1908, to 31st July, 1911.

<i>Minister for Education—</i>	
THE HON. W. A. NEILSON, M.H.A.	

4. **Leaders of the Opposition, Commonwealth and State Parliaments.**—The Leader of the Opposition plays an important part in the Party system of government which operates in the Australian Parliaments. The following list gives the names of the holders of this position in each of the Parliaments in March, 1960.

Leader of the Opposition, Commonwealth and State Parliaments—

Commonwealth—The Hon. A. A. Calwell, M.P.

New South Wales—R. W. Askin, M.L.A.

Victoria—The Hon. C. P. Stoneham, M.P.

Queensland—The Hon. J. E. Duggan, M.L.A.

South Australia—M. R. O'Halloran, M.P.

Western Australia—The Hon. A. R. G. Hawke, M.L.A.

Tasmania—The Hon. W. A. Bethune, M.H.A.

5. **The Course of Legislation.**—The actual legislation by the Commonwealth Parliament up to the end of 1957 is indicated in alphabetical order in "The Acts of the Parliament of The Commonwealth of Australia passed during the year 1957, in the Second Session of the Twenty-second Parliament of the Commonwealth, with Tables, Appendix and Index".

A "Chronological Table of Acts passed from 1901 to 1957 showing how they are affected by subsequent legislation or lapse of time" is also given, and, further, "A table of Commonwealth Legislation passed from 1901 to 1957 in relation to the several provisions of the Constitution", is furnished. Reference should be made to these for complete information.

6. **Legislation during 1958.**—The following paragraphs present a selection from the legislative enactments of the Commonwealth Parliament during the year 1958. The acts included have been selected as the more important new measures and amending measures enacted during the year. The selection is somewhat arbitrary, however, because of the task of determining, in view of the limitations on space that might reasonably be allotted, the relative importance of the acts passed. Certain principles regulating the choice of acts

have nevertheless been generally observed. Ordinary appropriation and loan acts are excluded, as are also acts relating to less important changes in existing forms of taxation, in superannuation and pension schemes, and in workers' compensation. Acts providing for minor amendments to existing statutes and continuance acts are similarly excluded.

The total enactments of the Commonwealth Parliament for a number of years at fairly even intervals since 1901 show a general increase. About 17 Acts were passed in 1901, 36 in 1914, 38 in 1927, 87 in 1939 and 101 in 1958.

In Official Year Book No. 40 (*see* pp. 66–70), and previous Year Books, similar information was published for the principal legislative enactments of State Parliaments.

Commonwealth Legislation Passed in 1958.—Airlines Equipment Act 1958 (No. 70 of 1958). Amends the Australian National Airlines Act 1945–1956 (as to the Commission's power to borrow). Prescribes a method whereby the Minister may determine the maximum aircraft capacity required by the Australian National Airways Commission and by Ansett Transport Industries Limited, and may fix the amount of aircraft capacity to be used by the Commission and the company. No aircraft can be obtained or used without the Minister's approval. It also allows the Treasurer to guarantee certain loans for the purchase of certain specified aircraft.

Atomic Energy Act 1958 (No. 1 of 1958). Amends the provisions of the Atomic Energy Act 1953 relating to the constitution of the Australian Atomic Energy Commission, the resignation and vacation of office of members of the Commission, the finances of the Commission and the annual report of the Commission.

Cellulose Acetate Flake Bounty Act 1958 (No. 64 of 1958). Amends the Cellulose Acetate Flake Bounty Act 1956 by empowering the Governor-General to declare by Proclamation that a period commencing on 1st July, 1958, is a year to which the Act applies.

Christmas Island Act 1958 (No. 41 of 1958). Accepts Christmas Island as a Territory under the authority of the Commonwealth and provides for the continuance of existing laws; for the power of the Governor-General to legislate by Ordinance for the peace, order and good government of the Territory and for the tabling of Ordinances in Parliament; for the establishment of the Supreme Court of Christmas Island, for appeals therefrom to the High Court and for the establishment by Ordinance of other Courts; for the right of certain residents to elect to become Australian citizens; for the exemption from customs duties of goods produced or manufactured in the Territory and imported into Australia and not, if produced in Australia, subject to duties of excise; for the granting by the Governor-General acting with the advice of the Minister, of pardons or reduction of sentences or fines imposed upon convicted persons; and for the continuance, unless otherwise provided by Ordinance, of the legal currency previously used as legal tender in the Territory.

Christmas Island Agreement Act 1958 (No. 69 of 1958). Repeals Christmas Island Agreement Act 1949 and ratifies the agreement between the Government of Australia and that of New Zealand, made on 13th September, 1958, as to their shared participation in the phosphate production of the Island and as to continuance of the Christmas Island Phosphate Commission, which is not to enjoy immunity of the Crown in right of the Commonwealth of Australia or of New Zealand, but which is exempted from taxation.

Civil Aviation (Damage by Aircraft) Act 1958 (No. 81 of 1958). Provides that the Rome Convention, which is set out in the Schedule to the Act, shall have the force of law in Australia and shall bind the Crown in right of the States and of the Commonwealth. It provides

for procedures whereby Court orders can be obtained for the hearing of all actions arising out of the incident to be heard in the one Court and for the consolidation of those actions. It also provides for liability for damages in respect of a death arising from an incident, and for evidentiary and jurisdictional matters.

Conciliation and Arbitration Act 1958 (No. 30 of 1958). Amends the Conciliation and Arbitration Act 1904–1956 to provide for the appointment of an Acting President, or an Acting Deputy President, of the Commission; to provide for members of the Commission to have the same protection and immunity as a Judge of the Commonwealth Industrial Court; to provide for the continuation of hearings when the Commission as constituted at the original hearing cannot be further so constituted; to provide for references by, and appeals from, the Registrar to the Commission; to provide for references of questions of law by the Registrar to the Court; to provide new requirements as to the rules of an organization; and to provide new provisions relating to the cancellation of the registration of organizations.

Copper Bounty Act 1958 (No. 78 of 1958). Provides that a bounty is payable out of the Consolidated Revenue Fund at a rate determined by the Minister and based upon the price of electrolytic copper wire from overseas, the bounty to be reduced where profits (including the bounty payable at the normal rate) exceed 10 per cent. The bounty is not payable on the quantity of refined copper sold in Australia by the producer in excess of his fair share of the Australian market.

Cotton Bounty Act 1958 (No. 24 of 1958). Amends the Cotton Bounty Act 1951–1957 by extending the period of operation of the Act from 1958 to 1963.

Dairy Produce Export Control Act 1958 (No. 74 of 1958). Amends the Dairy Produce Export Control Act 1924–1954 by providing that one more member shall be included in the Australian Dairy Produce Board and shall be appointed by the Board, while the member appointed to represent the Commonwealth Government shall be chairman of the Board. Minor amendments are made as to the constitution of the Board, the staff of the Board, the finances of the Board and the annual report by the Board.

Dairy Produce Levy Act 1958 (No. 75 of 1958). Imposes a levy on all dairy produce manufactured in Australia on or after a date to be fixed by the Minister upon the recommendation of the Australian Dairy Produce Board. Separate rates of levy for butter and cheese may be prescribed, but the rate of levy shall not exceed three sixteenths ($\frac{3}{16}$) of a penny per pound. The levy is payable by the manufacturer.

Dairy Produce Research and Sales Production Promotion Act 1958 (No. 73 of 1958). Establishes a Dairy Produce Research Trust Account and a Dairy Produce Sales Promotion Fund. The trust monies are to be applied in research, training and publication in relation to scientific, economic or technical matter connected directly or indirectly with the production or distribution of dairy produce. The Dairy Produce Sales Committee is to submit to the Australian Dairy Produce Board (constituted by the Dairy Produce Export Control Act 1924–1958) proposals as to the expenditure of the trust monies, and the Board may submit recommendations to the Minister.

The Board may also administer and apply the Fund, which is obtained through the levy imposed under the Dairy Produce Levy Act 1958, and may make arrangements or take action to promote the sale of dairy produce in Australia and expand markets.

Income Tax and Social Services Contribution Act 1958 (No. 56 of 1958). Imposes income tax and social services contributions at the rates set out in the Schedules, to be levied and paid for the financial year commencing 1st July, 1958, the rates being the same as those imposed for the year commencing on 1st July, 1957.

Income Tax and Social Services Contribution Assessment Act 1958 (No. 55 of 1958). Amends the Income Tax and Social Services Contribution Assessment Act 1936-1957 by including fishing, pearl-fishing and shell-fishing in the definition of "primary production" in the Act. It also provides for depreciation as an allowable deduction in the case of plant used for pearl fishing, and it makes other provisions relating to the special depreciation allowance for primary producers. It makes expenditure by primary producers in the Territory of New Guinea (as well as in Australia) an allowable deduction under Section 75. It also introduces a section providing that under specified circumstances moneys paid by taxpayers on shares in companies mining or prospecting for petroleum are allowable deductions from their assessable incomes. It amends the provisions of the Act relating to deductions allowable to residents of isolated areas and to members of the Defence Force serving overseas.

Income Tax (International Agreements) Act 1958 (No. 25 of 1958). Amends the provisions of the Income Tax (International Agreements) Act 1953 relating to the ascertainment of Australian tax payable on dividends and by providing that the provisions of the agreement made between the Government of Australia and the Government of Canada for the avoidance of double taxation and the prevention of fiscal evasion, a copy of which is set out in the new Third Schedule to the Act shall have the force of law.

Loan (Australian National Airlines Commission) Act 1958 (No. 71 of 1958). Approves the borrowing by the Treasurer of up to 3,000,000 dollars from the United States of America in accordance with the Loan Agreement dated 10th September, 1958, between the Commonwealth and certain American banks. The Agreement is set out in the Schedule to the Act. The moneys borrowed are to be applied for the purchase of a Lockheed Electra aircraft for the Australian National Airlines Commission. The National Debt Sinking Fund Act 1923-1950 is not to apply to moneys borrowed under the Agreement.

Loan (Qantas Empire Airways Limited) Act 1958 (No. 72 of 1958). Authorizes the borrowing by the Commonwealth of up to 13,000,000 dollars from the Chase Manhattan Bank upon the security of promissory notes issued by the Commonwealth which are to form part of the agreement between the Commonwealth and the Bank dated 17th June, 1958. The Agreement is set out in the Schedules. The loan moneys are to be applied by the Commonwealth toward the purchase of five Lockheed Electra aircraft pursuant to an agreement between Qantas Empire Airways Limited and the Commonwealth. The National Debt Sinking Fund Act 1923-1950 is not to apply to the moneys borrowed under the Agreement.

Migration Act 1958 (No. 62 of 1958). Repeals the Immigration Act 1901-1949, the Pacific Island Labourers Act 1901-1906, the Aliens Deportation Act 1948, portions of the War Precautions Act Repeal Act 1920-1955, and the Emigration Act 1910.

It provides that immigrants entering Australia without entry permits, or remaining in Australia after the expiration of temporary entry permits, are prohibited immigrants and as such are liable to be deported. Temporary entry permits may be granted upon conditions, and may be cancelled at any time by the Minister in his absolute discretion. Visas shall not be deemed to be entry permits.

The Minister may order the deportation of an alien where the alien has been convicted in Australia of a crime of violence against the person or of extortion by force or threat, or has been convicted in Australia of an offence for which he has been sentenced to imprisonment for one year or longer (Section 12).

The Minister may order the deportation of an immigrant where, within five years of the immigrant's entry into Australia, he—

- (a) has been convicted of an offence punishable by death or by imprisonment for one year or longer;
- (b) has been convicted of an offence associated with prostitution; or
- (c) is an inmate of a mental hospital or public charitable institution.

(Section 13.)

The Minister may also order the deportation of an alien where it appears to him that the conduct of the alien has been such that he should not be allowed to remain in Australia (Section 14 (1)).

The Minister may order the deportation of an immigrant who has entered Australia not more than five years previously where it appears to him—

- (a) that the immigrant's conduct is such that he should not be allowed to remain in Australia;
- (b) that the immigrant advocates the overthrow by violence of established government or of all forms of law, or, advocates anarchy or assassination or the unlawful destruction of property, or is a member of an organization advocating such.

(Section 14 (2)).

A deportation order may not be made by the Minister under sections 14 (1) and 14 (2) of the Act where the alien or immigrant has requested within 30 days of receiving notice from the Minister that his case be considered by an independent Commissioner and the Commissioner has not found that the ground specified by the Minister for the deportation order is established (Section 14).

The Act also provides for the deportation of prohibited immigrants (including deserting sailors), for the manner of their detention, for their right to be heard by an independent prescribed authority within forty-eight hours after the arrest, and for the prescribed authority's power to direct the release of a person arrested as a prohibited immigrant or as a person against whom a deportation order has been made if the authority is not satisfied that there are reasonable grounds for supposing respectively that the person is a prohibited immigrant or a deportee.

It is an offence for the master, owner, agent or charterer of a ship or aircraft to allow a prohibited immigrant to land in Australia, or to refuse to transport deportees overseas when required to do so.

It is an offence for a person for reward to arrange the passage of an intending immigrant or to make representations to any Commonwealth authority with a view to the entry of an immigrant, unless that person has within thirty days of making written application to the Secretary of the Department of Immigration received a written acknowledgement of receipt of the notice. Immigration agents may be directed not to act at any time. No person shall describe himself by words suggesting that he is registered or approved to act as an immigration agent. The maximum charges for services by an immigration agent may be prescribed by regulations made under the Act.

The Act also provides that:—

- (a) it is an offence to take a child out of Australia without the written consent of the party who by an Australian court order is entitled to custody of the child, or who has instituted proceedings for such an order; and
- (b) aboriginals not subject to legal disabilities may leave Australia without the Minister's consent.

The Act differs chiefly from the repealed Immigration Act 1901–1949 in that—

- (a) the requirements previously enforced by the machinery of dictation tests are now enforced by the granting or withholding of entry permits;
- (b) new provisions are made relating to the rights and remedies of persons alleged to be prohibited immigrants or deportees, and relating to the machinery of deportation;
- (c) there is now no express provision corresponding directly to section 8AA of the repealed Act (making participation in an industrial dispute a ground for deportation); and
- (d) new provisions are made in relation to immigration agents.

Nationality and Citizenship Act 1958 (No. 63 of 1958). Amends the Nationality and Citizenship Act 1948–1955. Re-defines “protected person” and the meaning of “British subject” under section 7. Repeals section 20 (Australian citizenship originally gained by registration or naturalization lost through continuous residence outside Australia and New Guinea for seven years or more), without inserting any corresponding section. Re-enacts section 23 (citizenship of a child where parent has lost Australian citizenship). It also amends the provisions as to false declarations and as to the citizenship of a child whose parent has lost British nationality.

National Health Act 1958 (No. 68 of 1958). Amends the National Health Act 1953–1957 by providing for the establishment of special accounts by registered organizations; for the crediting of the amounts of contribution of contributors who have attained 65 years to special accounts; for crediting to special accounts of amounts of contribution where the contributors are chronically ill and their claims for fund benefit have been disallowed or only met at a rate below the standard rate payable in normal cases by the registered organization; for certain rules that registered organizations must make in relation to their special accounts; for the keeping of records relating to special accounts; and for the reimbursement by the Commonwealth of amounts standing to the debit of the special account.

It also inserts a provision (section 18A) whereby Commonwealth benefit is not payable to contributors of not more than two months' standing. It also amends sections 30 and 64 (relating to fraudulent offences against the Act).

Navigation Act 1958 (No. 36 of 1958). Amends the provisions of the Navigation Act 1912–1956 relating to the interpretation and application of the Act; the complement of ships' officers and crew to be carried on ships; certificates of competency of ships' officers; the supplying and engagement of seamen and apprentices; the rating of seamen; agreements by seamen; the discharge of seamen; the making of allotments by seamen; the payment of seamen's wages; offences by seamen and the punishment for those offences; the provisioning of ships; the medical care of seamen; seamen left on shore; seamen deceased abroad; the relief and maintenance of distressed seamen; the searching of ships; the official log-book and engine room log-book; offences by the master, owner or agent of the ship; compasses; the making of regulations providing for the stowage of bulk cargo and ballast; the liability of Commonwealth Naval Vessels under sections 259, 260 and 261 (which provide for a proportional sharing of liability for damages when damage, loss or personal injuries are caused by the fault of more than one vessel); the master's obligation to render assistance to ships or aircraft in distress; the repeal of the provisions relating to the registration of private signals; the notification to the Minister of the loss of a ship; offences by passengers; the granting of permits and licences to ships to engage in coasting trade; the salvaging of shipwrecks; salvage claims by and against the Crown; the limitation of liability in respect of Government ships; Courts of Marine Inquiry, their powers and offences in relation to them;

proceedings against the Crown; the master's duty to log and report births, deaths and marriages; the membership of the Marine Council; the calculation of nominal horsepower (in Schedule I); the scale of crew in steam ships other than river and bay ships (in Schedule II); and the repeal of Schedule III.

Overseas Telecommunications Act 1958 (No. 26 of 1958). Amends the provisions of the Overseas Telecommunications Act 1946–1952 relating to the remuneration payable to members of the Overseas Telecommunications Commission, the resignation by, vacation of office of, and the leave of absence that may be granted to, members of the Commission, the appointment of officers, the creation, abolition and reclassification of positions. It inserts in the Act—

- (a) a new section that makes it an offence for a person who is or has been employed by the Commission to divulge the contents of telecommunications; and
- (b) a new Part dealing with the finances of the Commission.

Railway Standardization (New South Wales and Victoria) Agreement Act 1958 (No. 83 of 1958). Approves the agreement between the Commonwealth and the States of New South Wales and Victoria which is set out in the Schedule whereby the Commonwealth and the States are to share in the expense of the conversion of the Melbourne-Albury railway line (which meets the terminal of the Albury-Sydney line) from its present gauge of 5 ft. 3 in. to 4 ft. 8½ in. (so as to conform in gauge with, and be linked directly to, the Albury-Sydney line). The parties are to collaborate in the preparation of plans and specifications. The Commonwealth is to bear fourteen twentieths of the expense and each State three twentieths.

Re-establishment and Employment Act 1958 (No. 7 of 1958). Repeals Part X. of the Re-establishment and Employment Act 1945–1956 (the Part which affected the operation of mortgages, legal proceedings, and the War Service Moratorium Regulations) and enacts provisions consequential on the repeal of that Part relating to postponed payments under mortgages, the continuation of certain proceedings, the cessation of suspension of execution, and the operation of any Statute of Limitations.

Re-establishment and Employment Act (No. 2) 1958 (No. 52 of 1958). Amends the Re-establishment and Employment Act 1945–1958 by providing that the provisions giving preference in employment to former members of the Forces and other persons entitled to preference (sections 24–33 inclusive) shall cease to operate at midnight on 30th June, 1960.

Repatriation Act 1958 (No. 47 of 1958). Amends the Repatriation Act 1920–1957 by providing for supplementary assistance to service pensioners and alters the definition of "income" in section 83 so as to be consistent with the amended definition introduced by the Social Services Act 1958.

River Murray Waters Act 1958 (No. 82 of 1958). Ratifies and approves the agreement between the Commonwealth and the States of New South Wales, Victoria and South Australia set out in the Schedule to the Act and amending the previous agreement between the parties (which is set out, as previously amended, in the five Schedules to the River Murray Waters Act 1915–1954).

Snowy Mountains Hydro-electric Power Act 1958 (No. 31 of 1958). Amends the Snowy Mountains Hydro-electric Power Act 1949–1956 by inserting a provision approving the Agreement and the Supplemental Agreement made between the Commonwealth, New South Wales and Victoria, copies of which are set out in the Schedules to the Act and by inserting a provision that nothing in the Act shall affect the rights of the State of South Australia under the agreements set out in the Schedules to the River Murray Waters Act 1915–1954. It amends the provisions of the Act relating to the proclamation of the Snowy Mountains Area; the duties and powers of the Snowy Mountains Hydro-electric Authority; and the provisions of the Act relating to the finances of the Authority. It inserts a new Part requiring the Authority to furnish to the Minister annual reports for submission to Parliament.

Social Services Act 1958 (No. 44 of 1958). Amends the Social Services Act 1947–1957. It excludes moneys derived from brothers and sisters of age or invalid pensioners from the definition of "income" in Part III of the Act. It increases the minimum value of property

at which an age or invalid pensioner will not be granted a pension from £1,750 to £2,250, and provides for supplementary assistance under certain circumstances for age, invalid and widows' pensioners paying rent and being entirely dependent upon their pension. It also alters the incomes and the rates at which the pensions of Class B and Class D widows are reduced. It amends the definition of "income" in section 106 of the Act (dealing with sickness benefits).

States Grants (Universities) Act 1958 (No. 27 of 1958). Repeals the States Grants (Universities) Act 1955 and the States Grants (Universities) Act 1956 and amends the States Grants (Universities) Act 1957 by omitting the provisions that provided for the grant of financial assistance in respect of the year 1958, by providing that for the purposes of the application of the 1957 Act in respect of the year 1957 the South Australian School of Mines and Industries shall be regarded as a University to the extent that it has received State grants in respect of courses recognized by the University of Adelaide for the purposes of that University's degree courses, and by providing for payment of financial assistance to the State of South Australia in respect of grants to the School. It provides, subject to the conditions specified in the Act, for the grant of financial assistance to the States, in respect of each of the years 1958, 1959 and 1960, of the respective amounts specified in the Schedules to the Act. The conditions specified in the Act require the respective amounts to be applied for recurrent expenditure, teaching and administrative costs of residential colleges, expenditure on University buildings and residential college buildings.

Stevedoring Industry Charge Act 1958 (No. 4 of 1958). Amends the Stevedoring Industry Charge Act 1947-1957 by altering the rate of stevedoring industry charge to—

- (a) in respect of employment from 1st April, 1958, to 1st July, 1959—Three shillings for every man-hour of employment; and
- (b) in respect of employment after 1st July, 1959—Two shillings and sixpence for every man-hour of employment.

Tariff Board Act 1958 (No. 14 of 1958). Amends the provisions of the Tariff Board Act 1921-1953 relating to the constitution of the Tariff Board, the appointment of acting members of the Board, the appointment of the chairman of the Board, the duties of the chairman, the power of the chairman to delegate his powers and functions, the salary and allowances of members of the Board, the leave that may be granted to members of the Board, and the meetings of the Board.

Tractor Bounty Act 1958 (No. 65 of 1958). Amends the Tractor Bounty Act 1939-1956 by empowering the Governor-General to proclaim a further period from 24th October, 1958, and lasting not longer than 30th June, 1959, as a period to which the Act applies.

Tradesmen's Rights Regulation Act 1958 (No. 53 of 1958). Amends the provisions of the Tradesmen's Rights Regulation Act 1946-1955 relating to the granting of tradesmen's certificates by Local Committees, the powers of the Central Committee, and the recognition of tradesmen trained in the Defence Force.

Western Australia Grant (Northern Development) Act 1958 (No. 28 of 1958). Empowers the Treasurer to grant to the State of Western Australia in the course of the period of 5 years from 1st July, 1958, any sum or sums out of the Consolidated Revenue Fund not exceeding in aggregate £2,500,000, in pursuance of a project in relation to the development of the northern part of Western Australia, provided that the project is submitted to and approved by the Treasurer and provided that it is such as could not reasonably be expected to be carried out during the period by the State without assistance.

Wheat Export Charge Act 1958 (No. 59 of 1958). Repeals the Wheat Export Charge Act 1954 but saves its operation in relation to wheat harvested before 1st October, 1958. It imposes an export charge on wheat and wheat products exported between 1st October, 1958, and 1st October, 1963, where, in any particular season, the average price per bushel obtained for all wheat exported exceeds the guaranteed price. The rate of charge per bushel is to be an amount equal to the excess of the average price over the guaranteed price, but is not to be more than 1s. 6d.

Wheat Acquisition (Undistributed Moneys) Act (No. 29 of 1958). Provides for the payment of undistributed moneys from the Undistributable Fractions Account kept by the Australian Wheat Board to the Commonwealth which in turn is to pay these amounts into the Wheat Research Trust Account established by the Wheat Research Act 1957 for crediting to the accounts of the States in accordance with the Schedule to the Act.

Wheat Industry Stabilization Act 1958 (No. 58 of 1958). Repeals the *Wheat Industry Stabilization Act 1954*, but saves its operation in relation to wheat harvested before 1st October, 1958. It continues in existence the Australian Wheat Board for the purposes of the Act and provides for its membership and powers. The Board may purchase wheat, sell or dispose of wheat, accept wheat given to it, grist wheat, and sell or dispose of the products of gristing. It gives the Board power to approve or disapprove the selling of wheat by persons possessing wheat in the Australian Capital Territory harvested on or after 1st October, 1958, to buy and sell wheat on behalf of such persons or to arrange for the buying and selling, to demand returns as to the quantity of wheat grown, to authorize the seizure of wheat or corn sacks—together with books, documents and accounts relating to the sacks—and to prosecute for offences against the Act. It prescribes the method whereby the Board shall determine the amount payable by it to persons who have delivered wheat to it. It continues in existence the Wheat Prices Stabilization Fund as a trust account, out of which the surplus amount of the Fund exceeding £20,000,000 is to be paid to the Board and after the deductions authorized by the Act is to be distributed among the persons who have delivered wheat to the Board. Provision is made that the operation of State laws relating to the stabilization of the Wheat Industry shall not be affected by the Act.

§ 4. Commonwealth Government Departments.

Official Year Book No. 37 contains, on pages 76–86, a list of the Commonwealth Government Departments as at 31st March, 1947, showing details of the matters dealt with by each Department, and the Acts administered by the Minister of each Department, and Year Book No. 39 contains, on pages 100–1, a description of major changes in Departmental structure from 1947 to 1951. Apart from the structural changes and transfers of functions described therein, there are several Departments which, in the interval between 1947 and 1956, were developed to cope with changing circumstances affecting the particular Department. The Prime Minister's Department, the Department of Immigration, and the Department of Social Services were among those whose organizations were thus altered. On page 81 of Official Year Book No. 43, details were shown of a major re-organization, in January, 1956, of the functions of the Departments of Commerce and Agriculture and Trade and Customs, resulting in the creation of the Departments of Trade, Customs and Excise, and Primary Industry. The reference to the Department of Trade's control of statutory marketing boards appearing in that issue should have been omitted, as this function was assumed by the Department of Primary Industry at the re-organization. In April, 1958, the Departments of Supply and Defence Production were amalgamated under the name of Department of Supply, consequent on the report of the Morshead Committee on the organization of the Defence group of Departments.

§ 5. Cost of Parliamentary Government.

The tables in this section are intended to represent the expenditure incurred in the operation of the Parliamentary system in Australia, comprising the Governor-General and Governors, the Ministries, the Upper and Lower Houses of Parliament, and electoral activities; they do not attempt to cover the expenditure on Commonwealth and State administration generally.

Comparison between individual items should be made with caution because of differences in accounting and presentation.

The following statement shows this expenditure for the Commonwealth and for each State, as well as the cost per head of population, for the year ended 30th June, 1958. In order to avoid incorrect conclusions as to the cost of the Governor-General's or Governor's establishment, it may be pointed out that a very large part of the expenditure (with the exception of the item, "Governor's salary") under the head of Governor-General or Governor represents official services entirely outside the Governor's personal interest, and carried out at the request of the Government.

COST OF PARLIAMENTARY GOVERNMENT, 1957-58.

(£.)

§ 6. Government Employees.

Information concerning the number of employees of Australian Government Authorities may be found in Chapter XII.—Labour, Wages and Prices.

CHAPTER IV.

LAND TENURE AND SETTLEMENT.

§ 1. Introduction.

For descriptions of the land tenure systems of the several States and the internal Territories see Official Year Book No. 4 (pp. 235–333) and subsequent issues, in particular No. 22 (pp. 133–195). Conspectuses of land legislation in force and of the systems of land tenure in the several States have appeared in issues up to and including No. 38, but only a brief summary is given below.

The land legislation in force in the several States may be classified broadly under five major types of land enactments, i.e., Crown lands Acts, Closer Settlement Acts, Mining Acts, Returned Service Personnel Settlement Acts, and Advances to Settlers Acts, but within the groupings there is, of course, a wide variety of individual Acts. In the two internal Territories, the legislation relating to lands is embodied in various ordinances.

In each of the States, there is a Lands Department under the direction of a Minister who is charged generally with the administration of the Acts relating to the alienation, occupation and management of Crown lands. In the Northern Territory, the Administrator, under the control of the Minister for Territories, is charged with the general administration of the Lands Ordinance and of Crown lands in the Northern Territory. In the Australian Capital Territory, the administration of the Leases Ordinances is in the hands of the Minister for the Interior.

In each of the States, there is also a Mines Department which is empowered under the several Acts relating to mining to grant leases and licences of Crown lands for mining and allied purposes. In the Northern Territory, there are several ordinances relative to mining.

As with land legislation, land tenures may be classified under broad headings; these indicate the nature of the tenure and comprise:—Free Grants and Reservations, Unconditional Purchases of Freehold, Conditional Purchases of Freehold, Leases and Licences under Land Acts, Closer Settlement, Leases and Licences under Mining Acts, and Settlement of Returned Service Personnel. For details of the various particular forms of land tenure within these seven groups in each State, see Official Year Book No. 38 (pp. 114–116) and earlier issues. Descriptions of the systems operating in the two internal Territories may be found on pages 329–30 and 338 of Official Year Book No. 39.

The following sections contain figures showing the extent of the different tenures in the several States and Territories, together with some general descriptive matter.

§ 2. Free Grants and Reservations.

1. *New South Wales.*—(i) *Free Grants.* Crown lands may, by notification in the *Gazette*, be dedicated for public purposes and be granted therefor in fee-simple. Such lands may be placed under the care and management of trustees, not less than three nor more than seven in number, appointed by the Minister.

(ii) *Reservations.* Temporary reservations of Crown lands from sale or lease may be made by the Minister.

(iii) *Areas Granted and Reserved.* During 1957–58, 5,649 acres were permanently reserved or dedicated for miscellaneous recreation reserves and similar purposes. The areas reserved at 30th June, 1958, were as follows:—For travelling stock, 5,124,820 acres; pending classification and survey, 4,251,598 acres; forest reserves 2,339,844 acres; water and camping reserves, 839,340 acres; mining reserves, 1,112,042 acres; for recreation and parks, 346,125 acres; other reserves, 7,104,261 acres; total, 21,118,030 acres.

2. *Victoria.*—(i) *Free Grants.* The Governor may grant, convey or otherwise dispose of Crown lands for public purposes, if such lands were permanently reserved for public purposes prior to 18th October, 1929.

(ii) *Reservations.* The Governor may temporarily or permanently reserve from sale, lease or licence any Crown lands required for public purposes.

(iii) *Areas Granted and Reserved.* During 1958, 69 acres were granted without purchase. The areas both temporarily and permanently reserved at the end of 1958 were as follows :—For roads, 1,642,148 acres ; water reserves, 317,591 acres ; agricultural colleges, etc., 8,434 acres ; forest and timber reserves, 5,707,901 acres ; reserves in the mallee, 410,000 acres ; other reserves, 534,350 acres ; total, 8,620,424 acres.

(iv) *Revoking of Agricultural Reservations.* Under the Agricultural Colleges Act 1944, the land on which the agricultural colleges and experimental farms at Longerenong (2,386 acres) and Dookie (6,048 acres) are established was permanently reserved as sites for the purposes of State Agricultural Colleges and the remainder of the land previously reserved has become unalienated for treatment as such under the Lands Act (*see also* § 5, para. 3).

3. *Queensland.*—(i) *Free Grants.* The Governor may grant in trust any Crown land which is or may be required for public purposes. Under the Irrigation Acts, land to be used for the purpose of any undertaking under the Acts may be vested in fee simple in the Commissioner of Irrigation and Water Supply.

(ii) *Reservations.* The Governor may reserve from sale or lease, either temporarily or permanently, any Crown land which is or may be required for public purposes. Reserved lands may be placed under the control of trustees who are empowered to lease them for not more than 21 years with the approval of the Minister.

Under the State Forests and National Parks Acts, the Governor may permanently reserve any Crown lands and declare them to be a State Forest or a National Park.

(iii) *Areas Granted and Reserved.* During 1958, the area granted in fee simple without payment was two acres. 7,714,133 acres were set apart as reserves and reserves cancelled totalled 8,965,596 acres. The areas reserved, including roads, at the end of 1958 were as follows:—Timber reserves, 3,054,527 acres ; for State forests and national parks, 5,910,101 acres ; aboriginal reserves, 6,537,206 acres ; for streets, surveyed roads and stock routes, 3,750,066 acres ; general reserves, 5,632,319 acres ; total, 24,884,219 acres.

4. *South Australia.*—(i) *Free Grants.* The Governor may dedicate Crown lands for any public purpose and grant the fee simple of such lands, with the exception of foreshores and lands for quays, wharves or landing-places, which are inalienable in fee simple from the Crown.

(ii) *Reservations.* The Governor may reserve Crown lands for the use and benefit of aboriginals, military defence, forest reserves, railway stations, park lands or any other purpose that he may think fit.

(iii) *Areas Granted and Reserves.* During 1957–58, free grants were issued for an area of 140 acres, and reserves comprising 98,726 acres were proclaimed. At 30th June, 1958, the total area of surveyed roads, railways and other reserves was 22,740,307 acres, including 18,807,394 acres set apart as aboriginal reserves.

5. *Western Australia.*—(i) *Free Grants.* The Governor may dispose of, in such manner as for the public interest may seem best, any lands vested in the Crown for public purposes, and may grant the fee simple of any reserve to secure the use thereof for the purpose for which such reserve was made.

(ii) *Reservations.* The Governor may reserve any lands vested in the Crown for public purposes. Areas not immediately required may be leased by the Governor for periods up to 10 years. Reserves may be placed under the control of a local authority or trustees, with power to lease them for a period not exceeding 21 years, or may be leased for 99 years. Temporary reserves may also be proclaimed.

(iii) *Areas Granted or Reserved.* During the year ended 30th June, 1958, approximately 1,372,124 acres were reserved for various purposes. At 30th June, 1958, the total area reserved was 58,310,017 acres, comprising State forests, 4,169,090 acres, timber reserves, 1,835,856 acres and other reserves 52,305,071 acres.

6. *Tasmania.*—(i) *Free Grants.* No mention is made in the Crown Lands Act respecting free grants of land, and it is expressly stated that no lands may be disposed of as sites for religious purposes except by way of sale under the Act. Under the Returned Soldiers' Settlement Act 1916, returned soldiers who applied prior to 31st March, 1922, were eligible to receive free grants of Crown land not exceeding £100 each in value, but these grants were conditional on the land being adequately improved.

(ii) *Reservations.* The Governor in Council may except from sale or lease, and reserve to Her Majesty any Crown land for public purposes, and vest for such term as he thinks fit any land so reserved in any person or corporate body. Any breach or non-fulfilment of the conditions upon which such land is reserved renders it liable to forfeiture. A school allotment may also be reserved.

7. **Northern Territory.**—(i) *Reservations.* The Governor-General may resume for public purposes any Crown lands not subject to any right of, or contract for, purchase, and may reserve, for the purpose for which they are resumed, the whole or any portion of the lands so resumed.

(ii) *Areas Reserved.* The total area of reserves at 30th June, 1958, was 47,985,271 acres.

8. **Summary.**—The following table shows the total areas reserved in each State, and the grand totals, for the years 1954 to 1958:—

AREAS RESERVED.
(‘000 Acres.)

	N.S.W. (a)	Victoria. (b)	Q’ld. (b)	S. Aust. (a)	W. Aust. (a)	Tas. (a)	Nor. Terr. (a)	Total.

(a) At 30th June.

(b) At 31st December.

(c) Not available.

(d) Excludes Tasmania.

§ 3. Unconditional Purchases of Freehold.

1. **New South Wales.**—(i) *Auction Purchases.* Crown lands, not exceeding in the aggregate 200,000 acres in any one year, may be sold by public auction in areas not exceeding one-half acre for town lands, 20 acres for suburban lands, and 640 acres for country lands, at the minimum upset price of £8, £2 10s., and 15s. an acre respectively. At least 10 per cent. of the purchase-money must be paid at the time of sale, and the balance within three months, or the Minister may allow the payment of such balance to be deferred for a period not exceeding ten years, 4 per cent. interest being charged. Town blocks in irrigation areas may also be sold by auction.

(ii) *After-auction Purchases.* In certain cases, land offered at auction and not sold may be purchased at the upset price. A deposit in accordance with the terms and conditions under which the land was previously offered must be lodged, and, if the application be approved by the Minister, the balance of purchase money is payable as required by the specified terms and conditions.

(iii) *Special Purchases.* In certain circumstances, land may be sold in fee simple, the purchaser paying the cost of survey and of reports thereon, in addition to the purchase-money as determined by the local Land Board.

(iv) *Improvement Purchases.* The owner of improvements in land in authorized occupation by residence under any Mining Act or the Western Lands Act of land within a gold-field or mineral field may purchase such land without competition at a price determined by the local Land Board, but at not less than £8 an acre for town lands or £2 10s. an acre for other lands. The area must not exceed one-quarter of an acre within a town or village, or two acres elsewhere, and no person may purchase more than one such area within three miles of a similar prior purchase by him.

(v) *Road Purchases.* Land from roads that are closed may, with certain exceptions, be sold to the owners of adjoining lands at a value determined by the local Land Board.

(vi) *Areas Sold.* During the year ended 30th June, 1958, the total area sold was 2,044 acres, of which 177 acres were sold by auction and eight acres as after auction purchases, while 21 acres were sold as improvement purchases, 1,735 acres as road purchases and 103 acres as special purchases.

2. **Victoria.**—(i) *General.* Lands, not exceeding 100,000 acres in any one year, specially classed for sale by auction, may be sold by auction in fee simple at an upset price of not less than £1 an acre. The purchaser must pay the survey fee at the time of the sale, together with a deposit of 12½ per cent. of the whole price; the residue is payable in equal half-yearly instalments with interest. Any unsold land in a city, town or borough area, areas specially classed for sale, isolated pieces of land not exceeding 150 acres in area, and sites for churches or charitable purposes, if not more than three acres in extent, may be sold by auction on the same terms. Swamp or reclaimed lands may also be sold by auction, subject to the condition that the owner keeps open all drains, etc., thereon.

(ii) *Areas Sold at Auction and by Special Sales.* During 1958, a total of 3,111 acres was disposed of under this tenure, 2,912 acres being country lands and 199 acres town and suburban lands.

3. *Queensland.*—From 1917 to 1929, the law precluded land being made available for any class of selection which gave the selector the right to acquire the freehold title. Amending legislation giving power to make land available under freehold tenures was passed in 1929. This provision was repealed in 1932, but restored again in 1957.

4. *South Australia.*—(i) *Sales by Auction.* The following lands may be sold by auction for cash:—(a) special blocks; (b) Crown lands which have been offered for lease and not taken up within two years; (c) town lands; and (d) suburban lands which the Governor excepts from the operations of the Land Board. A purchaser must pay 20 per cent. of the purchase money in cash, and the balance within one month or within such extended time as the Commissioner of Crown Lands may allow. Town lands may be sold subject to the condition that they cannot be transferred or mortgaged within six years without the consent of the Commissioner. If the Commissioner of Crown Lands so determines, town lands may also be offered at auction on terms and the buyer may, at his option, purchase the lands for cash or on agreement for sale and purchase.

(ii) *Areas Sold, etc.* During the year ended 30th June, 1958, the area of town lands and special blocks sold by auction was four acres. In addition, 97,001 acres were sold at fixed prices, and purchases on credit of 20,665 acres were completed, making a total of 117,670 acres.

5. *Western Australia.*—(i) *Sales by Auction.* Town, suburban and village lands may be sold by auction after being surveyed into lots and notified in the *Gazette*. They may also be disposed of after being exempted from auction or after being passed in at auction. Ten per cent. of the purchase-money must be paid in cash, together with the value of any improvements, and the balance in four equal quarterly instalments. Suburban land must be fenced within two years, and no Crown grant may be issued until the land is fenced.

(ii) *Areas Sold.* During the year ended 30th June, 1958, the area of town and suburban allotments sold by auction was 426 acres in 249 allotments.

6. *Tasmania.*—(i) *Sales by Auction.* Lands may be sold by auction.

(ii) *After-Auction Sales.* Lands, which, after having been offered at auction, have not been sold, may be sold at the upset price by private contract.

(iii) *Sales of Land in Mining Towns.* Any person being the holder of a residence licence or a business licence who shall be in lawful occupation of any residence area or business area, and who shall be the owner of buildings and permanent improvements upon such land of a value equal to or greater than the upset price of such area, shall be entitled to purchase such area at the upset price at any time prior to the day on which such area is to be offered for sale as advertised. The upset price for such area shall be determined by valuation, excluding the value of improvements, cost of survey, and of grant deed. The area which may be so purchased must not exceed one-quarter of an acre.

§ 4. Conditional Purchases of Freehold.

1. *General.*—The various methods of obtaining Crown lands by conditional purchase in the several States are given in some detail in preceding issues of the *Official Year Book* (see No. 22, pp. 141–9).

2. *New South Wales.*—At 30th June, 1958, the total number of incomplete conditional purchases in existence was 31,804 covering an area of 10,500,220 acres. During 1957–58, applications received for conditional purchases numbered two, with an area of 312 acres, both of which were confirmed; during the year, deeds were issued for 673,015 acres, bringing the total acreage for which deeds had been issued to 36,315,476 at the end of the year. These figures exclude 440 conversions from other tenures comprising 83,779 acres.

3. *Victoria.*—The area purchased conditionally in 1958, excluding selections in the Mallee Country was 20,355 acres, all with residence. The number of selectors was 81. In the Mallee, 3,408 acres were purchased conditionally in 1958. The number of selectors was seven.

4. *Queensland.*—The following selections were made freehold during 1958:—Agricultural farms, 18,773 acres, prickly pear selections, 22,486 acres, and prickly pear development selections, 11,779 acres.

5. *South Australia.*—During 1957–58, 898 acres were allotted under agreements to purchase, comprising Eyre Peninsula Railway Lands, 17 acres, Eyre Peninsula Land Purchase Act lands, one acre, and other Crown lands 880 acres.

6. **Western Australia.**—During the year ended 30th June, 1958, the number of holdings conditionally alienated was 655, all of which were conditional purchases by deferred payments, involving an area of 1,064,168 acres. Under the heading "deferred payments", are included conditional purchases of grazing lands.

In addition, Crown grants were issued during 1957–58 for the following selections, the prescribed conditions having been complied with:—Free homestead farms, 7,156 acres, and conditional purchases, 471,516 acres.

7. **Tasmania.**—During 1957–58, Crown grants were issued for 17,925 acres. The total area sold conditionally was 1,231 acres, comprising selections for purchase, 1,155 acres, and town and suburban allotments, 76 acres. The numbers of applications confirmed were 29 for country selections and 49 for town and suburban allotments.

§ 5. Leases and Licences under Land Acts.

1. **General.**—Information regarding the methods of obtaining leases and licences of Crown lands in the several States and Territories was given in earlier issues of the Official Year Book (*see* No. 22, pp. 149–63).

2. **New South Wales.**—The total area of leases and licences under the control of the Department of Lands, the Water Conservation and Irrigation Commission and the Western Lands Commission was 114,451,264 acres, of which 78,019,654 acres were held under the Western Lands Act, 28,332,048 acres under perpetual lease and 8,099,562 acres under other forms of lease, licence and permissive occupancy. The following table shows the areas held under various descriptions of leases and licences at 30th June, 1958:—

AREAS OCCUPIED UNDER LEASE OR LICENCE AT 30th JUNE, 1958, NEW SOUTH WALES.(a)
(Acres.)

Particulars.	Area.	Particulars.	Area.
<i>Crown Lands or Closer Settlement Acts</i>		<i>Crown Lands or Closer Settlement Acts—continued.</i>	
Occupational licences	611,882	Suburban holdings	58,922
Conditional leases	10,592,853	Group purchase leases	222,433
Conditional purchase leases	120,021	Irrigation areas	202,354
Settlement leases	2,590,960	Other leases(b)	156,833
Improvement leases	27,898		
Annual leases	388,116	<i>Western Lands Act.</i>	
Scrub leases	4,800	Conditional leases	121,596
Special leases	1,475,181	Perpetual leases	67,736,377
Permissive occupancies	2,141,074	Other long-term leases	9,768,650
Prickly pear leases	89,591	Permissive occupancies	269,308
Crown leases	7,049,915	Leases being issued—occupation	
Homestead farms	4,959,564	licences	91,908
Homestead selections and grants	1,691,697	Preferential occupation licences	31,815
Closer settlement leases	3,002,952		
Settlement purchase leases	1,044,564	Total	114,451,264

(a) Excludes mining leases and permits, forest leases, and occupation permits. (b) Includes leases outside irrigation areas, controlled by the Water Conservation and Irrigation Commission—138,872 acres.

3. **Victoria.**—The area of Crown lands occupied under leases and licences at 31st December, 1958, was as follows:—Grazing licences—other than Mallee, 4,059,075 acres; Mallee, 1,713,087 acres; auriferous lands licences, 2,154 acres; perpetual leases—other than Mallee, 21,468 acres; Mallee, 1,073,608 acres; swamp lands leases, 62 acres; agricultural college lands, 31,650 acres; total, 6,901,104 acres.

4. **Queensland.**—During 1958, the areas taken up consisted of 5,851,520 acres as pastoral leases, 1,771,788 acres as grazing selections and 40,886 acres as perpetual lease selections. The area occupied under lease or licence, excluding mining leases, at the end of 1958 was as follows:—Pastoral leases, 245,290,400 acres; occupation licences, 17,026,880 acres; grazing selections and settlement farm leases, 92,216,652 acres; special purpose leases—Crown land, 493,332 acres; reserves, 1,996,063 acres; perpetual lease (including prickly pear) selections, 6,865,039 acres; auction perpetual leases, 41,350 acres; forest grazing leases (reserves), 751,400 acres; total 364,681,116 acres.

5. **South Australia.**—The total area, including repurchased lands held under lease or licence except mining lease and licence, at 30th June, 1958 was 138,369,761 acres of which pastoral leases, 115,715,484 acres, constituted the major portion.

6. **Western Australia.**—At 30th June, 1958, the total area held under lease or licence issued by the Lands Department amounted to 217,746,033 acres, of which 212,543,504 acres were under pastoral lease.

7. **Tasmania.**—Crown lands leased at 30th June, 1958, for other than mining purposes amounted to 1,503,862 acres of which 1,073,700 acres were leased for pastoral purposes.

8. **Northern Territory.**—At 30th June, 1958, the total area under lease, etc., was 174,398,854 acres of which pastoral leases accounted for 139,469,293 acres and other leases, licences and mission stations, 34,929,561 acres.

9. **Australian Capital Territory.**—Under the terms of the City Area Leases Ordinance 1936–1958, each block is leased for a period of 99 years at a rental of five per cent. per annum of the unimproved capital value as assessed by the Commonwealth. The number of leases granted under this Ordinance to 30th June, 1958, (excluding leases surrendered and determined) was 4,056 representing an unimproved value of £1,725,285. Auction sales of city leaseholds are described in Official Year Book No. 22, page 599. During the year ended 30th June, 1958, 408 leases were granted for residential purposes and 17 for business purposes.

Fifteen leases under the Church Lands Leases Ordinance 1924–1932, which requires the lessees to submit a definite building programme within a specified period, and one lease under the Church of England Lands Ordinance 1926, have been granted for church purposes. A further 32 leases have been granted for either church or scholastic purposes under the various Ordinances.

The total area held under lease and licence for grazing, agricultural, dairying and other purposes (including the Jervis Bay area) amounted to 292,824 acres at 30th June, 1958.

10. **Summary.**—The following table shows particulars of the land held in each State under lease or licence for purposes other than mining and forestry, the total leased or licensed land in the Territories, and the grand totals, for the years, 1954 to 1958:—

**AREAS OCCUPIED UNDER LEASE OR LICENCE OTHER THAN MINING
AND FORESTRY.**

(a) At 30th June. (b) At 31st December. (c) Leases and licences for all purposes.
(d) Includes Jervis Bay area.

§ 6. Leases and Licences under Mining Acts.

1. **General.**—Information regarding the various forms of leases and licences under Mining Acts in the several States and the Northern Territory is given in preceding issues of the Official Year Book, (see No. 22, pp. 170–7). The following paragraphs contain particulars of operations during the year 1957–58 or 1958 and of areas occupied at the end of the year, under the various forms of lease, licence, etc., issued for mining purposes.

2. **New South Wales.**—At 30th June, 1958, total areas occupied under Mining Acts were as follows:—Gold-mining, 3,000 acres; mining for other minerals, 203,678 acres; authorities to prospect, 171,017 acres; other purposes, 8,121 acres; total, 385,816 acres.

3. **Victoria.**—During 1958, there were 165 leases and licences granted under Mining Acts, including 17 for gold-mining. Areas occupied at the end of 1958 were as follows:—Gold-mining, 15,081 acres; petroleum prospecting, 2,805,120 acres; coal, 12,822 acres; uranium and radio active minerals, 8,420 acres; other purposes, 6,240 acres; total, 2,847,683 acres.

4. **Queensland.**—During 1958, there were 2,749 miners' rights and two business licences issued. Areas taken up during 1958 totalled 489,950 acres, of which 28,319 acres were for mining for minerals other than gold and 384,000 acres were occupied under petroleum prospecting permits. Total areas occupied at the end of 1958 were as follows:—Gold-mining, 2,180 acres; mining for other minerals, 140,314 acres; miners' homesteads, 428,390 acres; petroleum prospecting, 832,000 acres; coal prospecting, 78,958 acres; total, 1,481,842 acres. The area of land held under lease only was 570,884 acres.

5. **South Australia.**—Areas taken up under Mining Acts during 1957–58 totalled 30,072 acres, including claims, 2,440 acres, mineral and miscellaneous leases, 27,532 acres, and gold leases 100 acres. Total areas occupied at 30th June, 1958 were as follows:—Gold-mining, 668 acres; other mineral and miscellaneous leases, 781,602 acres; claims, 13,561 acres; oil licences, 127,635,200 acres; other purposes, 25 acres; total, 128,431,056 acres.

6. **Western Australia.**—Areas taken up during 1958 under Mining Acts totalled 19,462 acres, including gold-mining, 11,038 acres and mining for other minerals, 7,228 acres. Total areas occupied at the end of 1958 were as follows:—Gold-mining, 28,875 acres; mining for other minerals, 95,995 acres; other purposes, 39,147 acres; total, 164,017 acres.

7. **Tasmania.**—During 1958, the number of leases issued covered 633 acres. Total areas occupied at the end of 1958 were as follows:—Gold-mining, 638 acres; coal-mining, 9,865 acres; mining for other minerals, 22,527 acres; other purposes, 4,464 acres; total, 37,494 acres.

8. **Northern Territory.**—At 30th June, 1958, the number and acreage of holdings under mining leases and tenements were as follows:—Gold-mining leases, 224 (3,622 acres); other minerals leases, 414 (11,649 acres); dredging areas, 11 (2,319 acres); gold and other mineral prospecting areas, 15 (256 acres); business and residence areas, 44 (141 acres); other purposes, 169 (9,146 acres); total, 877 (27,133 acres).

9. **Summary.**—(a) *Mining Leases etc., (other than oil prospecting licences).* The following table shows the total areas occupied under Mining Acts in each State at the end of the years 1954 to 1958:—

AREAS OCCUPIED UNDER MINING ACTS.

(Acres.)

Year.	N.S.W. (a)	Victoria.	Q'land. (b)	S. Aust. (a) (b)	W. Aust. (c)	Tasmania. (b)	Total. (d)
1954 ..	13,053,930	97,041	545,469	775,650	166,378	30,059	14,668,527
1955 ..	8,151,778	55,544	555,996	773,816	159,891	30,408	9,727,433

1958 ..	37,251	2,805	832	127,635	4,607	..	173,130

(a) Year ended 30th June.

§ 7. Closer Settlement.

1. **General.**—Particulars regarding the methods of acquisition and disposal of land for closer settlement in the several States are given in issues of the Official Year Book up to No. 22 (*see* No. 22, pp. 163–9) and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. In more recent years, however, the amalgamation, in some States, of closer settlement records with those of other authorities has made it impossible to obtain up-to-date figures for those States and for Australia as a whole, although aggregations of State totals as at the latest dates available have been published as rough approximations intended to convey some idea of the extent of the schemes throughout Australia. Particulars in this issue are restricted to a summary only of the position in each State at the latest date available.

2. **New South Wales.**—From the inception of closer settlement in 1905 to 30th June, 1958, 2,649 estates totalling 7,079,136 acres had been purchased by the Crown at a cost of £34,339,820 for purposes of closer settlement of civilians and returned service personnel.

Closer settlement is now being effected entirely under perpetual leasehold tenure (closer settlement leases).

3. **Victoria.**—The closer Settlement Commission was abolished as from 31st December, 1938, and land settlement was placed under the control of the Department of Lands and Survey. On 31st March, 1939, all Closer Settlement and Discharged Soldiers' accounts were amalgamated, the settlers' accounts adjusted and the new debt made payable over an extended period. Particulars of the operations under the provisions of the Closer Settlement Acts to 30th June, 1938, the latest date for which separate details are available, were given in earlier issues of the Official Year Book (*see* No. 42, p. 98).

4. **Queensland.**—Separate records relating to the closer settlement of re-purchased land are no longer kept by the Land Administration Board, and the operations under this heading are now included with "Leases and Licences under Land Acts." Details of the position at 31st December, 1934, the latest date for which the information is available, were given in earlier issues of the Official Year Book, (*see* No. 42, p. 98).

5. **South Australia.**—The total area re-purchased for closer settlement at 30th June, 1958 was 948,885 acres, at a cost of £2,865,200. Included in these figures are 51,872 acres purchased for £185,285, and afterwards set apart for returned service personnel, 3,214 acres reserved for forest and waterworks purposes the purchase-money being £16,185, and also 26,563 acres of swamp and other lands, which were purchased for £111,850, in connexion with reclamation of swamp-lands on the River Murray. Of the total area, 819,431 acres have been allotted to 2,800 persons.

6. **Western Australia.**—The total area acquired for closer settlement up to 30th June, 1958 was 3,081,482 acres, costing £4,447,199. Particulars of operations under the Act for the year ended 30th June, 1958, are as follows:—Area selected during the year, 85,938 acres; number of farms, etc., allotted to date, 2,516; total area occupied to date, 2,163,947 acres; area set aside for roads, reserves, etc., and balance available for selection, 917,535 acres.

7. **Tasmania.**—Up to 30th June, 1958, 38 areas had been opened up for closer settlement, the total purchase-money paid by the Government being £371,548 and the total area acquired amounting to 104,554 acres, including 12,149 acres of Crown lands. The number of farms occupied at 30th June, 1958 was 64.

§ 8. Settlement of Returned Service Personnel.

1. **War Service Land Settlement Scheme.**—(i) **General.** The War Service Land Settlement Scheme provides for the settlement on the land of eligible ex-servicemen from the 1939–45 War and the Korea-Malaya operations. Finance for capital expenditure under the scheme in South Australia, Western Australia and Tasmania and for special loans to New South Wales and Victoria is provided through annual Loan (War Service Land Settlement) Acts. Finance for other aspects of the Scheme in all States is provided by annual parliamentary appropriation. The States Grants (War Service Land Settlement) Act 1952 provides that the responsible Commonwealth Minister may make grants of financial assistance to the States under such terms as he may from time to time determine.

New South Wales, Victoria and Queensland agreed, at the inception of the Scheme, to find their own finance for the acquisition and development of properties. In 1954, Queensland abandoned the Scheme and made available for general settlement all unallotted lands held under it.

In an effort to hasten the settlement of qualified applicants in New South Wales and Victoria, the Commonwealth, since 1st July, 1955, has made available to New South Wales and Victoria repayable loans with a maximum of £2 million to each State in any one year.

The Commonwealth has agreed to a request from the States that the total funds available for the year 1958-59 be spread over two years, namely 1958-60. The extent of these loans is dependent on provisions by the State from its own funds for amounts advanced and can be briefly summarized as follows:—Total advances from inception to 30th June, 1959.—New South Wales, £5,029,950; Victoria, £6,198,703.

For more detailed information about the agreements and the methods of operation and administration of the Scheme, see Official Year Book No. 37, pages 113-8. Issue No. 39 contains a brief general description of the Scheme.

(ii) *Summary of Operations to 30th June, 1959.* The following table shows the operations of the War Service Land Settlement Scheme in each State up to 30th June, 1959:—

WAR SERVICE LAND SETTLEMENT.

SUMMARY TO 30TH JUNE, 1959.

State.	Land Acquired.	Farms Allotted.		Farms in Course of Development.		Other.

Total ..	14,088,132	8,812	12,898,682	549	677,894	511,556

(a) In New South Wales, properties are regarded by the State as being allotted at the date of acquisition. (b) Land previously approved now to be developed for closer settlement. (c) War Service Land Settlement was discontinued in 1954, and unallotted lands were made available for general settlement. (d) Crown lands, title to which has not been finalized pending survey.

(iii) *Expenditure.* The following table shows a dissection of the Commonwealth expenditure on War Service Land Settlement to 30th June, 1959:—

WAR SERVICE LAND SETTLEMENT (1939-45 WAR AND KOREA/MALAYA OPERATIONS): COMMONWEALTH EXPENDITURE TO 30th JUNE, 1959.

(£.)

Advances to States.	N.S.W.	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	Total.
For acquisition of land	3,178,583	3,458,701	2,110,750	8,748,034
For development and improvement of land	12,707,280	17,592,885	10,572,304	40,872,469
Special Loans ..	5,029,950	6,198,703	11,228,653
Commonwealth contributions to excess cost over valuation ..	272,729	3,573,989	116,105	675,600	482,722	315,913	5,437,058
To provide credit facilities to settlers	4,344,654	11,862,396	3,066,043	19,273,093
For remission of settlers' rent and interest ..	410,098	153,475	36,214	113,002	347,440	110,242	1,170,471
For payment of living allowances to settlers ..	1,002,507	1,057,000	163,136	301,885	383,892	125,870	3,034,290
For operation and maintenance of irrigation projects	569,159	16,611	1,751	587,521
Loss on advances ..	14,428	1,847	61,159	6,824	114,576	1,968	200,802
Cost of administration of credit facilities	151,190	488,023	71,120	710,333
Total ..	6,729,712	10,985,014	376,614	22,048,177	34,747,246	16,375,961	91,262,724

Repayments of expenditure to 30th June, 1959, on the acquisition, development and improvement of land amounted to £7,514,964, and on the provision of credit facilities to settlers to £8,999,685, so that the total expenditure was reduced by £16,514,649 to £74,748,075. In addition, miscellaneous receipts in South Australia, Western Australia and Tasmania to 30th June, 1958, amounted to £3,690,301.

2. Loans and Allowances (Agricultural Occupations) Scheme.—(i) *General*. Full details of the measures taken to provide for the re-establishment of ex-servicemen in rural occupations were given in Official Year Book No. 37, pages 117–8.

(ii) *Loans (Agricultural Occupations)*. The following table shows particulars for each State and certain Territories to 30th June, 1959:—

LOANS (AGRICULTURAL OCCUPATIONS) : SUMMARY TO 30th JUNE, 1959.

State.	Applications.			Loans Approved.			Advanced by Commonwealth Treasury to Lending Authorities.	Advanced by Lending Authorities to Applicants. (b)

(a) Includes expenditure on new loans of moneys repaid by borrowers.

The following summary sets out the net expenditure to 30th June, 1959, after allowing for miscellaneous receipts and repayments:—

Miscellaneous Receipts to 30th June, 1959—	£
War Service Land Settlement	3,690,301
Agricultural Loans and Allowances	5,879,689
Rural Training	148,735
Total	9,718,725
Repayments, War Service Land Settlement Loans	16,514,649
Total Receipts and Repayments	26,233,374
Total Expenditure to 30th June, 1958	106,511,214
less Receipts and Repayments	26,233,374
Net Expenditure to 30th June, 1958	80,277,840

§ 9. Advances to Settlers.

1. General.—A detailed statement regarding the terms and conditions governing advances to settlers in the several States and the Northern Territory may be found in earlier issues of the Official Year Book (*see* No. 22, pp. 179–86).

The summaries of loans and advances in the following paragraphs are compiled from returns supplied by the various State government lending agencies in the several States. They include transactions in lands acquired under closer and soldier settlement schemes, but exclude balances owing on former Crown lands sold on the conditional purchase, etc., system.

The amounts outstanding do not represent the actual differences between the total advances and settlers' repayments, for considerable remissions of indebtedness have been made in all States as a result of reappraisements of land values and the writing down of debts. In general, they include both principal and interest outstanding.

A summary for Western Australia is not included, as practically the only Governmental funds being made available are Commonwealth (*see* § 8 above).

In New South Wales and Victoria, expenditure on the acquisition, development and improvement of land for war service land settlement is provided for by the States, and particulars thereof are included in the respective summaries. In Queensland, no money is paid for the value of the land acquired, most land being occupied on lease from the Government, but advances in respect of improvements are included. In the other States, this expenditure is provided for by the Commonwealth and particulars are included in § 8 above.

Loans (Agricultural Occupations) under the Commonwealth Re-establishment and Employment Act 1945 and certain advances for the purchase of wire-netting and for other purposes made from finance provided by the Commonwealth are included in the summaries following.

2. New South Wales.—The following table shows particulars respecting advances, etc., under State Authorities to 30th June, 1958:—

ADVANCES TO SETTLERS, ETC.: NEW SOUTH WALES.

Advances, etc.	Advances, etc., made during 1957-58.	Total Advances, etc., to 30th June, 1958.	Balance outstanding at 30th June, 1958.

Commonwealth Re-establishment and Employment Act 1945	501
Total	825,178	24,515,486	2,631	6,331,420

6. *Western Australia.*—The operations prior to 1945 covered in this section related to moneys made available through, or by, the old Agricultural Bank and other Government Departments for the purpose of agricultural development. On 1st October, 1945, however, the Agricultural Bank was reconstituted as the Rural and Industries Bank of Western Australia, and was given authority to operate similarly to the associated banks. Certain securities in the books of the old bank were taken over by the general banking division of the new bank, and the clients concerned then operated with privileges and obligations similar to those provided by other banking institutions. The majority of the remaining securities, also, were eventually transferred.

At present, very limited funds are being made available by the State Government for advances for agricultural development, the bulk of the moneys for this purpose being provided by the Commonwealth Government under the War Service Land Settlement and Commonwealth Re-establishment and Employment Acts. Particulars of this expenditure are shown in § 8 above.

7. *Tasmania*.—The following table shows particulars of advances under State Authorities to 30th June, 1958. Although not regarded as outstanding advances by the Department of Agriculture the figures in connexion with closer and soldier land settlement have been included in the table for comparative purposes; the areas so purchased have been leased on 99-year terms having an option of purchase which the leaseholder may exercise at any time.

ADVANCES TO SETTLERS, ETC.: TASMANIA.

Advances, etc.	Advances, etc., made during 1957–58.	Total Advances, etc., to 30th June, 1958.	Balance outstanding at 30th June, 1958.

(a) Excludes £204,813 advances capitalized, £79,166 advances written off to bad debts, and £40,789 written off to revaluation. (b) Not regarded by the Department as outstanding advances. (c) Number of leaseholders, including those to whom advances have been made.

8. *Northern Territory*.—During the year 1957–58, 40 advances totalling £81,344 were approved and advances made totalled £54,762. At 30th June, 1958, the balance outstanding from 82 settlers, including interest, was £127,271.

9. *Summary of Advances*.—The following table is a summary for each State (except Western Australia) and the Northern Territory to 30th June, 1958. The particulars so far as they are available, represent the total sums advanced to settlers, including amounts spent by the various Governments in the purchase and improvement of estates disposed of by closer and soldier land settlement, while the amounts outstanding reveal the present indebtedness of settlers to the Governments, including arrears of principal and interest but excluding amounts written off debts and adjustments for land revaluations. Particulars of Loans (Agricultural Occupations) under the Commonwealth Re-establishment and Employment Act 1945 and of certain advances for wire-netting and other purposes provided from Commonwealth funds are included.

ADVANCES TO SETTLERS, ETC.: SUMMARY.

(a) Includes expenditure on acquisition, development and improvement of land for war service land settlement (see p. 99). (b) Incomplete. (c) Number of accounts. (d) Not available.

§ 10. Alienation and Occupation of Crown Lands.

1. **General.**—The figures shown in the previous parts of this chapter show separately the areas alienated, in process of alienation, or occupied under various tenures. The following tables set out the position with regard to the tenure of land in each State, in the Northern Territory, and in the Australian Capital Territory during 1958. A summary for each State and Territory and for Australia as a whole is also included. Particulars for each year from 1948 to 1958 appear in *Primary Industries Bulletin* No. 52, Part 1.—Rural Industries, page 1. The area occupied includes roads, permanent reserves, forests, etc. In some cases, lands which are permanently reserved from alienation are occupied under leases or licences, and have been included therein. Lands occupied under leases or licences for pastoral purposes are frequently held on short tenures only, and could thus be made available for settlement practically whenever required.

2. **New South Wales.**—The total area of New South Wales is 198,037,120 acres, of which 27.1 per cent. had been alienated at 30th June, 1958; 6.1 per cent. was in process of alienation; 58.8 per cent. was held under leases and licences; and the remaining 8.0 per cent. was unoccupied, or held by the Crown.

The following table shows particulars as at 30th June, 1958:—

**ALIENATION AND OCCUPATION OF CROWN LANDS: NEW SOUTH WALES,
30th JUNE, 1958.
(Acres.)**

Particulars.	Area.	Particulars.	Area.
1. Alienated.		3. Held under Leases and Licences.	
Granted and sold prior to 1862 ..	7,146,579	Homestead selections and grants ..	1,691,697
Sold by auction and other sales, 1862 to date ..	15,785,681	Alienable leases, long-term and perpetual ..	25,500,081
Conditionally sold, 1862 to date ..	36,315,476	Long-term leases with limited right of alienation ..	1,723,082
Granted under Volunteer Land Regulations, 1867 to date ..	172,198	Other long-term leases ..	81,775,150
Granted for public and religious purposes ..	265,986	Short-term leases and temporary tenures ..	3,761,254
	59,685,920	Forest leases ..	1,844,394
		Mining and auriferous leases ..	195,309
Less lands resumed or reverted to Crown ..	6,024,476	Total ..	116,490,967
Total ..	53,661,444		
2. In Process of Alienation.		4. Unoccupied—Particulars of Lord Howe Island not being available, the area, 3,220 acres, is included under unoccupied (approximate) ..	15,791,319
Conditional purchases ..	10,500,220		
Closer settlement purchases ..	1,210,697		
Soldiers' group purchases ..	139,892		
Other forms of sale ..	242,581		
Total ..	12,093,390	5. Total Area of State ..	198,037,120

3. **Victoria.**—The total area of Victoria is 56,245,760 acres, of which 55.4 per cent. had been alienated up to the end of 1958; 3.0 per cent. was in process of alienation under deferred payments and closer settlement schemes; 12.3 per cent. was occupied under leases and licences; and 29.3 per cent. was unoccupied or held by the Crown.

The following table shows the distribution:—

**ALIENATION AND OCCUPATION OF CROWN LANDS: VICTORIA,
31st DECEMBER, 1958.
(Acres.)**

Particulars.	Area.	Particulars.	Area.
1. <i>Alienated</i>	31,178,175	3. <i>Leases and Licences held—</i> Under Lands Department—	
		Perpetual Leases	(a) 1,095,076
		Agricultural College Leases	31,650
		Other Leases and Licences	2,216
		Temporary (Yearly) Grazing Licences	5,772,162
2. <i>In Process of Alienation—</i> Exclusive of Mallee and Closer Settlement Lands	255,964	<i>Total</i>	6,901,104
Mallee Lands (exclusive of Closer Settlement Lands)	1,167,648		
Closer Settlement Lands	241,165	4. <i>Occupied by the Crown or Un- occupied</i>	16,501,704
<i>Total</i>	1,664,777	5. <i>Total Area of State</i>	56,245,760

(a) Large increase is due to issue of new leases under amending legislation.

4. *Queensland.*—The total area of this State is 426,880,000 acres, of which, on 31st December, 1958, 5.9 per cent. was alienated; 0.6 per cent. was in process of alienation; and 85.6 per cent. was occupied under leases and licences. The remainder, 7.9 per cent., was either unoccupied or held as reserves or for roads.

The distribution is shown in the following table:—

**ALIENATION AND OCCUPATION OF CROWN LANDS: QUEENSLAND,
31st DECEMBER, 1958.
(Acres.)**

Particulars.	Area.	Particulars.	Area.
1. <i>Alienated—</i>		3. <i>Occupied under Leases and Licences—</i>	
By Purchase	25,196,871	Pastoral Leases	245,290,400
Without Payment	92,185	Occupation Licences	17,026,880
		Grazing Selections and Settle- ment Farm Leases	92,216,652
		Leases—Special Purposes(a)	2,489,395
		Mining Leases	658,174
		Perpetual Lease Selections and Perpetual Lease Prickly Pear Selections	6,865,039
		Auction Perpetual Leases, etc. Forest Grazing Leases (of Reserves)	41,350
			751,400
		<i>Total</i>	365,339,290
		4. <i>Reserves (net, not leased), Surveyed Roads and Surveyed Stock Routes</i>	22,136,757
<i>Total</i>	25,289,056	5. <i>Unoccupied</i>	11,637,015
		6. <i>Total Area of State</i>	426,880,000
2. <i>In Process of Alienation</i>	2,477,882		

(a) Special leases of Crown land, 493,332 acres; special leases of reserves, 1,996,063 acres.

5. *South Australia.*—The area of South Australia is 243,244,800 acres and at 30th June, 1958, 6.3 per cent. was alienated; 0.2 per cent. in process of alienation; 56.9 per cent. occupied under leases and licences; and 36.6 per cent. occupied by the Crown or unoccupied.

The following table shows the distribution:—

**ALIENATION AND OCCUPATION OF CROWN LANDS: SOUTH AUSTRALIA,
30th JUNE, 1958.
(Acres.)**

Particulars.	Area.	Particulars.	Area.
1. <i>Alienated</i> —		3. <i>Held under Lease and Licence(a)</i> —	
Sold	14,157,567	Perpetual Leases, including Ir-	
Free Grants	914,163	rigation Leases	19,861,480
Dedicated	270,017	Pastoral Leases	115,715,484
		Other Leases and Licences	2,792,797
		<i>Total</i>	138,369,761
<i>Total</i>	15,341,747	4. <i>Area Unoccupied(b)</i>	89,059,546
2. <i>In Process of Alienation</i>	473,746	5. <i>Total Area of State</i>	243,244,800

(a) Mining leases and licences have also been issued over an area comprising 128,431,056 acres.

(b) Includes surveyed roads, railways and other reserves, salt water lakes, lagoons, and fresh water lakes.

6. *Western Australia.*—The total area of Western Australia is 624,588,800 acres, of which, at 30th June, 1958, 4.2 per cent. was alienated; 2.1 per cent. was in process of alienation; and 35.5 per cent. was occupied under leases and licences issued either by the Lands, Mines or Forests Departments. The balance of 58.2 per cent. was unoccupied.

The following table shows the distribution:—

**ALIENATION AND OCCUPATION OF CROWN LANDS: WESTERN AUSTRALIA,
30th JUNE, 1958.
(Acres.)**

Particulars.	Area.	Particulars.	Area.
1. <i>Alienated</i>	26,205,502	3. <i>Leases and Licences in Force</i> —	
		(i) Issued by Lands Department—	
2. <i>In Process of Alienation</i> —		Pastoral Leases	212,543,505
Free Homestead Farms	350,714	Special Leases	3,152,756

Selections under the Agricultural		Residential Lots	4,634
Lands Purchase Act	289,774	Perpetual Leases	1,228,188
Grazing Land	1,384,159	(ii) Issued by Mines Department—	
Town and Suburban Lots	793	Gold-mining Leases	21,017
Crown Grants of Reserves	77,443	Mineral Leases	43,269
		Miners' Homestead	
		Leases	34,106
		(iii) Issued by Forests Department—	
		Timber Permits	3,919,067
<i>Total</i>	13,053,345	<i>Total</i>	221,763,493
		4. <i>Area Unoccupied</i>	363,566,460
		5. <i>Total Area of State</i>	624,588,800

7. *Tasmania.*—The total area of Tasmania is 16,778,000 acres, of which, at 30th June, 1958, 37.8 per cent. had been alienated; 1.2 per cent. was in process of alienation; 10.4 per cent. was occupied under leases and licences for either pastoral, agricultural, timber, or mining purposes, or for closer or soldier settlement; while the remainder (50.6 per cent.) was unoccupied or reserved by the Crown.

The following table shows the distribution:—

**ALIENATION AND OCCUPATION OF CROWN LANDS: TASMANIA,
30th JUNE, 1958.
(Acres.)**

Particulars.	Area.	Particulars.	Area.
1. <i>Alienated</i>	6,346,425	3. <i>Leases and Licences—continued.</i>	
2. <i>In Process of Alienation</i> ..	206,781	(i) Issued by Lands Department— <i>continued.</i>	
3. <i>Leases and Licences—</i>		Soldier Settlement ..	54,687
(i) Issued by Lands Department—		Short-term Leases ..	816
Islands	95,431	(ii) Issued by Mines Department ..	36,625
Ordinary Leased Land ..	978,269	<i>Total</i>	1,743,655
Land Leased for Timber ..	563,315	4. <i>Area Occupied by the Crown or Un-</i>	
Closer Settlement	14,512	occupied	8,481,139
		5. <i>Total Area of State</i>	16,778,000

8. **Northern Territory.**—The area of the Northern Territory is 335,116,800 acres, of which, at 30th June, 1958 only 0.1 per cent. was alienated; 52.0 per cent. was held under leases and licences; 14.3 per cent. was reserved for aboriginal, defence and public requirements; and the remaining 33.6 per cent. was unoccupied and unreserved.

The following shows the mode of occupancy of areas at 30th June, 1958:—Alienated, 376,562 acres; leased—pastoral leases, 139,469,293 acres, other leases, licences and mission stations, 34,929,561 acres, total leased, 174,398,854 acres; reserved for aboriginal, defence and public requirements, 47,985,271 acres; unoccupied and unreserved, 112,356,113 acres; total, 335,116,800 acres.

9. **Australian Capital Territory.**—Alienated land of the Territory (excluding the Jervis Bay area) at the end of 1958 comprised 11.3 per cent. of the total area; land in process of alienation 7.1 per cent; land held under lease and licence 49.2 per cent; land otherwise occupied, including city tenures, 8.3 per cent.; and unoccupied 24.1 per cent.

The following are the particulars of land areas in the Australian Capital Territory at the end of 1958:—Alienated 65,857 acres; in process of alienation 41,224 acres; leased—Grazing, agricultural, etc., leases, 275,458 acres; grazing licences, 11,100 acres; otherwise occupied, including city area leases, 48,604 acres; total leased, 335,162 acres; unoccupied, 140,686 acres; total, 582,929 acres. Including the Jervis Bay area of 18,000 acres—6,266 acres leased and 11,734 acres otherwise occupied—the grand total for the whole Territory is 600,929 acres.

10. **Summary.**—The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1958:—

ALIENATION AND OCCUPATION OF CROWN LANDS, 1958.

State or Territory.	Private Lands.				Crown Lands.				Total Area.
	Alienated.		In Process of Alienation.		Leased or Licensed.		Other.		
	'000 Acres.	Per Cent.	'000 Acres.	Per Cent.	'000 Acres.	Per Cent.	'000 Acres.	Per Cent.	
N.S.W.(a) ..	53,662	27.1	12,093	6.1	116,491	58.8	15,791	8.0	198,037
Victoria(b) ..	31,178	55.4	1,665	3.0	6,901	12.3	16,502	29.3	56,246
Queensland(b) ..	25,289	5.9	2,478	0.6	365,339	85.6	33,774	7.9	426,880
S. Aust.(a) ..	15,342	6.3	474	0.2	138,370	56.9	89,059	36.6	243,245

Nor. Terr.(a) ..	376	0.1	174,399	52.0	160,342	47.9	335,117
A.C.T.(b)(c) ..	66	11.0	41	6.8	342	56.9	152	25.3	601
Australia ..	158,465	8.3	30,011	1.6	1,025,349	53.9	687,667	36.2	1,901,492

(a) At 30th June.

(b) At 31st December.

(c) Includes Jervis Bay area.

A diagram showing in graphical form the areas alienated from the State, those in process of alienation under the various systems of deferred payments, the areas held under leases or licences and the areas left unoccupied was included in earlier issues of the Official Year Book (see No. 41, page 73), but is not reprinted in this issue.

CHAPTER V.

THE TERRITORIES OF AUSTRALIA.

NOTE.—The internal Territories of Australia are the Northern Territory and the Australian Capital Territory. External Territories under the control of Australia are:—Norfolk Island; Papua (formerly British New Guinea); the Territory of New Guinea (under Trusteeship Agreement with the United Nations); Nauru (under Trusteeship Agreement with the United Nations); the Territory of Heard and McDonald Islands; the Australian Antarctic Territory; the Territory of Ashmore and Cartier Islands; the Territory of Cocos (Keeling) Islands; and the Territory of Christmas Island. Information on all except Ashmore and Cartier Islands is contained in the following pages, and details of the acquisition of all the Territories will be found on pages 5, 23 and 24 of Chapter I. (See map on page 109 for location of Territories.)

THE NORTHERN TERRITORY.

§ 1. Area and Population.

1. **Area.**—Upon the extension of New South Wales westward to the 129th east meridian in 1825, the Northern Territory was incorporated in that colony, but in 1863 it was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1st January, 1911. The total area is 523,620 square miles.

2. **Population.**—(i) *Population excluding Full-blood Aborigines.* At the Census of 30th June, 1954, the population of the Territory, excluding full-blood aborigines, was 10,288 males, 6,181 females, 16,469 persons. Corresponding figures at the Census of 30th June, 1947, were 7,378, 3,490 and 10,868 respectively. The estimated population, excluding full-blood aborigines, at 30th June, 1958, was 19,579 persons.

The European population of the Territory increased slowly from 670 at the Census of 1881 to 3,767 in 1918. By 1921, it had decreased to 2,458, and in 1933 was still only 3,306. At the Census of 1947, it had risen to 9,116, an increase of 176 per cent. on the 1933 figures, while at the Census of 1954 it had risen a further 54 per cent. to 14,028.

Although at one time there were more than 4,000 Chinese in the Territory, at 30th June, 1954, there were only 325, and these comprised the major proportion of the 486 full-blood non-European inhabitants, excluding Australian aborigines, at that date.

The half-caste population recorded at the Census of 1954 numbered 1,955, of whom 1,659 were half-caste Australian aborigines. Corresponding figures at the 1947 Census were 1,364 and 1,247 respectively.

(ii) *The Aborigines.* The total number of full-blood aborigines at 30th June, 1958, was estimated at 16,100, of whom approximately 3,800 were in regular employment. The Aborigines Ordinance was replaced by the Welfare Ordinance which came into operation on 13th May, 1957. Under the Aborigines Ordinance, all aborigines were, as a race, deprived of citizenship rights and could only attain them by individual exemption from the legislation. The Welfare Ordinance recognizes that from birth they are Australian citizens and temporarily deprives of full citizen rights only those who are committed by name as wards of the State under processes laid down by law. Such committal is subject to the right of individual appeal. This is the same basic idea that is expressed in social legislation applying to those members of the white community who are not able to look after themselves or who have to be protected (e.g., neglected children). Aboriginal reserves comprise an area of 69,458 square miles. (See also Chapter IX.—Population.)

§ 2. Legislation and Administration.

On 1st January, 1911, the Territory was transferred from South Australia to the Commonwealth. The terms were outlined in Official Year Book No. 15, page 940. For particulars of the administration up to the Northern Territory (Administration) Act 1931, by which it was for the second time placed in the hands of an Administrator, see Official Year Book No. 38 and earlier issues.

The Northern Territory (Administration) Act 1910–1959 provides for the constitution of a Legislative Council consisting of the Administrator as President, six official members, three nominated non-official members and eight elected members. The Council makes ordinances for the Territory, which must be submitted to the Administrator for assent. The Administrator may, or may not, assent to them, or he may reserve them for the Governor-General. The Governor-General may disallow any ordinance assented to by the Administrator within six months from the date of assent, and the operation of ordinances relating to certain matters including Crown lands and aboriginal affairs is dependent on his approval. Money votes may be proposed in the Council only by the Administrator himself, or by his permission or direction.

The Territory elects a member to the House of Representatives, who has the right to take part in debates but, until recently, had no voting rights. In 1959, amendments were made to the Northern Territory Representation Act to give this member limited voting rights.

§ 3. Physiography.

1. **Tropical Nature of the Country.**—The Territory is within the torrid zone, with the exception of a strip about 180 miles wide which lies south of the Tropic of Capricorn.

2. **Contour and Physical Characteristics.**—The low flat coast-line seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl and laterite form the occasional cliffy headlands. The sea frontage of more than 1,000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries. The only practicable deep-water port, however, is Darwin.

Inland, the country generally is destitute of conspicuous landmarks. From the coast, there is a general rise southwards to the vicinity of the 17th or 18th parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea and those that form the scanty supply for the interior systems. Towards the centre of the continent, the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

§ 4. Climate, Fauna and Flora.

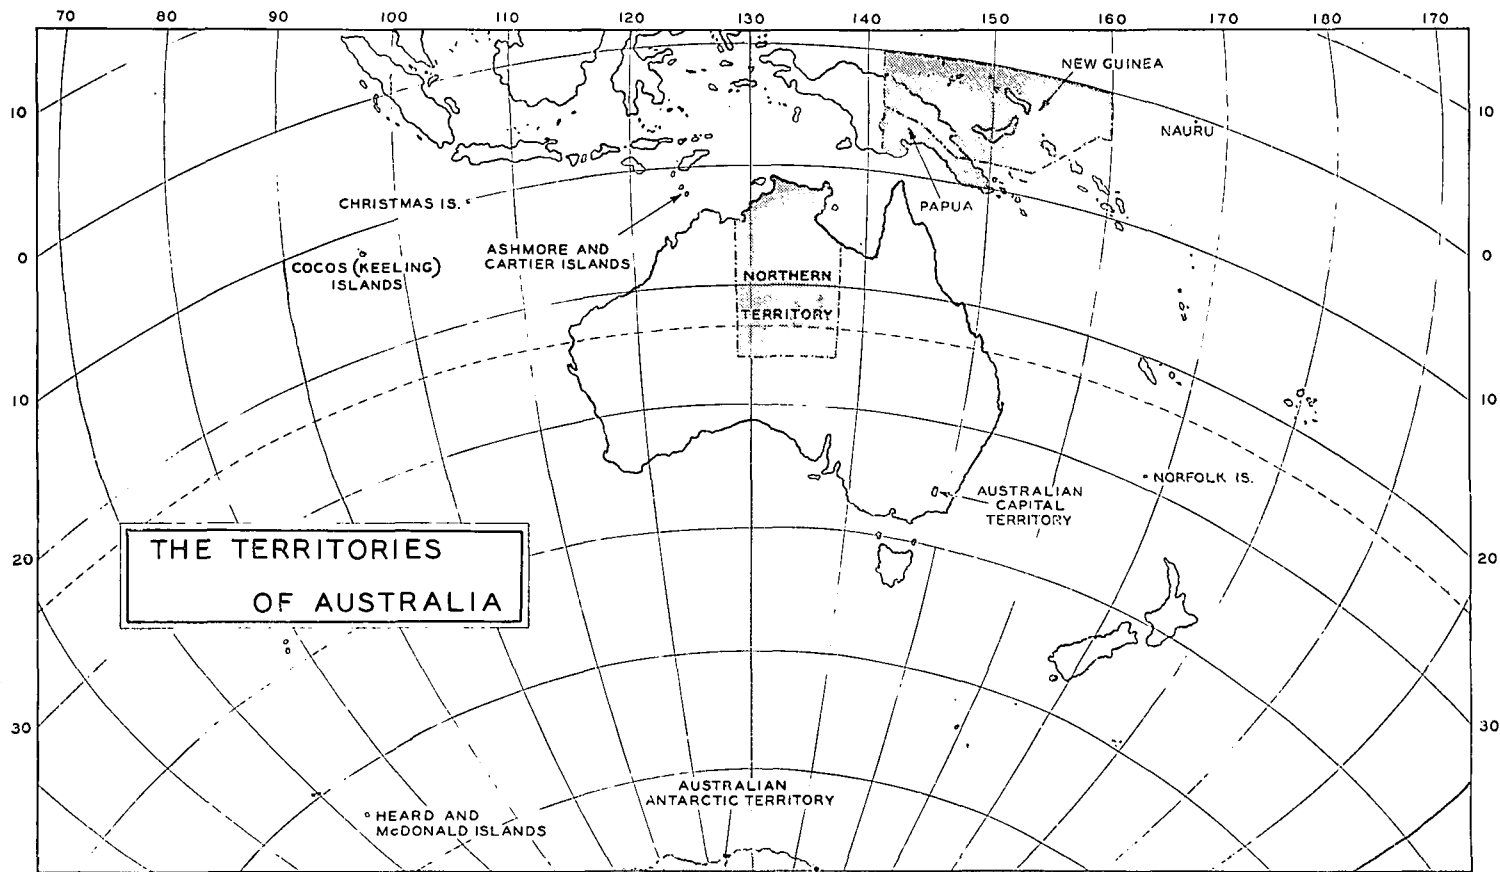

1. **The Seasons.**—There are two main climatic divisions, the wet season, November to April, and the dry season, May to October, with uniform and regular changes of weather. Nearly the whole of the rainfall occurs in the summer months. Further particulars appear in Official Year Book No. 6, page 1116.

2. **Fauna.**—The ordinary types of native Australian fauna inhabit the Territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous) and frogs abound. There are many varieties of fresh-water fish and littoral mollusca. Butterflies and beetles are strongly represented. The termite is a pest which is capable of serious damage to wooden buildings unless special preventative measures are taken. A species of the ant builds anthills which sometimes attain great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Some types of native fauna are protected. Buffalo formerly existed in large herds, but their number has been greatly reduced by indiscriminate shooting. Buffalo shooting is now controlled by Ordinance.

3. **Flora.**—The vegetation is North Australian in type, but a number of the forms belong to the Malayan and Oceanic regions. The timber trees are not of great commercial value, but in the coastal regions tropical vegetation grows luxuriantly to the water's edge. In the north, cypress pine, bloodwood and paperbark timbers are now cut and milled for local building purposes. These three timbers are resistant to termites. On the wide expanses of plain country in the interior, there is little vegetation, the principal orders represented being:—*Euphorbiaceae*, *Compositae*, *Convolvulaceae*, *Rubiaceae*, *Goodeniaceae*, *Leguminosae*, *Utricaceae*.

§ 5. Production.

1. **Agriculture.**—Up to the present, agriculture has made little progress in the Territory, although rice, peanuts, tobacco, grain sorghum, bananas, pineapples, citrus, mangoes, papaws, vegetables, fodder plants and improved pastures can be grown in certain areas. At the present time, commercial agricultural production is practically confined to peanuts, which have been an export crop for some time, and vegetables and small-scale fruit production mainly pineapple and citrus) for local consumption.

In 1946, the Commonwealth Scientific and Industrial Research Organization commenced scientific surveys to define more accurately the potentialities of the Territory. Surveys have been completed of the Katherine-Darwin, Barkly Tablelands and Victoria River Regions. The survey of the Katherine-Darwin Region indicated that further investigations into agricultural possibilities were warranted. As a result, the Commonwealth Scientific and Industrial Research Organization established an agricultural research station at Katherine to investigate the possibilities of dry farming in a land system covering an area of about 7,000 square miles in the Katherine-Daly River basin. The research work at this station was sufficiently encouraging in respect of the production of peanuts, grain sorghum, and pastures to warrant investigations into the application of the findings on a commercial scale. To further the investigations, the Commonwealth Government approved of the establishment by the Northern Territory Administration, in 1952, of an experimental farm at Katherine for the purpose of carrying out trials with these crops to determine the requirements for farming them on a commercial scale. The trials are in progress but it is too early to make any definite pronouncements. In 1956, the Administration established an experimental farm at Berrimah, near Darwin. Investigations into fruit and vegetable growing and pasture production are being carried out under both dryland and irrigated conditions.

The survey of the Katherine-Darwin Region also indicated various soil types in other parts of the Region on which agricultural production tests would be worthwhile. In order to carry out these tests economically and quickly, the Administration, in 1952, organized a mobile unit for the purpose of conducting trials on five soil types with pineapples, peanuts, sorghum, tobacco and other crops. This type of trial is now carried out by agricultural field officers of the Administration in various areas of the Territory considered potentially suitable for agriculture.

Prospects for rice growing were indicated by the survey and, in 1952, the Administration established rice research stations at Humpty Doo and at a location known as Sixty Mile, on the Stuart Highway, 60 miles from Darwin. From the 1959-60 season, rice research work will be carried out in the Territory by the C.S.I.R.O. as well as by the Administration. Because of flooding difficulties in the wet season, rice quarantine for the Northern Territory is carried out by the C.S.I.R.O. at the Kimberley Research Station, Western Australia. At the rice research stations, it has been demonstrated that rice can be grown in the Territory but that the main problems are adequate water control and drainage, determination of cultivation techniques in the soil conditions, and the production of suitable rice varieties. Since the 1954-55 season, Territory Rice Limited, a firm with Australian and American capital, has been conducting large-scale trials near Humpty Doo to prove its theory that commercial production of rice is possible on the sub-coastal plains of the Territory.

2. Pastoral Industry.—The pastoral possibilities of certain parts of the Territory were recognized at an early date and in 1866 stock were brought into the Macdonnell Range country from South Australia. Six years later, cattle were moved from Queensland to the northern parts of the Territory and in 1879 Giles reached the Katherine River with 2,000 head of cattle and 12,000 sheep from South Australia. For various reasons, sheep-raising was not very successful. The cattle industry, however, progressed steadily and the expansion of the industry is continuing.

Cattle exported during 1957-58 numbered 129,276—82,113 to Queensland, 36,085 to South Australia, 9,194 to Western Australia and 1,884 to the Philippines. Other livestock exports included 209 horses, 55 bulls and 20 pigs. Imports of livestock were—Bulls 1,068; stallions, nine; other horses, 154; rams, 27; other sheep, 4,797; and pigs, 60.

The estimated numbers of livestock in the Territory at the end of the years 1953 to 1955 and at June, 1957 and 1958, are given in the table hereunder:—

NORTHERN TERRITORY: LIVESTOCK.

As at—	Horses.	Cattle.	Sheep.	Pigs.	Goats.	Camels.	Donkeys.	Mules.
31st Dec. 1953 ..	36,985	966,033	31,232	1,132	12,502	53	1,475	626
„ „ 1954 ..	33,035	968,755	28,644	911	11,152	50	661	364
„ „ 1955 ..	37,306	1,027,819	33,249	1,076	12,273	59	755	363
30th June 1957 ..	38,180	1,175,997	30,466	755	11,189	51	450	286
„ „ 1958 ..	38,668	1,243,588	26,795	3,071	9,938	56	372	324

3. **Hides and Skins.**—The numbers of hides and skins exported from the Territory during 1957–58 were as follows: buffalo, 110; sheep, 2,801; crocodile, 1,005, and cattle, 3,109.

4. **Mining.**—During 1958, the value of output of the mining industry in the Territory, excluding uranium mining, was £2,450,000. This, however, was slightly lower than the record production of £2,626,000 achieved by the industry in 1957.

The mining of copper ores and concentrates is the most important in terms of value of output and accounts for more than half of the Territory's total recorded production. Prior to 1956, gold minerals, first mined in 1869, accounted for most of the value of output but in recent years production has remained relatively constant while copper production has increased. The bulk of the copper and gold is won at Tennant Creek where, in 1958, the government battery was re-opened to encourage mining by smaller operators.

Uranium minerals were first discovered at Rum Jungle in 1949, and other deposits have been found since. Production of uranium concentrates at Rum Jungle commenced in 1954 and, during 1959, uranium concentrates were produced at other plants from ores mined on the South Alligator River. The production of manganese and salt, which commenced in 1955 and 1957 respectively, is used in the treatment of uranium ores.

The Harts Range field in Central Australia continues to produce the bulk of Australian high grade mica but production is declining. Production of tin and wolfram concentrates, important in the past, is now negligible.

The following table shows the value of output of the mining industry in the Territory for the years 1954 to 1958:—

NORTHERN TERRITORY: VALUE OF OUTPUT (a) OF THE MINING INDUSTRY.
(*Excluding Uranium.*)
(£'000.)

Year.	Copper Ore and Concentrate.	Gold. (b)	Manganese Ore.	Mica.	Other.	Total All Minerals.
1954	115	839	..	121	70	1,145
1955	611	866	28	64	122	1,691
1956	1,360	1,032	29	42	131	2,594
1957	1,524	973	20	50	59	2,626
1958	1,295	993	84	47	31	2,450

(a) Selling value at point of sale of mine products less transport costs from mine to point of sale.
(b) Ore, concentrate, bullion, alluvial gold, etc.

5. **Pearl Fisheries.**—In 1884, mother-of-pearl-shell was discovered in the harbour of Port Darwin. Since that time, the areas fished have extended to the various banks to seaward and coastwise along the Northern Territory coast. Figures for production and value of shell for the seasons ended January, 1954 to 1958, are shown in the following table:—

NORTHERN TERRITORY: PEARL FISHING. (a)

Season Ended January—	Boats Engaged.	Pearl-shell Taken.	
		Quantity. ('000 lb.)	Value. (£'000.)
1954.. ..	10	371	95
1955.. ..	9	343	89
1956.. ..	10	311	74
1957.. ..	10	585	146
1958.. ..	11	753	135

(a) Excludes operations of Queensland and Japanese pearlers operating in Northern Territory waters.

§ 6. Land Tenure.

1. **General.**—A description of the system of land tenure in force in the Territory in 1928 is given in Official Year Book No. 22, Chapter V.—Land Tenure and Settlement. It was revised in Official Year Book No. 39, pages 329–30, and Chapter IV.—Land Tenure and Settlement, of this issue contains up-to-date statistical information on the subject.

Almost half the land in the Territory is reserved, or unoccupied and unreserved, the remainder, apart from a very small proportion alienated, being held under various forms of lease or licence, which are described briefly below and in more detail in Official Year Book No. 39, pages 329–30.

2. *Pastoral, Agricultural, etc., Leases.*—*Pastoral Leases*—granted for periods not exceeding 50 years.

Pastoral Homestead Leases—granted in perpetuity but available only to persons who intend to reside *bona fide* on the leased land. Companies are not eligible to hold this type of lease.

Agricultural Leases—granted in perpetuity, with the area for any one lease limited according to the type of farm (Cultivation farms, Class 1, 1,280 acres, Class 2, 2,560 acres; Mixed farming and grazing, Class 1, 12,800 acres, Class 2, 38,400 acres).

Leases of Town Lands—except in Darwin, granted in perpetuity (in Darwin granted for periods up to 99 years).

Special Purpose Leases—granted for periods up to 99 years, for purposes other than pastoral, agricultural or mining, or private residential purposes within a town.

Agricultural Development Leases—granted for periods up to 30 years for the purpose of large scale agricultural development.

Church Lands Leases—granted for church purposes at a nominal rental in perpetuity.

Leases to Aborigines—granted for areas not exceeding 160 acres each for any period of years upon such terms and conditions as thought fit.

Leases to Mission Organizations—granted for periods up to 21 years.

Miscellaneous Leases—granted for any prescribed or approved purpose, for periods not exceeding 21 years.

Grazing Licences—granted to graze stock on Crown lands for periods not exceeding one year.

Occupation Licences—granted for manufacturing, industrial or any prescribed purposes, for periods not exceeding five years.

Miscellaneous Licences—granted for periods not exceeding one year.

The foregoing leases and licences are granted at specified rentals or rentals fixed by the Administrator and subject to re-appraisal, and under various prescribed or specified conditions.

3. *Mining Leases, etc.*—*Holdings under Miners' Rights*—entitling the holder, for a fee of 5s. for 12 months from the date of issue, to take possession of and occupy Crown lands for mining purposes.

Gold-mining Leases—granted for a period of 21 years, renewable for further periods of 21 years, for areas not exceeding 20 acres each, at an annual rental of 5s. an acre for the first year and £1 an acre thereafter and with payment of a royalty of 3d. in the £1 on the value of gold won, or 6d. in the £1 if on Aboriginal Reserves.

Mineral Leases—granted in blocks not exceeding 40 acres each, at an annual rental of 5s. an acre, with term, renewal, and royalty conditions as for gold-mining leases.

Dredging Claims—granted for gold or minerals claims, the area not exceeding 300 acres each, at an annual rental of 2s. an acre and with payment of a royalty of 6d. in the £1 on the value of minerals won if on Aboriginal Reserves.

Petroleum Prospecting Permits—granted to search for oil over one, two or three areas not exceeding in the aggregate 10,000 square miles for an initial term not exceeding 12 months with provision for extensions in three-year periods up to a maximum of 10 years. The permittee must lodge a fee of £100 and enter into a bond for at least £1,000 to comply with the conditions of the permit and the provisions of the Petroleum (Prospecting and Mining) Ordinance 1954-1957 and the regulations thereunder.

Petroleum Licences—confer an exclusive right to carry out the detailed surveys and other operations necessary to test the land for petroleum. A licence is granted only to a permittee for a fee of £20 over an area not exceeding 2,500 square miles upon the permittee entering into a bond of at least £5,000 to comply with the provisions of the licence and the Ordinance and Regulations.

Petroleum Leases—granted only to a licensee for a period of 21 years, and renewable for further periods of 21 years, in respect of an area not exceeding 500 square miles. The lessee is required to pay a royalty of 10 per cent. upon the gross value of all crude oil produced.

Coal Licences—granted to search for coal over an area not exceeding 1,000 square miles for a period of five years, at an annual fee of £10.

Coal Leases—granted for a period of 21 years, renewable for 21 years at an annual rental of 1s. an acre and a royalty fixed by regulation.

Business and Residence Areas—granted at the prescribed fee, authorizing the holder to occupy on a gold or mineral field an area not exceeding one acre for residence and carrying on business (one-quarter of an acre if for residence only).

Garden Areas—granted under prescribed conditions, on a gold or mineral field for growing fruit or other garden produce, the area of each garden not exceeding 5 acres.

There are various conditions regarding working, employment and value of machinery used, which apply to the foregoing leases and licences.

§ 7. Trade, Transport and Communication.

1. **Trade.**—No record is kept of the trade between the States and the Territory. In the post-war years 1945-46 to 1948-49, direct overseas imports averaged about £200,000 a year, but in the four years 1950-51 to 1953-54, the average was about £625,000 a year. Imports totalled £1,088,697 in 1957-58 and £1,058,998 in 1958-59, while direct overseas exports amounted to £655,617 in 1957-58 and £360,682 in 1958-59.

2. **Shipping.**—Shipping services to Darwin are provided from the eastern States at intervals of about six weeks by ships of the Australian National Line and from Western Australia twice a month by ships of the Western Australian State Shipping Service. Oversea tankers visit Darwin approximately ten times annually with supplies of aircraft fuel and other petroleum products. Other overseas vessels call at irregular intervals. During 1957-58, 68 calls were made by vessels at Darwin, landing approximately 51,646 tons of merchandise and 64,063 tons of petroleum products.

3. **Air Services.**—At 30th June, 1958, there were 25 government aerodromes and 87 licensed aerodromes in the Territory. Darwin is a first-class international airport. Qantas Empire Airways Ltd. and British Overseas Airways Corporation operate, through Darwin, a Sydney-Singapore-London passenger and freight service. The Air France service from Paris to New Zealand via Saigon and the K.L.M. and Air India, London-Singapore-Sydney services also call at Darwin. Regular inland services to Darwin with, in some cases, intermediate stops at Territory centres are operated by Trans-Australia Airlines (from Adelaide, Melbourne, Sydney and Brisbane), and MacRobertson-Miller Airways Ltd. (from Perth and Wyndham). MacRobertson-Miller Airways Ltd. and Connellan Airways Ltd. operate a network of air services throughout the Territory, the latter company's base being at Alice Springs. The Royal Flying Doctor Service also operates aircraft, while charter services can be secured at Darwin and Alice Springs.

4. **Railways.**—The Commonwealth Railways Commissioner, under the Commonwealth Railways Act 1917-1957, operates the Central Australia Railway from Port Augusta to Alice Springs over a distance of more than 750 miles, of which about 200 are in the Northern Territory. The Commissioner also operates the North Australia Railway between Darwin and Birdum on a 3 ft. 6 in. gauge over a distance of 317 miles. The two inland terminals, Alice Springs and Birdum, are about 630 miles apart and are connected by road transport along the Stuart Highway. A road-rail freight service operates between Adelaide and Darwin.

The Clapp plan for the standardization of Australian railways recommended, *inter alia*, the construction of a standard gauge (4 ft. 8½ in.) strategic and developmental railway between Dajarra (Queensland) and Birdum, and the conversion to standard gauge of the Birdum-Darwin line, but not the conversion of the Port Augusta-Alice Springs line nor the construction of a 4 ft. 8½ in. line between Alice Springs and Birdum. Provision for both of the last two projects, however, was included in an agreement with South Australia enacted in 1949.

5. **Roads.**—During the war, roads were built connecting Alice Springs with Darwin, and Mount Isa (Queensland) with Tennant Creek. The first of these roads, known as the North-South Road or Stuart Highway, is 954 miles long, and runs via Larrimah and Tennant Creek. The Mount Isa-Tennant Creek Road (Barkly Highway) is 403 miles long and joins the Stuart Highway some 16 miles north of Tennant Creek. Both were used extensively during the war and the Stuart Highway, in particular, experienced very heavy and continuous traffic. The highways are now used for carrying various freights including cattle, particularly to and from the railheads at Alice Springs, Birdum and Mount Isa. The routes are used also for overland tourists and travellers from the southern States to Darwin. With the further development of the pastoral and mining industries in the Territory, road trains are now being used on both highways for the export of cattle and ore. Both roads have good water bores and communications. There are now approximately 12,000 miles of road in the Territory of which 1,325 miles are sealed.

6. **Posts, Telegraphs, Telephones and Wireless.**—Postal communication is maintained by road and rail transport between Darwin and the capital cities of Australia. In addition, vessels belonging to the Western Australian State Shipping Service provide a regular service

between Fremantle and Darwin. Mail is also carried between the capital cities of Australia and Darwin by the airway companies operating in each State. Inland, the northern part of the Territory receives its mail via Darwin or by means of the aerial services, and the southern districts are served via Adelaide.

The overland telegraph line, covering a length of 2,230 miles, runs in a northerly direction from Adelaide to Darwin, and links Darwin in telegraphic communication with other parts of the world.

Long-distance telephone communication is established between Darwin and the capital cities of Australia, and oversea telephone communication through Sydney or Perth is also available.

Regional national broadcasting stations are situated at Darwin and Alice Springs. The majority of homesteads on pastoral leases are equipped with pedal wireless sets operated under licence from the Postmaster-General's Department. These stations are in daily communication with Flying Doctor Bases situated at Alice Springs (Northern Territory), Wyndham (Western Australia), Broken Hill (New South Wales) and Cloncurry (Queensland), and are used for transmission of radio-telegrams and other communications.

§ 8. Education.

1. **European.**—Schools for European and part-European children in the Territory are conducted for the Commonwealth, on an agreed basis of reimbursement, by the South Australian Department of Education which is represented in Darwin by an Assistant Supervisor of Education, Northern Territory Schools.

At 30th June, 1958, there were 12 Government schools in the Territory with 2,762 pupils, providing instruction according to the South Australian curriculum. Classes up to the Leaving Certificate are provided at Alice Springs and at Darwin there is a separate High School with classes up to the Leaving Certificate.

Children of primary and pre-Intermediate secondary standard who live more than 10 miles from an established school receive an allowance of £80 per annum plus fare concessions if they board away from home in order to attend school. Nine exhibitions are available annually on the results of the Intermediate Certificate, the maximum benefits being £110 per annum and annual return fares if the recipients are required to board away from home in order to attend school.

Approximately 140 children receive correspondence education under the South Australian Correspondence School system. The "School of the Air" supplements normal correspondence instruction for certain children. Some of these live as much as 500 miles distant from Alice Springs, from which point the "School of the Air" is conducted. Two twenty-minute sessions and one half-hourly session are given each day and a unique feature of the "School of the Air" is the "Question and Answer" section which forms a part of every session. Children with access to radio transceivers are able to ask questions of their teacher and all other pupils listen to the answers. One session a week is for pre-school children.

Nine pre-school centres have been established in the Territory. Of these, eight reach the required standards for subsidy by the Administration of the amount of the salary of a trained pre-school teacher. Seven centres occupy buildings specially erected for the purpose at the expense of the Administration, and another centre occupies a building purchased by the Administration. Two scholarships are offered each year for Territory girls to qualify as pre-school teachers.

2. **Special Aboriginal Schools.**—The social, cultural and educational background of the aboriginals has made necessary the establishment of special schools for them. It is envisaged that this necessity will ultimately pass. As from the beginning of the 1956 school year, control of these schools passed from the Commonwealth Office of Education to the Welfare Branch of the Administration. Eleven schools have so far been established. A special syllabus and series of readers have been prepared for use in these schools. Free mid-day meals, milk and school clothes are supplied to the pupils. In addition to the eleven Administration schools, fourteen schools for aboriginal children are conducted by Missions with the aid of Government subsidies. Also, two schools aided by Government subsidies and two unsubsidized schools have been established on pastoral properties and the establishment of others along similar lines is planned.

3. **Theoretical Training of Apprentices.**—The recognition that technical school training is an extension of workshop training has led to the introduction of day-time classes which apprentices attend without loss of pay. Apprentices are directed by the Apprentices Board to undertake correspondence courses conducted by the Technical Correspondence School of the South Australian Education Department and the Sydney Technical College, these courses covering the work prescribed for the various trades in South Australia and New South Wales.

§ 9. Native Welfare.

The Welfare Ordinance, which came into operation on 13th May, 1957, established the principle that native people would be committed to the care of the State only on the grounds of their need for special care and assistance and not on the grounds of race or colour and it laid on the Director of Welfare a positive responsibility for the advancement of wards in his care. The Employment Ordinance provides for the training of wards and assistance in establishing them in occupations, either on their own account or as employees. The Ordinance envisages, among other forms of training, apprenticeships for the better-educated wards and training on the job for those wards not yet capable of entering into apprenticeships. It also envisages financial aid to natives or groups of natives who, under the guidance of the Director, may be able to engage in activities (for example in agriculture, cattle raising, hunting or fishing) on their own behalf. The Director of Welfare is responsible for supervising employment for the wards in his care, and protective legislation for those in employment is retained. The legislation does not, of course, apply to any persons who are not wards and native people who have ceased to be wards will come within the normal industrial customs of the country.

§ 10. Finance.

Details of revenue and expenditure of the Territory for the years 1953–54 to 1957–58 are shown below. The information given covers the transactions of the Commonwealth Consolidated Revenue Fund relating to the Northern Territory and the transactions of the North Australia Railway.

(c) Railways Loan Redemption and Conversion Expenses. (d) Not comparable with previous years, see Note (e). (e) Includes expenditure on Mosquito Prevention and Cemeteries formerly included under Public Health and on Botanical Gardens formerly included under Territory Administration.

THE AUSTRALIAN CAPITAL TERRITORY.

1. *Introductory.*—Information regarding the selection and establishment of Canberra as the Australian capital city, the physiography of the Territory and its early history will be found in earlier issues of the Official Year Book—*See* List of Special Articles, etc., at the end of this volume under “Canberra” and “Federal Capital City”.

On 12th March, 1913, the official ceremony to mark the start of operations in connexion with the establishment of the Seat of Government was carried out. At this ceremony, the selection of “Canberra” as the name of the capital city was announced.

On 9th May, 1927, Parliament House at Canberra was officially opened by His Royal Highness Albert, Duke of York—afterwards His Majesty King George VI.—the occasion being the 26th anniversary of the opening of the first Parliament of the Commonwealth at Melbourne by His Royal Highness George, Duke of Cornwall and York—afterwards His Majesty King George V.—on 9th May, 1901. (For particulars of the opening ceremony *see* Official Year Book No. 21, p. 604.)

The development of the Territory administration prior to the taking over of control by the Federal Capital Commission on 1st January, 1925, is described in summarized form in Official Year Book No. 18, and in Official Year Book No. 22 a summary is given of the administrative activities of the Federal Capital Commission. The administration of the Territory by this authority was continued until 30th April, 1930, when the Seat of Government (Administration) Act 1924–1929 was repealed, and the powers and functions of the Commission reverted to the Government.

Since April, 1932, the general control of the Territory has been exercised by the Minister for the Interior, certain specific services, however, being undertaken by the Department of Health, the Department of Works, the Attorney-General's Department, and the National Capital Development Commission.

An amendment to the Seat of Government Acceptance Act in 1938 provides that the Territory shall be known as the Australian Capital Territory.

2. *Progress of Work.*—(i) *General.* The National Capital Development Commission Act 1957 provided for a Commission to take over from the Departments of the Interior and Works the functions of the acquisition of land and the planning, development and construction of the City of Canberra as the National Capital of the Commonwealth. The Commission commenced operations on 1st July, 1958, work and construction being carried out under the supervision of the Department of Works on behalf of the Commission.

The total expenditure on capital and maintenance works in the works programme amounted to £11,201,511 in 1958–59.

The combined labour force of the Department of Works and contractors working for the Department totalled 3,246 men at 30th June, 1959.

(ii) *Works Programme.* (a) *Housing.* During 1958–59, 1,290 dwelling units were completed, all being built by contract. The number of houses of each type completed was as follows:—Brick 466, brick veneer 189, brick flats 354, timber 29, monocrete 133 and masonry veneer 119. Of the total units built, 283 were built in the suburb of Campbell, 198 in Dickson, 192 in Lyneham, 176 in Braddon, 127 in Turner, 95 in Barton and 68 in Ainslie. The remaining 151 were built in Deakin, Griffith, Narrabundah, O'Connor, Pierces Creek, Reid, Yarralumla and Woden. More than 98 per cent. of the units built were for the National Capital Development Commission. At 30th June, 1959, there were 447 houses and 514 flats under construction.

(b) *Other Building.* Major projects completed during the year 1957–58 included primary schools at North Ainslie and Lyneham, the administrative building, the brick-works reconstruction programme, a transport depot and electrical workshops at Kingston, completion of the Canberra abattoirs, a new office block at Barton, and the Manuka telephone exchange.

At 30th June, 1959, the new Lyneham High School was 76 per cent. complete. Other major building works under construction at 30th June, 1959, were the erection of a primary school at Red Hill, extensions to Telopea Park High School, Goodwin Homes at Ainslie, a military instruction wing at the R.M.C., Duntroon, W.R.A.N.S. quarters at H.M.A.S. *Harman* and a dental clinic.

(c) *Engineering Works and Services.* The length of city roads at 30th June, 1959, was 235 miles, comprising three miles of concrete, 178 miles of bitumen paved and 54 miles of gravel. At the same date, the length of city footpaths was 203 miles. During 1958-59, about 35 miles of city roads were sealed and road maintenance works included the resealing of 16 miles of city roads. Major projects were the completion of the Wattle Street bridge in O'Connor and two bridges on the Cooma Road. Other projects carried out were the construction of a parking area at the Administrative Block and a 12" concrete apron at the R.A.A.F. Station, Fairbairn. Considerable maintenance work and alterations were carried out on all city and country roads.

During 1958-59, 86,930 feet of water mains were laid to reticulate water services to new buildings. At 30th June, 1959, 10,261 houses were connected to the water supply system and of this number 9,959 were metered. The consumption for 1958-59 was 2,247 million gallons with an average daily consumption of about 147 gallons per head.

The six million gallon storage reservoir at Weetangera Road was completed during the year and construction commenced on the new dam on the Upper Cotter River, the design of which is unique in Australia in that it is a thin double curvature concrete arch structure with overlapping spillway. Other projects were the commencement of a one million gallon reservoir at Russell Hill and the completion of water mains to Queanbeyan, Ginninderra and the Weetangera Road reservoir.

During 1958-59, 65,400 feet of sewer mains were laid to connect newly built houses to the sewerage system and 9,978 houses and buildings had been connected to the sewerage system by 30th June, 1959.

3. *Forestry.*—A considerable amount of reafforestation work has been undertaken and plantations (mainly *Pinus radiata*) have been established at Uriarra, Mount Stromlo, Pierce's Creek, Green Hills and Kowen. Experimental plots have been established in the Brindabella mountains and soil conservation areas at various locations throughout the Territory.

The total area of softwood plantations at 31st December, 1958, was 20,700 acres, of which 18,700 acres were *Pinus radiata*, the balance consisting of other softwood species, chiefly *Pinus Ponderosa* and *Pinus nigra*.

Forestry operations in the Territory were begun on Mount Stromlo in 1915. Plantings up to 1925 were chiefly on decorative lines, but since then a much wider programme has been undertaken. Sawmill timber is now being obtained mainly from thinning operations. The yearly output of pine logs has increased from 2,500 cubic feet in 1930-31 to over one million cubic feet at the present time, the total amount cut to date being about 10.5 million cubic feet. The present output consists of approximately 50 per cent. logs yielding building material, and 50 per cent. case-making material.

In 1926, a comprehensive review was undertaken of the Territory's potentialities for forest development. The existing forest area has been placed under management and a considerable amount of survey and assessment work has been completed, resulting in the extension of operations, including fire protection, to 100,000 acres of hardwood forests in the Cotter catchment area. Hardwood log production during 1958 amounted to over 240,000 cubic feet, all of which was used in building operations in Canberra. The total amount of hardwood cut from Australian Capital Territory forests to date is about 3,254,000 cubic feet.

4. **Lands.**—(i) *General.* Reference has been made in previous issues of the Official Year Book to the general conditions of land tenure in the Territory and to the area of alienated and leased land, and Chapter IV.—*Land Tenure and Settlement*, of this issue contains statistical information on the subject.

Under the Seat of Government (Administration) Act 1910, Crown lands in the Territory may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of that Act. Leases of land in the city area are granted under the City Area Leases Ordinance 1936–1957, and leases of other lands under the Leases Ordinance 1918–1958. Land is also leased for various purposes in the city area under the Church Lands Leases Ordinance 1924–1932 and the Leases (Special Purposes) Ordinance 1925–1943, while one lease under the Church of England Lands Ordinance 1926 has been granted for church purposes.

Under the City Area Leases Ordinance 1936–1957, the Government may grant leases of any Crown land in the city area for business or residential purposes. Such leases may be issued for a period not exceeding 99 years at a rental equal to five per cent. per annum of the unimproved value of the land, which value is subject to re-appraisal at the expiration of 20 years, and thereafter every 20 years. A suitable building must be commenced within six months and completed within 12 months unless an extension of time is allowed.

As considerable portions of the Territory lands are not immediately required in connexion with the establishment of the city, large areas have been leased for agricultural or grazing purposes. Leases may be granted for grazing, dairying, fruitgrowing, horticulture, agriculture or other purposes for periods not exceeding 50 years. The annual rental is 5 per cent. of the assessed value of the land inclusive of rates, the rental being subject to re-appraisal every 10 years.

(ii) *Jervis Bay Territory.* The Commonwealth acquired from the State of New South Wales sovereign rights over the area comprising about 28 square miles of land and water at Jervis Bay for possible use as a port in connexion with the Australian Capital Territory. The Royal Australian Naval College was established in this area on a site known as Captain's Point, but was removed in 1930 to Flinders Naval Base, Victoria. It was, however, re-established at the original site as from the beginning of 1958. Some 13,000 acres of land in the Jervis Bay area, mostly of little value agriculturally, have been leased for short terms from time to time, chiefly for grazing purposes. The natural forest is being utilized for the production of hardwood building material and the area treated is being reforested with softwoods on an experimental basis.

5. **Transport and Communication.**—Canberra is connected with the railway system of New South Wales at Queanbeyan by a line $4\frac{1}{4}$ miles long. This line was opened for goods traffic on 25th May, 1914, and for passenger traffic on 15th October, 1923. The railway terminus is situated in the suburb of Kingston. A daily passenger service operates between Canberra and Sydney and Canberra and Melbourne.

Two airlines provide several services daily each way on the Sydney–Canberra–Melbourne route.

Regular motor-coach services link Canberra with towns in New South Wales, Victoria and South Australia.

There are three radio broadcasting stations in the Territory, 2CY and 2CN of the national broadcasting system and 2CA, a commercial station.

6. **Population.**—From 1911 until 1921, the population of the Territory remained at about 2,000 persons. In 1922, it commenced to rise, and by 1927 was nearing 6,000. The following year, with the transfer of departments from Melbourne, it passed 8,000.

The population at the Census of 30th June, 1947, was 16,905 persons—15,156 in the city area, 1,389 in the rural districts and 360 in the Jervis Bay area—and at the Census of 30th June 1954, it was 30,315 persons, 28,277 being in the Canberra city area and 517 in the Jervis Bay area. At 30th June, 1959, a population count showed that there were 43,973 persons in the Canberra city area. At the same date the estimated population of the Territory was 46,070.

7. **Production.**—During 1958–59, the production of the more important items of the agricultural and pastoral industry was—Wheat, 39,816 bushels; wool, 2,522,000 lb; whole milk 968,000 gallons; meat (bone-in weight, fresh), 3,424 tons. The numbers of livestock depastured at 31st March, 1959, were—Horses, 690; cattle, 9,408; sheep, 271,892; and pigs, 175.

8. **Education.**—The Australian Capital Territory Education Ordinance provides for the compulsory attendance at school of children between the ages of six and fifteen years. The Commonwealth Department of the Interior is primarily responsible for the education of children in the Australian Capital Territory. By agreement, however, the New South Wales Department of Education arranges the teaching programme in accordance with its own curriculum and provides the teaching staff. It is reimbursed for expenses incurred.

At 31st October, 1959, there were three public secondary schools in Canberra providing courses to the Leaving Certificate standard, Canberra High School, Acton; Telopea Park High School, Barton; and Lyneham High School, Lyneham; while fourteen schools provided courses for children in infants and primary classes, including two in the Jervis Bay area and three in rural districts. A school for mentally handicapped children was opened early in 1955.

At the same date, there were nine private schools in Canberra. Of these, St. Edmund's Christian Brothers College, Catholic Girls High School, Canberra Grammar School (Boys) and Canberra Church of England Girls' Grammar School provide courses leading to the Leaving Certificate Examination.

Eighteen pre-school centres, including an occasional care centre and a mobile unit which visits outlying areas provide pre-school facilities for approximately 1,400 children between the ages of three and five years.

The Canberra Technical College, which follows the curriculum set by the New South Wales Technical Education Department, provides trades courses for apprentices, vocational (non-trades) courses including accountancy, women's handicrafts, and sheep and wool courses, hobbies courses including ceramics, dressmaking, art, woodwork and motor maintenance, and courses for Commonwealth authorities, including workshop practice for Royal Military College cadets, motor maintenance for Australian Forestry School cadets and shorthand and typing courses for the Public Service Board. In addition, the Technical College undertook the trade testing of migrants seeking to enter skilled trades.

Education at university level is provided by the Canberra University College, details of which will be found in Chapter XV.—Education.

An area of about 250 acres has been set aside at Acton for the Australian National University. Provision has been made for the University to establish such research schools as may be thought desirable, including a School of Medical Research, and Research Schools of Physical Sciences, Social Sciences and Pacific Studies. Further reference to this University appears in § 8 of Chapter XV.—Education.

9. Finance.—Details of revenue and expenditure for the years 1953–54 to 1957–58 as recorded in the Commonwealth Consolidated Revenue Fund are given in the following table:—

AUSTRALIAN CAPITAL TERRITORY: REVENUE AND EXPENDITURE.

(a) Transactions in Australian Capital Territory Electricity Supply Trust Account. (b) Not available separately. Included in "Sale of Houses" and "Other." (c) Includes Interest. (d) Other than Capital Works and Services. (e) Payment to Australian Capital Territory Transport Trust Account (loss on omnibus service). (f) Includes loss on operations, 1953-54, £24,000; 1954-55, £7,500; 1955-56, £7,500; 1956-57, £15,000; and 1957-58, £30,000. (g) Excludes repairs and maintenance. (h) Not available. (i) Includes restoration of bushfire damage, 1953-54, £53,701; 1954-55, £3,582; 1955-56 £1,391; 1956-57 and 1957-58, nil.

The following table, which was prepared by the Department of the Interior, shows the total receipts and expenditure of the Australian Capital Territory from 1911-12 to 30th June, 1958:—

AUSTRALIAN CAPITAL TERRITORY: RECEIPTS AND EXPENDITURE TO
30th JUNE, 1958.

Receipts.	£	Expenditure.	£
Commonwealth Treasury—		Lands	936,169
Parliamentary Appropriations—		Engineering works	18,800,571
Revenue	65,602,871	Architectural works	27,516,926
Loan	5,689,024	Other capital expenditure, sundry debtors, etc.	4,596,366
			51,850,032
		Seat of Government Establishment Account, being maintenance and administration less revenue; ex- penditure of a capital nature for which assets no longer exist; profit and loss accounts of trading activities, etc.	19,441,863
Total Receipts	71,291,895	Net Expenditure	71,291,895

(a) Excludes interest £6,771,657.

The foregoing figures exclude part cost of national buildings (Parliament House, the Secretariats, etc.), the Federal Highway within the Territory, the Queanbeyan-Canberra Railway, the housing loan, etc.

NORFOLK ISLAND.

1. **Area, Location, etc.**—Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude $29^{\circ} 3' 30''$ S., longitude $167^{\circ} 57' 5''$ E. Its total area is 8,528 acres, the island being about 5 miles long and 3 miles wide. From Sydney, it is distant 930 miles, and from Auckland, 660 miles. The length of the coast line is 20 miles, and its form that of an irregular ellipse. Except for a portion on the south side and the landing place at Cascade on the northern side, almost inaccessible cliffs rise from the water's edge. The climate is equable, the temperature ranging between 49° and 85° F. with a mean of 68° F. The average annual rainfall is 53 inches. It has been said that the healthy climate together with the beauty of its landscapes and seascapes, should make Norfolk Island "the Madeira of the Pacific".

2. **Settlement and Population.**—The first colonization, in 1788, was by Lieutenant King of H.M.S. *Supply*, who established a small penal station on the island as a branch settlement of that at Port Jackson. The settlement was abandoned in 1813 and for 13 years thereafter the island was used chiefly as a whaling station and place of call for British warships.

From 1826 to 1855, it was again a penal station. In 1844, it was annexed to Van Diemen's Land (Tasmania).

The descendants of the *Bounty* mutineers, having become too numerous to subsist on Pitcairn Island, were removed to Norfolk Island in 1856. The new community, numbering 94 males and 100 females, were the descendants of British sailors and Tahitian women. The last of those transferred died at Norfolk Island on 1st March, 1943. The population of the island as disclosed by the Census of 30th June, 1954, was 942, consisting of 478 males and 464 females. The estimated population at 30th June, 1958, was 1,033 persons.

3. **Administration.**—In 1856, the island was created a distinct and separate settlement under the jurisdiction of New South Wales. In 1896, it was made a dependency under the Governor of that Colony, and finally, by the passage of the Norfolk Island Act 1913, it was accepted by the Federal Parliament as a territory of Australia. From July, 1914, until 1st January, 1929, Norfolk Island was administered by the Department of Home and Territories, and then, until 25th June, 1941, by the Territories Branch of the Prime Minister's Department, but it is now controlled by the Minister for Territories through an Administrator. An amending measure, the Norfolk Island Act 1935, provided for the establishment of an Advisory Council of eight elected members which may advise the Administrator on matters affecting Norfolk Island.

The Norfolk Island Act 1957, which came into operation on 7th April, 1960, provides for variations in the administrative and judicial arrangements of the island. It also provides for a local government body, The Norfolk Island Council, which will replace the existing advisory council, but will retain its advisory functions in addition to having a certain autonomy in local government matters on the island.

4. **Economic Activity.**—The major economic activities of the island are primary production, whaling, the tourist trade and employment by Government instrumentalities.

(i) **Primary Industries.** The soil on the island is particularly fertile, the climate equable, and the rainfall fairly evenly distributed except for a pronounced dry period in November. This enables a wide range of temperate and semi-tropical products to be cultivated. However, the island's comparative isolation and trading difficulties with New Zealand hamper production. A relaxation of some restrictions enabled out-of-season fruit and vegetables up to a limit of 3,000 lb. a week to be sent by air freight to Auckland, but the air service was reduced to fortnightly from August, 1956.

Prior to 1939, the principal primary product was passion fruit pulp. However, the introduction of disease, together with the high cost of trellising and land reclamation, has led to the curtailment of this industry. The production of bean seed has now become the main export industry. The island's isolation from many plant diseases found on the mainland, plus the fairly reliable dry period (which is conducive to the setting and maturing of seed), together with improved prices, induced a rapid expansion of production. In 1958–59, 3,922 bushels were exported, but owing to a surplus in Australia, considerable quantities were unsold in October, 1959. The conditions on Norfolk Island also favour the production of other types of seed.

Island conditions are also conducive to good pasture growth but, for a number of reasons, meat production is insufficient to satisfy the demands of both the tourists and the local inhabitants. However, as a joint product of pastoral pursuits, quantities of hides and wool are exported.

Fish and, in certain months, whales abound off the island. In the past, a number of ventures have been formed to exploit these resources. They have been short-lived owing, for the most part, to the lack of a sheltered harbour. However, a modern whaling station was started on the island in 1955 and production commenced during the second half of 1956. The quota of 150 humpback whales in 1956, 120 in 1957 and in 1958 and 150 in 1959, was caught and processed at the station.

An active forestry programme is being carried out to increase the resources of Norfolk Island pine and to introduce suitable types of eucalypts.

(ii) *Tourists.* The unique history and unusual beauty of the island had always attracted a number of tourists. Before the 1939–45 War, the only means of transport to the island was by ship, but the building of the aerodrome in 1943 made the island far more accessible and a tourist industry has developed which is at present limited only by the accommodation available. Approximately 120 can now be catered for.

(iii) *Government Instrumentalities.* A large proportion of the population is employed by Commonwealth Government instrumentalities, namely:—Department of Civil Aviation, Norfolk Island Administration, Overseas Telecommunications Commission and Department of the Interior (Meteorological Branch). The bulk of the finance for the operation of these instrumentalities is supplied by the Commonwealth Government and this greatly increases the income of the island.

5. *Trade, Transport and Communication.*—Imports to Norfolk Island in 1938–39 amounted to £27,590, mainly from Australia. Since the 1939–45 War, they have risen from £32,402 in 1945–46 to £237,059 in 1957–58. In 1957–58, the major proportion (£212,646 or 90 per cent.) still came from Australia, while New Zealand supplied £24,413 or 10 per cent. Exports were valued at £16,970 in 1938–39, and have risen from £9,024 in 1945–46 to £175,951 in 1957–58. The big increase is due mainly to the commencement of operations by the whaling station in the 1956–57 season. Australia was again the principal country concerned, exports thereto amounting to £166,520, while exports to New Zealand amounted to £4,312.

No duties are chargeable on goods imported into Australia from Norfolk Island if the goods are (a) the produce or manufacture of Norfolk Island; (b) shipped direct to Australia; and (c) not goods which if manufactured or produced in Australia would be subject to excise duty.

A shipping service to the island is maintained at approximately seven-week intervals by Burns Philp & Co. Ltd., Sydney. The route is from Sydney via Norfolk Island to the New Hebrides, Solomon Islands and other island groups and thence back to Sydney. Shipping between the island and New Zealand is infrequent.

The construction of the aerodrome on the island was completed during 1943. A fortnightly passenger and air freight service between Sydney and Norfolk Island maintained by Qantas Empire Airways Ltd. extends to New Zealand under charter to Tasman Empire Airways Ltd.

There are approximately 50 miles of usable road on the island. As a substantial section of the population possesses private motor cars, and taxi-cab services are available, transport is almost exclusively by motor vehicle.

The cable from Great Britain via Vancouver, Fanning Island, and Fiji bifurcates at Norfolk Island, one line connecting with New Zealand, the other with Brisbane. Until 10th June, 1947, the post office at the island was part of the Commonwealth postal system, but as from that date Norfolk Island was established as a separate postal administration with its own issue of stamps.

6. *Social Condition.*—Education is free and compulsory up to the age of fifteen years. The school conforms to the Australian standard of public education, ranging from kindergarten to the intermediate certificate, with a two years' super-primary course of instruction in cultural subjects and in woodwork, needlework, leatherwork, basketry and hat-making. The headmaster and assistant teachers are lent by the New South Wales Education Department, but they are paid by the Norfolk Island Administration. The number of scholars enrolled at 30th June, 1958, was 150. Dental examination and free dental service are provided for school children.

The Court of Norfolk Island is a court of record with dual jurisdiction. Sitting in its limited jurisdiction, the Court has power to hear and determine actions of claims not exceeding £30 and to punish summarily all crimes and offences involving a pecuniary penalty or a sentence of imprisonment not exceeding six months. In its full jurisdiction, the Court can hear and determine all actions, punish all crimes and offences, grant probate and letters of administration, hear and determine appeals from any conviction of the Court sitting in its limited jurisdiction, and exercise authority in all other matters. An appeal lies to the High Court of Australia from any judgment, order, decree or sentence of the Court sitting in its full jurisdiction when constituted by a Judge or the Chief Magistrate.

7. **Finance.**—The revenue of the Territory, together with an annual grant from the Commonwealth Government for administrative expenses, is paid to the credit of the Norfolk Island Trust Fund, and advances for administrative and developmental expenses are drawn from the account. The principal sources of revenue in 1957–58 were:—Commonwealth subsidy, £33,133, customs duties, £10,439, sale of liquor, £8,721. The total revenue was £69,237. Items of expenditure in 1957–58 were:—administrative, £23,030; miscellaneous services, £25,016, repairs and maintenance, £7,162, capital works and services, £7,616, postal services, £3,507. Total expenditure amounted to £66,331.

PAPUA AND NEW GUINEA.

§ 1. Administration.

Following the outbreak of war, civil administration in Papua and in New Guinea was suspended on 11th February, 1942, and military control commenced. The Territory of New Guinea came under Japanese occupation in 1942, but the greater part had already been recaptured by Australian and Allied Forces when the Japanese surrendered in August, 1945. Information relating to the transfer back from military to civil control under the Papua-New Guinea Provisional Administration Act 1945–1946 may be found in Official Year Book No. 39 and earlier issues.

The Papua-New Guinea Provisional Administration Act 1945–1946 was repealed by the Papua and New Guinea Act 1949 which came into force on 1st July, 1949. The latter Act approved the placing of the Territory of New Guinea under the International Trusteeship system and provided for an Administrative Union of the Territory of Papua and the Territory of New Guinea with one Administrator, one Supreme Court and one Public Service.

Provision is made for an Executive Council of not less than nine officers of the Territory, who shall be appointed by the Governor-General, and a Legislative Council consisting of twenty-nine members, namely:—(a) the Administrator; (b) sixteen officers of the Territory (who shall be known as official members); (c) three non-official members possessing such qualifications as are provided by Ordinance and elected, as provided by Ordinance, by electors of the Territory; (d) three non-official members representing the interests of the Christian missions in the Territory; (e) three non-official native members; and (f) three other non-official members.

The Legislative Council was inaugurated on 26th November, 1951, by His Excellency Sir John Northcott, while Administrator of Australia.

Subject to the Act, provision may be made by Ordinance for the establishment of Advisory Councils for Native Matters and Native Village Councils.

The Act also makes provision for the continuance of the existing laws of the Territory of Papua and the Territory of New Guinea.

§ 2. Finance.

The following table shows particulars of the financial operations of the Papua and New Guinea Administration for the years 1953–54 to 1957–58. Further information on each Territory will be found on pages 131 and 136.

§ 3. Agriculture and Animal Industry.

1. **Soils.**—Although a large proportion of Papua and New Guinea is covered by skeletal soils unsuitable for agriculture, there are extensive areas in all parts where fertile soils occur, suitable for growing a wide range of crops. Most of the agriculture of the Territory up to the present has been on soils on the coastal plains, which, apart from the swamp soils, consist mainly of alluvium and podsolized alluvium. So far, these have been mostly under coconut plantations, although other crops such as rubber and cocoa have also been grown. The swamp soils, of which there are extensive areas in the Delta plains and other parts of the Gulf of Papua, and in smaller areas, are found intermittently around the coasts and along the lower reaches of the rivers, and are in general quite unsuited to any form of agricultural development.

Volcanic soils probably offer the greatest prospects for development. They are found mostly on the Central Plateau and southern foothills of the main island, but there are also areas in New Britain (particularly in the Gazelle and Willaumez Peninsulas), Bougainville and New Ireland, as well as in numbers of smaller islands. Other rich soils are the alluvials of the river valleys. The largest single area of this type is in the trough occupied by the Ramu and Markham Rivers.

2. **Climate.**—The climate, particularly the rainfall, over so wide an area as Papua and New Guinea, with its numerous islands and varying elevations, naturally presents many variations. Generally speaking, the climate is moist and tropical, except at high altitudes. There are only small differences in both daily and seasonal extremes. The Territory has no winter and summer, and thus no great variation in day-length over the year. The two seasons which are experienced are generally described as the "south-east" and the "north-west", corresponding with the periods of the year when the south-east trade winds and the north-west monsoons direct the main Territory air-flow. The south-east season prevails approximately from May to October, the trade winds attaining maximum velocities during July and August. The north-west monsoon operates over a considerably shorter period, between the end of December and about March. During the periods between these seasons, November and early December, and about March to April, there are two short spells of calm weather.

Rainfall varies considerably, from an average annual rainfall of 245 in. at Gasmata in New Britain and 231 in. at Kikori in Papua, to about 88 in. at Wewak in New Guinea and 40 in. at Port Moresby.

Although the Territory has no summer and winter, it has a wide temperature range, due to differences in altitude, varying from an absolute highest temperature of about 100° F. along the coast, to freezing point on its highest peak, Mt. Wilhelm (15,400 ft.).

Humidity in the Territory is very high throughout the year. Some coastal stations register an average relative humidity of more than 90 per cent. Humidities below 60 per cent. are rare at coastal stations, average figures varying from 80 per cent. at 9 a.m. to 65 per cent. at noon and 75 per cent. at 3 p.m. Humidity in mid-mountain forests appears to be higher than in the lowlands, while in the mossy forests there are periods when the whole belt is saturated.

3. **Suitable Crops.**—The crops which can be grown in Papua and New Guinea include coconuts, rubber, tea, coffee, cocoa, jute, kenaf, manila hemp, sisal, rice, pepper, tobacco, peanuts, kapok, cassava, ginger, cinchona, nutmeg, vanilla, tropical fruits and vegetables, sago and tung oil, but of these, the only crops of any commercial importance are coconuts, coffee, cocoa and rubber.

4. **Plantation Agriculture.**—*Coconuts.* Territory coconut plantations suffered severely from damage and neglect during the 1939–45 War, but rehabilitation was rapid and, in 1957–58, about 500 plantations together with native coconut stands produced 71,831 tons of copra valued at £4,521,159 for export. In addition, 14,802 tons of coconut oil valued at £1,472,997 and about 8,705 tons of coconut meal and cake valued at £176,506 were exported in 1957–58. A copra crushing mill was established at Rabaul in 1952. Native stands produce about 25 per cent. of the copra exported.

Rubber. Rubber exports have increased from an average of 1,352 tons a year during the three years 1937–38 to 1939–40 to 4,259 tons in 1957–58, valued at £1,114,716.

Cocoa. Exports of cocoa beans increased from 207 tons in 1949–50 to 2,589 tons in 1957–58, valued at £828,458.

Coffee. Exports of coffee beans increased from 21 tons in 1949–50 to 385 tons in 1957–58, valued at £225,059.

5. **Native Agriculture.**—Most of the native inhabitants of Papua and New Guinea are agriculturalists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude, and include yams, taro and sweet potatoes, coconuts, bananas, papaws, maize, sugar-cane, cassava, beans, peanuts, rice, cucurbits and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas, it is cut largely from naturally occurring stands. In other parts of the country, small areas of sago are grown along stream banks and in swampy patches and are regarded as a reserve in times of poor harvest. In recent years, the natives have taken up the production of introduced crops such as peanuts, rice, cucurbits and maize for their own consumption and cocoa and coffee for export. In coconut areas, large quantities of copra are produced. In 1958–59, native copra production was estimated at about 24,400 tons.

In many localities, the natives follow a farming system known as "Bush Fallowing Rotation". The inhabitants of each village have, at any one time, a number of distinct and separate cleared garden areas in the land surrounding the village. The garden clearings may be located some miles from the village and are not usually contiguous. Each garden

area may be made up of a number of distinct plots owned by individual natives or families. Communal ownership of gardens is rare. The number of garden clearings (and their area) attached to each village depends on the size of the village and the fertility of the land.

The method of cultivation followed is for the jungle trees to be felled and undergrowth cleared with axes and knives, the larger trees being usually left standing. The timber and foliage is allowed to dry out and then burnt. In some localities, there is a little cultivation before the crops are planted, and root vegetables are placed in holes dug with a stick. In other places, however, there is careful preparation of the soil. Some weeding is done while the crops are growing. After harvesting, a second crop is rarely planted immediately in that garden area, but a new area of land is selected, cleared, burnt and planted. The natives return to the first area to harvest fruit from trees, such as papaw and banana, that may have been planted in the garden, but these are soon submerged in the new growth which quickly appears. The plot is allowed to lie fallow for a number of years, the period varying from 7 to 10 years or even longer, depending upon the local population pressure. During this time, high secondary jungle has probably grown. Ultimately the natives return to the original plot, and clear, burn and plant again. The cycle continues year by year throughout the agricultural land belonging to the village. The foregoing is a broad generalization of the method followed. There are, however, many variations.

The business of growing food is done by both the men and women. The division of work is usually clearly defined within the village itself but this division is not necessarily the same in all areas. Generally it is found that felling the forests is always done by the men, and carrying the harvested food home to the village is nearly always done by the women. Other work, however, such as cultivating, planting and weeding may be done by either men or women according to the customs of the particular village or area.

The advancement of native agriculture for local food supply and improved land use in village gardens, as well as for economic production of crops for sale, has a high priority in Government policy for the Territory.

6. Animal Industry.—Owing to loss by fire of records on which previous figures were based, comparable statistics for livestock populations at 31st March, 1958, are not available. Livestock species in the Territory include cattle, sheep, goats and pigs, approximate figures for each species being:—cattle, 13,000; sheep, 1,500; goats, 5,000; and pigs, 5,000. Other livestock includes horses, mules and poultry. These figures represent European-owned livestock only; native-owned livestock consists almost entirely of pigs and poultry.

A number of British breeds of cattle are represented in Territory herds. For dairying, Jersey and Australian Illawarra Shorthorns are most popular; Black Polled, Polled and Horned Shorthorns, and Red Polled cattle are raised for meat production. Under good management these breeds have done well in the Territory.

Most of the sheep now in the Territory are Romney Marsh breed located at Nondugl in the highlands of New Guinea.

The introduction of rabbits, foxes, hares and monkeys into the Territory is prohibited.

7. Co-operative Societies.—The following table sets out details of the number of societies, members, etc., for the year ended 31st March, 1959:—

CO-OPERATIVE SOCIETIES: YEAR ENDED 31st MARCH, 1959.

Type of Society.	Number of Societies.	Number of Members.	Turnover.	Rebates to Members.	Total Capital.	Total Fixed Assets.
			£.	£	£	£

Dual Purpose Societies ...	181	47,228	637,792	15,455	359,963	48,115
Total	220	72,730	817,414	16,691	443,085	70,466

PAPUA.

§ 1. General Description.

1. **Early Administration.**—Particulars of the early administration of Papua are given in Official Year Book No. 19, page 576.

2. **Administration by the Commonwealth of Australia.**—The Territory was placed under the authority of the Commonwealth on 1st September, 1906, by proclamation issued in pursuance of Letters Patent of 18th March, 1902, and was accepted by the Commonwealth by the Papua Act, 1905, which came into force by virtue of the aforesaid proclamation. The transfer was made under the authority of Section 122 of the Constitution. The Territory is now under the control of the Commonwealth, but not included within it, and is divided into six magisterial districts, Southern Highlands, Western, Gulf, Central, Milne Bay and Northern.

3. **Area, etc.**—Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Tagula and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Strait. The length of Papua from east to west is upwards of 920 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerably narrower. The Territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux and Louisiade groups. The length of coast-line is estimated at 3,664 miles—1,728 on the mainland, and 1,936 on the islands. The total area is about 90,600 square miles, of which 87,806 are on the mainland, and 2,794 on the islands. A reference to the physical characteristics of the Territory appears in previous issues of the Official Year Book (*see* No. 18, p. 633).

§ 2. Population.

1. **Non-indigenous Population.**—At the Census of 30th June, 1954, the non-indigenous population of Papua was 3,867 males, 2,446 females, 6,313 persons. Corresponding figures at the Census of 30th June, 1947, were, respectively, 2,057, 1,182, and 3,239.

The European population of Papua increased slowly, and with some reversals in trend, from less than 700 in 1906, the year in which the Territory came under Commonwealth control, to 1,343 at the Census of 1921. It numbered only 1,148 at the 1933 Census, but at the 1954 Census amounted to 5,295 (3,372 males and 1,923 females).

The non-European section of the non-indigenous population at 30th June, 1954, was 1,018, of whom 34 were full-bloods and 984 were half-castes with one of the parents a European. Comparable figures as at the 1947 and 1933 Censuses, respectively, were:—full-bloods—194 and 786; half-castes—503 and 227.

The estimated non-indigenous population at 30th June, 1958, was—Males, 5,085; females, 3,470; Europeans, 7,518; Asians, 12; and Others (mainly half-caste), 1,025; Total, 8,555.

2. **Native Population.**—It is not possible to give exact data regarding the number of natives, because part of the interior is not as yet under complete Government control. However, the enumerated and estimated population of the Territory of Papua at 30th June, 1958, numbered 478,595 persons. This comprised 334,395 enumerated persons (177,092 males and 157,303 females) and 144,200 estimated. The total number was distributed through districts as follows:—Southern Highlands, 137,425; Western 51,023; Gulf (including the former Delta district), 67,843; Central, 89,024; Milne Bay, 85,331; and Northern, 47,949.

§ 3. Native Labour, Taxation and Health.

1. **Native Labour.**—The laws relating to the employment of natives are uniform in Papua and New Guinea, and are contained in the Native Labour Ordinance 1950–1956. They provide for the engagement of natives under a permit. Permits are issued by a District Officer, and authorize the holder to engage natives for employment on his own behalf, or on behalf of a registered employer who has authorized him to act on his behalf. Under this Ordinance, a native may be issued with a Native Assistant's Permit, which authorizes him to solicit natives to work for his employer, or for other employers who have authorized him to act on their behalf.

Natives are employed under written agreements which have been sanctioned and attested by a District Officer. The period of the agreement must not exceed two years, but one further agreement, for a period not exceeding one year, may be drawn up, if both parties desire it. The period, in both cases, begins on the day on which the agreement is sanctioned and attested. Both parties may, by mutual consent, and with the approval of a District Officer, cancel an agreement. On the termination of an agreement, employers are required to repatriate workers to their own villages.

Natives under the age of sixteen years may not be employed. Employers must provide native employees with housing, medical attention, food and clothing free of charge. A minimum monthly wage of twenty-five shillings and a working week of 44 hours are prescribed by Ordinance. Provision is also made for compensation in the case of injury or death.

2. Taxation.—The main forms of taxation are income tax, personal tax and import duties.

Income tax was imposed on 1st August, 1959, to operate from 1st July, 1959. The scale of taxation is about 50 per cent. of the tax payable on the same taxable income in Australia. Deductions for dependents the taxpayer is maintaining and maximum deductions for medical, dental and educational expenses are considerably higher than those allowed in Australia. The tax on public companies is at a flat rate of 4s. in the £ which is a little over half the predominant rate of company tax in Australia, while on private companies the rate is 2s. 6d. in the £1 for the first £5,000 and 3s. 6d. for the remainder and generally, comparable deductions are allowed. On 1st January, 1958, a Personal Tax was introduced for all males (including non-indigenous) of 18 years of age and over, in Papua and New Guinea. The maximum tax is £2 per annum; the tax assessed is subject to the taxpayers' ability to pay and consequently large areas have been exempted. Native Local Government Councils (which are formed voluntarily by the natives) are however, empowered to levy taxes on villagers for the purpose of providing for local services carried out by the Councils. These taxes are set off against the native's Personal Taxation.

3. Health.—The Department of Public Health has the general oversight of all medical and dental services. It maintains a large number of hospitals, which are staffed by fully-trained European medical personnel and trained native assistants, for both European and native patients. The Department has adequate facilities for research in tropical medicine.

At 30th June, 1958, there were in the Territory three European hospitals (one privately controlled); 47 native hospitals (one private and 22 Mission); one mental hospital; 340 village aid posts (114 Mission); 101 welfare clinics (49 Mission); and two Hansenide colonies. The Missions employ their own doctors and nurses in their medical establishments. A training school has been established at Port Moresby, in association with the Port Moresby General Hospital, for the purpose of training natives in first aid, elementary physics, chemistry, anatomy, physiology and pathology in preparation for their employment as Native Medical Assistants. Natives are also attending the Central Medical School at Suva, Fiji, to be trained as Native Medical Practitioners and for other medical occupations. The chief complaints treated in hospital are malaria, yaws, tropical ulcers, respiratory infections, hookworm, venereal and skin diseases.

§ 4. Land Tenure.

The basic principle of the land laws of Papua is that all land not specifically alienated by due process from the natives, or established to be vacant and ownerless, is native land. At 30th June, 1959, of the total estimated area of Papua, approximately 58,000,000 acres, only 1,839,944 acres had been alienated. The distribution of alienated land at 30th June, 1959, according to tenure, was as follows:—Held by private non-indigenous inhabitants—freehold, 24,280 acres, leasehold, 316,167 acres; held by administration, 1,431,300 acres; native reserves, 68,197 acres; total, 1,839,944 acres.

Although, as the figures above show, a small amount of freehold land exists in Papua, no further estates in freehold can be granted under the provisions of the Land Ordinance 1911–1953 of Papua. Leases of various kinds may be granted by the Administration. The principal types of leases available are agricultural leases, pastoral leases, leases of town allotments, business leases and residence leases of other than town allotments, and various forms of special leases and licences over land. Leasehold terms are liberal and, in general, leases may be granted for periods of up to 99 years. Rent is based on the unimproved value of the land. For agricultural leases, the rental rate per annum is 5 per cent. of the unimproved value and for pastoral leases the rate is 2½ per cent. Concessions

regarding freedom from, or reduction of, rents apply during the early developmental periods of agricultural and pastoral leases. All leases are subject to improvement conditions which may be varied or relaxed under certain circumstances. The following classes of leases were in force in Papua at 30th June, 1959:—Agricultural, 666—268,031 acres; pastoral 31—42,437 acres; residence, 161—232 acres; special 271—2,132 acres; mission 390—1,036 acres; business, 151—275 acres; town allotment, 792—347 acres; agricultural leases granted to missions, six—677 acres; total 2,468—315,167 acres.

Leases of Crown land are granted by the Administrator following a land use examination, advertisement of leases available and consideration of applications by the Land Board. Dealings in privately-owned land are a matter for private treaty. Native-owned land, however, cannot be acquired or leased from the native owners by private individuals. The Administration alone may purchase native-owned land, and then only if the owners are willing to sell and the Administration is satisfied that the owners do not require, and are not likely to require, the land.

The registration of titles, interests and dealings in alienated land is provided for under the Real Property Ordinance 1913–1955 modelled on the Torrens system of land registration. A start has been made on the recording of native land ownership under the Native Land Registration Ordinance 1952.

§ 5. Production.

1. **General.**—The products of the Territory are obtained from its agricultural, forestry, mining and fishing industries. Native subsistence agriculture, fishing and hunting produce most of the food requirements of the native population. The main native agricultural products are taro, yams, sweet potatoes, bananas and papaws. Peanuts are becoming of increasing importance in native diet. Non-indigenous enterprise produces most of the commodities exported. Natives, however, do produce copra for export, while native enterprise in other fields of agricultural production for export purposes, e.g., cocoa and coffee, is being encouraged. The principal agricultural products of Papua for the export trade are copra and rubber. Native production of these commodities is increasing. Practically all the timber milled during 1955–56 was absorbed by local building requirements. The main products of fisheries exported from Papua are trochus and green snail shell. Gold, manganese, zinc-lead and copper ores have been mined in commercial quantities in the past but current production is limited.

For the sake of convenience, agricultural and pastoral conditions in Papua and New Guinea have been dealt with as a whole, and reference should be made to pages 128–130 for information on the soils, climate, crops, methods of cultivation, etc., throughout both Territories. The following paragraphs relate to forestry, mining, fisheries and water-power resources in Papua.

2. **Forestry.**—(i) *General.* A general description of the forest policy which applies in Papua as well as in the Trust Territory of New Guinea is given under the heading “Timber” on page 139.

(ii) *Timbers.* Mixed species tropical rain forest covers most of Papua, although north-east of Port Moresby there is an area of monsoonal savannah country. Because of the mixed nature of the timbers in any one area, their utilization on an economical basis is somewhat difficult. Kwila, the most important hardwood found in millable quantities in Papua and New Guinea occurs in important stands east of Port Moresby. Mangroves occur in large areas fringing the Gulf of Papua.

(iii) *Survey Work.* Forestry field work is being carried out in Papua with a view to assessing the forest resources available and to survey areas that will be thrown open for cutting. In the middle of 1956, tenders were called for approximately 50 million super. feet of logs on the Brown River area near Port Moresby, and the contract was subsequently let to a Port Moresby sawmiller.

(iv) *Permits.* At 30th June, 1958, 20 permits and 12 licences were current. The total areas of forest involved were 119,394 acres and 34,508 acres respectively. The total number of mills was 12, and the total sawn-timber produced for the year was 3 million super. feet, most of which was used locally.

3. **Mining.**—(i) *Variety of Minerals.* Although a large number of minerals have been found in Papua including platinum, gold, silver, copper, tin, lead, zinc, cinnabar, iron, osmiridium, manganese, sulphur, chromite, gypsum and lignite, most deposits are not of economic importance.

Gold was discovered in 1888 and has been found since in many parts of Papua. Before the 1939-45 War, gold was an important item in the Territory's production and it was the major export in 1938-39 (valued at more than £150,000), but has dwindled to insignificance since the war. Gold production in 1954-55 was 1,065 fine oz. and in 1955-56 491 fine oz. compared with an average of almost 28,000 fine oz., for the last three pre-war years. During 1958-59, the production of gold realized £6,202, bringing the total value of gold won up to 30th June, 1959, to £3,343,427.

Large quantities of copper ore were mined and exported up to 1940. Good samples of galena (sulphide of lead) have been obtained, but other minerals are not found in commercial quantities.

(ii) *Oil Search.* Since the search for oil began in Papua in 1911, over £30 million has been spent. The existence of petroleum has been traced at scattered intervals over a large area, but commercial quantities have not been discovered. At 30th June, 1959, three companies held petroleum prospecting permits under the provisions of the Petroleum (Prospecting and Mining) Ordinance 1951-1958. Oil prospecting is, at present, confined mainly to the Gulf and Western Divisions.

4. *Fisheries.*—Surveys have been carried out of the fisheries resources of Papua. They have been demonstrated to be considerable and efforts are being made to increase the small degree of utilization. Shell fishing, particularly trochus, provides the main cash return, exports being valued at £43,276 in 1957-58.

5. *Water Power.*—Most of the rivers in Papua carry a large volume of water from a great height over a relatively short distance, thereby offering opportunities for the installation of hydro-electric power plants. It is estimated that there is at least 10 million horse-power available for this purpose.

§ 6. Trade, Transport and Communication.

1. *Customs Tariff.*—The present customs tariff provides high revenue rates on ale, spirits, tobacco and cigarettes, timepieces, cigarette papers, fancy goods and jewellery but allows entry of most necessities affecting living and building costs duty free, or at a low rate of duty. There is a by-law provision under the Customs Tariff to enable duty-free admission to be granted for plant, machinery and chemicals to be used mainly for industrial and developmental purposes and for goods imported by passengers. No preferential rates are specified in the schedule. Export duties imposed on copra, cocoa, rubber, mother-of-pearl, trochus and burgos shell and gold were repealed in July, 1959.

Provision is made in the Australian Customs Tariff (Papua and New Guinea Preference) 1936 for the free entry into Australia of certain goods produced in and imported direct from Papua (*see* Chapter XIII.—Trade), and a proclamation of 25th September, 1935, exempted from primage duty goods produced or manufactured in the Territory.

2. *Imports and Exports.*—(i) *Total Values.* The table below summarizes and compares the values of imports and exports for the years 1953-54 to 1957-58.

TERRITORY OF PAPUA: IMPORTS AND EXPORTS.
(£ f.o.b.)

Particulars.	1953-54.	1954-55.	1955-56.	1956-57.	1957-58.
<i>Imports</i>	5,201,969	7,471,221	8,975,834	8,661,252	8,786,758
<i>Exports</i> —					
Domestic Exports ..	1,683,188	2,517,526	2,965,559	2,261,734	2,082,667
Re-Exports	304,376	308,170	398,976	504,588	693,385
<i>Total Exports</i> ..	1,987,564	2,825,696	3,364,535	2,766,322	2,776,052

(ii) *Imports.* The following table summarizes the countries of origin of imports. Since the 1939-45 War, Australia has supplied a far greater proportion of the imports than was the case pre-war.

TERRITORY OF PAPUA: COUNTRY OF ORIGIN OF IMPORTS.

(£.)

(a) Not available, included in "Other countries".

(iii) *Exports. (a) Countries of Destination.* The countries of destination of Papuan exports are shown below. The decrease during 1956-57 in the value of total exports was due mainly to the decrease in the prices of copra and shell. Australia imports practically the whole of the Territory's production of these items.

TERRITORY OF PAPUA: COUNTRY OF DESTINATION OF EXPORTS.

(£.)

Country of Destination.	1953-54.	1954-55.	1955-56.	1956-57.	1957-58.

Total Domestic Exports ..	1,683,188	2,517,526	2,965,559	2,261,734	2,082,667

3. **Shipping.**—In 1957–58, 157 British vessels and 17 of other nationalities called at Territory ports and discharged 95,019 tons of cargo and loaded 25,667 tons. Corresponding figures for 1956–57 were 163, ten, 93,698 and 26,844 respectively.

Regular passenger and freight services operate between Australia, New Guinea and Papua. Vessels trading between Australia and the East also call at Territory ports, and there are occasional ships to the United Kingdom, vessels of one shipping line trading between the United Kingdom and Australia calling at Port Moresby approximately at quarterly intervals. Coastal and inter-island shipping services are maintained by vessels operating from the two principal ports of Port Moresby and Samarai.

4. **Other Forms of Transport and Communication.**—Air services link Papua with Australia, New Guinea and the British Solomon Islands. There were 48 aerodromes and seaplane alighting areas in Papua at 30th June, 1958, and of these 17 were the responsibility of the Department of Civil Aviation, 21 were operated and maintained by the Administration, and 10 owned and maintained by Missions, plantations and mining interests. Much of the internal traffic and freight is carried on a charter basis. Regular air services operate from Port Moresby to Daru in the West, Samarai and Popondetta in the East, and to various centres in New Guinea.

At 30th June, 1958 there were about 1,456 miles of road in Papua, of which nearly 436 miles were suitable for medium and heavy traffic, the greater proportion being located in the Central and Northern Districts, which are north-east of Port Moresby.

Telephone services operate in the main centres. The radio station at Port Moresby for both transmission and reception is jointly shared by the Overseas Telecommunications Commission and the Administration. The former provides a service between Papua, Australia and the Territory of New Guinea, while the latter operates radio telephone and radio telegraph services from Port Moresby and Samarai to outstations.

Medium and short-wave programmes are broadcast from the Australian Broadcasting Commission stations 9PA and VLT located at Port Moresby.

§ 7. Finance.

The principal source of revenue for the Territory is the annual grant received from the Commonwealth Government, which in 1957–58 amounted to £4,607,669. Customs duties, £969,688 in 1957–58, are next in importance. The total revenue during 1957–58 was £6,406,674 compared with £5,648,104 in 1956–57. Of a total expenditure of £6,401,155 in 1957–58, £3,098,690 was spent on public works, £652,350 on medical services, £332,970 on native affairs, £378,489 on education and £1,938,656 on other votes. Expenditure amounted to £5,585,841 in 1956–57.

For particulars of the finances of the combined Territory administration, *see* page 127.

TRUST TERRITORY OF NEW GUINEA.

§ 1. General Description.

The land area of the Territory of New Guinea is about 93,000 square miles and the area, including the sea, within the lines drawn through its extreme outer points is more than one million square miles. As the coast of the Territory has not been completely surveyed, the areas of the various islands are known only approximately.

The approximate areas of the principal islands, together with the small islands adjacent thereto, are as follows:—North-East New Guinea, also called the mainland, 70,200 sq. miles; Bismarck Archipelago—New Britain, 14,100 sq. miles, New Ireland, 3,340 sq. miles, Lavongai, 460 sq. miles, Admiralty Islands, 800 sq. miles, total Bismarck Archipelago, 18,700 sq. miles; Solomon Islands—Bougainville, 3,880 sq. miles, Buka, 220 sq. miles, total Solomon Islands, 4,100 sq. miles; grand total, 93,000 sq. miles.

Information regarding physiography and climate will be found in *Official Year Book* No. 22, page 613, and in the *Official Handbook of the Territory of New Guinea*.

§ 2. Government.

1. **The Military Occupation (1914–18 War).**—On 17th September, 1914, the Acting Governor of German New Guinea signed terms of capitulation with the officer commanding a Naval and Military Expedition sent from Australia, and thereafter the Territory was under military administration until the establishment of Civil Government on 9th May, 1921.

2. **Mandate (1920).**—In 1919, it was decided by the Principal Allied and Associated Powers that the Territory of New Guinea, which Germany gave up as one of the terms

-of peace, should be entrusted to the Government of the Commonwealth under Mandate from the League of Nations. The issuing of the Mandate was, however, delayed, and it was not until 17th December, 1920, that its terms were settled, and the Mandate itself did not reach Australia until April, 1921.

The terms of the Mandate are given in Official Year Book No. 33 (*see p. 264*).

3. **1939-45 War.**—For the events following the outbreak of the Pacific War and the formation of the Papua-New Guinea Provisional Administration in 1945, *see* page 127 of this chapter and earlier issues of the Official Year Book.

4. **Trusteeship (1946).**—The Commonwealth Government undertook to place the Territory of New Guinea under the Trusteeship System established under the Charter of the United Nations. The Trusteeship Agreement for the Territory, under which the Government of Australia is the sole administering authority, was approved by the General Assembly of the United Nations Organization on 13th December, 1946. The terms of the Agreement are shown in Official Year Book No. 39, pages 355-7.

5. **Administration.**—For particulars of the administration of the Territory of New Guinea prior to the setting-up of the Papua and New Guinea Administration *see* Official Year Book No. 36 and earlier issues.

For administrative purposes, the Territory is divided into the following nine districts:—New Britain, comprising New Britain and adjacent islands; Morobe, Madang, Eastern Highlands, Western Highlands, and Sepik on the mainland; New Ireland, comprising New Ireland, Lavongai and adjacent islands; Manus, comprising the Admiralty Group; and Bougainville in the Solomon Islands. Each district is administered by a District Commissioner.

§ 3. Population.

1. **Non-indigenous Population.**—At the Census of 30th June, 1954, the non-indigenous population of the Territory was 7,201 males, 4,241 females, 11,442 persons. The total non-indigenous population at the Censuses of 1921, 1933 and 1947 was, respectively, 3,173, 5,216 and 6,200 persons. At 30th June, 1958, the estimated non-indigenous population was 9,002 males, 6,071 females, 15,073 persons, of whom 11,110 were Europeans, 2,783 Asians and 1,180 other races.

The European population of the Territory increased from 64 in 1885 to 3,191 at the Census of 1933, and it reached its pre-war peak of 4,608 in 1939. At the 1954 Census, the European population numbered 8,020 (5,185 males and 2,835 females).

Malays seem to have been the first Asians brought by the Germans to German New Guinea; 37 of them were recorded on the mainland in 1885. About 1889, the New Guinea Company began to bring Chinese, Malays and Javanese in growing numbers from Singapore and Java to work on the plantations; in 1892, there were about 1,800 Asians on the mainland. By 1898, the number had decreased to 300 or 400, but it had risen to 1,830 at the time of the 1933 Census, and at 30th June, 1941, numbered 2,228, mostly Chinese. At the Census of 30th June, 1954, non-Europeans numbered 2,404, of whom Chinese (2,192) constituted the major proportion, whilst half-castes with one of the parents a European numbered 1,018.

2. **Native Population.**—The enumerated and estimated native population of the Territory as at 30th June, 1958, numbered 1,326,195 persons, comprising enumerated, 1,223,095 (645,206 males and 577,889 females), and estimated, 103,100. The total population was distributed throughout the several districts as follows:—Eastern Highlands, 323,909 persons; Western Highlands, 242,749; Sepik, 235,884; Madang, 132,323; Morobe, 182,889; New Britain, 102,192; New Ireland, 37,733; Bougainville, 51,764; Manus, 16,752.

§ 4. The Natives.

1. **General.**—The natives are divided into two main groups—Melanesian and Papuan—the former, with a few exceptions, constituting the population of the Bismarck Archipelago, the Solomon Islands, and the coastal districts of the New Guinea mainland, the latter inhabiting the interior of the mainland. Some tribes of Negritos exist in the mountains of New Guinea. There is a strain of Papuan, and possibly, of Polynesian blood in the Admiralty Islanders, while the Western Islanders and the inhabitants of the small islands east and south-east of New Ireland are Micronesians. (*See* Official Year Book No. 16, p. 670, and *Official Handbook of the Territory of New Guinea*, Pt. V.)

2. **Land Tenure.**—There is considerable variation throughout the Territory in the nature of customary ownership of land. In most areas, some rights remain in the landholding group and individuals within the group have limited rights of use, either for life or for a shorter period. Thus the normal system by which the rights of ownership in land use are acquired is by birth to a landholding group. Transfer of rights between individuals by sale and purchase appears to have been unusual in the past, but this practice is now an established custom in some localities and appears to be increasing. Inheritance may be based on either patrilineal or matrilineal descent, or both. In parts of the Territory, however, there is a tendency for the whole inheritance system to change, particularly in communities where it is based on matrilineal descent. In some cases, local government councils are discussing changes in land inheritance systems, and the Administration is also giving attention to the problem.

3. **Research Work.**—Research work among the native peoples of New Guinea was initiated under the German Administration and this work has been continued since on a wider scale.

4. **Education.**—Education in the Territory is provided by the Administration and various Mission organizations. Schools for natives have also been established by Native Village Councils. The Education Ordinance 1952–1957 enables the Administrator to establish an education advisory board, district education committees and European and native schools and to grant financial aid for educational purposes. European teachers are recruited from Australia, and native teachers are trained in the Territory by the Administration and the Missions. During the year ended 30th June, 1958, 184 schools were maintained by the Administration for 11,333 children, of whom 863 were Europeans, 363 Asians, 68 of mixed race and 10,039 natives. The total number of pupils in the various grades of mission schools was 108,046, of whom there were 139 Europeans, 247 Asians and 176 of mixed race. To assist the educational work of the Missions, the Administration provides expert advice, educational equipment, and text-books. In addition, the sum of £118,608 was distributed among the Missions as grants-in-aid during the year ended 30th June, 1958.

5. **Health of Natives.**—The main diseases affecting the native people are malaria, yaws, respiratory diseases, dysentery, tropical ulcers, hookworm and filariasis. The Department of Public Health is engaged in combating these diseases with a staff of fully-trained medical officers, medical assistants and orderlies in native hospitals. Its staff also supervises hospitals on plantations. It has facilities for research in tropical medicine, and schemes for training natives as medical orderlies and nurses. There are 12 European hospitals (2 conducted by Missions) and 104 native hospitals (49 Mission). The Department also provides the Missions with much of their medical stores and supplies, and maintains five Hansenide colonies for the treatment of natives suffering from Hansen's Disease and two Tuberculosis hospitals. There are also two Mission colonies which treat Hansen's Disease. The Department also undertakes the general oversight of sanitary conditions in the Territory.

6. **Missions.**—A number of Mission societies operate in the Territory. The Society of the Sacred Heart of Jesus works in the Bismarck Archipelago, the Society of the Holy Ghost, the Franciscan Order and the Society of the Divine Word along the coast of north-east New Guinea from Sepik to the Dutch border and in the Central Highlands, and the Marists in Buka and Bougainville. These are Roman Catholic Missions. Protestant Missions include the Methodist Overseas Mission in New Britain and New Ireland, the New Zealand Methodist Mission in Bougainville, the Lutheran Mission (supported and staffed by the Lutheran Churches in Australia and America) which works in Morobe, Madang, the Eastern and Western Highlands, New Britain and Manus, the New Guinea Anglican Mission in New Britain, the Seventh Day Adventist Mission in Bougainville, New Britain and the Mainland of New Guinea, the East and West Indies Bible Mission and the Baptist Mission in the Central Highlands. The South Seas Evangelical Mission (Undenominational) and the Assemblies of God Mission are also working in the Sepik area. All these Missions include teaching with their missionary work.

§ 5. Land Tenure.

The principles governing the acquisition and ownership of land and types of tenure available in New Guinea are in general similar to those which obtain in Papua and although, under the Land Ordinance 1922–1951, grants of freehold estates may be made, as a matter of policy all grants are now restricted to leaseholds. In New Guinea, however, the amount of freehold land of earlier origin held by private non-indigenous owners

amounts to more than half a million acres. Freehold titles to this land, which includes a good deal of plantation land, may be transferred by purchase subject only to the general provision that dealings in land require the approval of the Administrator.

The area of the Territory of New Guinea is estimated at 59,520,000 acres, of which at 30th June, 1959, two per cent. was alienated. The following was the distribution of alienated land according to tenure at 30th June, 1959:—held by private non-indigenous inhabitants—freehold, 518,485 acres, leasehold, 318,154 acres; held by Administration, 539,190 acres; native reserves, 26,936 acres; total, 1,402,765 acres.

Leases in force at 30th June, 1959, were as follows:—Agricultural, 779—216,568 acres; dairying, 6—1,300 acres; pastoral, 16—85,637 acres; residential and business, 2,231—1,595 acres; special, 260—8,207 acres; mission 673—2,413 acres; long period leases from German regime, 104—4,515 acres; total 4,069—320,235 acres.

Under German law there was a system of registration of titles in a "Ground Book", but registration did not confer an indefeasible title. The German system has been replaced by one modelled on the Torrens plan, embodied in an Ordinance entitled the Lands Registration Ordinance 1924–55. The land registers were lost during the 1939–45 War but provision for restoration of the lost titles is made in the New Guinea Land Titles Restoration Ordinance 1951–55. A start has been made on the recording of native land interests under the Native Land Registration Ordinance 1952.

§ 6. Production.

1. **General.**—The products of the Territory are obtained from its agricultural, mining, fishing and forestry industries. A joint government-private enterprise copra crushing mill at Toboi, near Rabaul, is producing coconut oil at the rate of about 8,000–10,000 tons a year. At Bulolo, a company (Commonwealth-New Guinea Timbers Ltd.), in which the Commonwealth Government has a controlling interest, is producing high quality waterproof plywood and veneers in a factory whose capacity is over 40 million square feet, on a $\frac{3}{8}$ inch basis, per annum. Native subsistence agriculture, fishing, and hunting produce most of the food requirements of the native population. The main native agricultural products are taro, yams, sweet potatoes, coconuts, bananas and papaw. Non-indigenous enterprise produces most of the commodities exported. Natives, however, produce copra for export and, in recent years, have taken up the production of introduced crops such as peanuts, rice, cucurbits and maize for their own consumption and cocoa and coffee for export. The principal agricultural products of New Guinea for the export trade are copra and cocoa. While most of the timber milled during 1956–57 was absorbed by the local market, exports increased over 1955–56 figures (*see para. 2 below*). The main products of fisheries exported from New Guinea are trochus and green snail shell, including that collected by natives. Gold is the principal mineral mined. Natives are taking an increasing interest in mining for alluvial gold on their own account and production from this source is continually rising, in contrast to falling European production.

For information on the agricultural and pastoral industries, which, for the sake of convenience covers the Territory of Papua and New Guinea as a whole, *see pages 128–130*. The following paragraphs relate to the timber, fishing and mining industries in the Territory of New Guinea.

2. **Timber.**—Various species of timber are found in the Territory, but the only accessible pure stand is the valuable pine forests of the Bulolo Valley. The main use of this timber is for the production of plywood and veneer by Commonwealth-New Guinea Timbers Ltd., which is consuming a little over 10 million super. feet of logs per annum to produce the equivalent of approximately 30 million square feet of plywood on a $\frac{3}{8}$ inch basis (37 million in 1957–58). Exports of plywood in 1957–58 were 26 million square feet, valued at £1,023,000 while veneer exports of 826,000 square feet on a $\frac{3}{8}$ inch basis were valued at £6,600. During the year, one million super. feet of logs (some suitable for plywood manufacture) to the value of £25,000 and three million super. feet of sawn timber valued at £210,000, were also exported. The Territory forests also provided flitches, battery veneer and egg-case parts for export.

The Administration sawmill previously operated at Yalu has been moved to Lae. It and the Administration mill at Keravat in New Britain, provide a considerable amount of sawn timber for local consumption, and serve as a training centre for operatives in the sawmilling industry. The Administration also operates a training centre for forestry workers, nurseries and a herbarium.

The Forestry Ordinance 1936–1951 provides for the issue of permits and licences to cut timber. Present policy calls for the orderly development of the timber industry on sound forestry principles to ensure no waste of the resources and no over-exploitation; the grant

of emergency timber permits for limited quantities to assist in providing timber for Territory requirements; the disposal by public tender of timber areas designated by forest officials of the Territory; and the development of the pine stand in the Bulolo Valley by Commonwealth-New Guinea Timbers Ltd. Timber growing on native lands cannot be acquired by private purchasers direct from the natives but must be obtained through the Administration. Royalty is payable on all forest produce taken under permit or licence. Re-afforestation of areas dedicated for forestry in perpetuity is carried out by the Administration.

At 30th June, 1958, 15 permits and six licences were current, the total area of forest involved being 168,355 acres and 17,239 acres respectively. Twenty-nine sawmills and also some benches on private property were operating.

3. **Fisheries.**—The wealth of the waters of the Territory has been little exploited, but as the result of surveys and the development of the Administration fisheries service, action is being taken to promote increased use of the resources. Fish are caught at many places along the coast to supply the small local demand of the natives and of Europeans. Trochus shell to the value of £59,044 and green snail shell to the value of £8,481 were exported during 1957–58.

4. **Mining.**—The production of gold and associated silver is the most important mining activity in New Guinea. Gold has been discovered on the Waria, the Ramu, the Francisco, and the Markham Rivers, and in tributaries of the Sepik River. Rich gold deposits were first discovered in the Morobe District in 1926; the field is situated about 80 miles (40 by air) inland from Lae, the nearest coastal port. Communication is established with the coast by regular air service and by road transport. Silver is found, usually associated with the gold in these deposits. Osmiridium is reported to have been found on the upper tributaries of the Ramu, and platinum on the Kabenau River. Copper has been discovered in the form of chalcopyrite and malachite in the Baining District. Iron ore occurs as magnetite and haematite in the Baining District, apparently in large quantities. Sulphur occurs in several localities in the volcanic regions of the Territory. Brown coal has been found on the mainland in the vicinity of Astrolabe Bay, and in the southern portion of New Ireland. The commercial production of minerals other than gold and silver has not been undertaken.

The granting of rights, leases and claims for mining purposes is provided for in the Mining Ordinance 1928–1957 and regulations thereunder.

The production of gold in New Guinea during the last three pre-war years averaged about 228,000 fine oz. a year, valued at £2,000,000. In 1940–41, it amounted to 263,113 fine oz., valued at £2,808,835. Although the market price of gold has been fixed at a much higher level than in 1938–39, mining costs have risen to a greater extent and consequently production since the war has been on a much smaller scale, averaging 91,000 fine oz., at a value of £1,200,000 a year over the five years ended 1951–52. Production in 1955–56 amounted to 71,519 fine oz., valued at £1,117,483 and in 1956–57 to 78,856 fine oz., valued at £1,232,128. The slight increase in production during 1956–57 has not been maintained, however, the 1958–59 production being valued at only £707,704.

The Petroleum Ordinance 1936 has been superseded by the Petroleum (Prospecting and Mining) Ordinance 1951–1958, which has facilitated the carrying out of geological surveys and prospecting activities generally. At present only one company has made an application for a permit to search for petroleum in the Aitape area.

§ 7. Trade, Transport and Communication.

1. **Customs Tariff.**—The present customs tariff provides high revenue rates on ale, spirits, tobacco and cigarettes, timepieces, cigarette papers, fancy goods and jewellery but allows entry of most necessities affecting living and building costs duty free or at a low rate of duty. There is a by-law provision under the Customs Tariff to enable duty-free admission to be granted for plant, machinery, and chemicals to be used mainly for industrial and developmental purposes and for goods imported by passengers. No preferential rates are specified in the schedule.

Provision is made in the Australian Customs Tariff (Papua and New Guinea Preference) 1936 for the free entry into Australia of certain goods produced in and imported direct from the Territory of New Guinea (*see* Chapter XIII.—Trade), and a proclamation of 25th September, 1935, exempted from primage duty goods produced or manufactured in the Territory.

2. Imports and Exports.—(i) *Total Values.* The table below summarizes and compares the values of imports and exports for the years 1953–54 to 1957–58.

TERRITORY OF NEW GUINEA: IMPORTS AND EXPORTS.

3. *Shipping.*—Regular passenger and freight services operate between Australia, Papua and the Territory of New Guinea. Vessels trading between Australia and the East also call at Territory ports and there are some ships to the United Kingdom and North America. Coastal and inter-island shipping services are maintained by vessels operating from the principal ports of the Territory. Shipping within the Territory is regulated by the Shipping Ordinances 1951. and the Coastal Shipping, Ports and Harbours Regulations.

Main ports of call for overseas vessels are Lae, Madang and Wewak (mainland), Rabaul (New Britain), Kavieng (New Ireland), Lorengau (Manus), and Kieta (Bougainville). Ports proclaimed under the Coastal Shipping, Ports and Harbours Regulations for the service of local vessels are, in addition to the main ports above-mentioned, Salamaua, Aitape and Vanimo (mainland), Gasmata and Talasea (New Britain), Namatanai (New Ireland), and Buka Passage (Bougainville).

There are no inland waterways and the natural river system is not generally suitable for vessels except those of small tonnage.

In 1957-58, 118 British vessels and 67 vessels of other nationalities called at Territory ports and discharged 130,363 tons of cargo and loaded 148,485 tons. Corresponding figures for 1956-57 were 126, 47, 135,505 and 135,579 respectively.

4. *Other Forms of Transport and Communication.*—There are no railways, but a road construction programme is being undertaken progressively to assist the economic development of the Territory. Road transport services operate in the main towns and on the trunk roads linking Rabaul and Kokopo; Lae, Bulolo and Wau; Kavieng and Namatanai; and on the network in the Eastern and Western Highland Districts centred on Goroka and Mt. Hagen. The total mileage of roads in the Territory of New Guinea at 30th June, 1958; was 4,389, of which 1,412 were suitable for heavy and medium traffic.

Air services link the Territory with Papua, Australia, Netherlands New Guinea and the British Solomon Islands. There are 126 aerodromes and seaplane alighting areas in New Guinea, and of these 26 are controlled by the Department of Civil Aviation, 42 by the Administration, 57 by private interests and one by the Royal Australian Navy.

Telephone services operate in the main centres. Radio telephone trunk circuits link Port Moresby with Lae, Rabaul and Madang and service is available from subscribers telephones in Port Moresby, Lae and Rabaul, and from the Post Office at Madang. Six zone or group centres for radio telephone communication with outstations have been established at Lae, Madang, Rabaul, Kavieng, Wewak and Lorengau. From these centres radio telegraph services are also available to 111 outstations.

§ 8. Finance.

The principal sources of revenue for the Territory of New Guinea are the grant by the Commonwealth Government and customs duties. Total revenue in 1957-58 amounted to £9,114,847, towards which the grant contributed £6,188,821 and customs duties £1,894,125. The major classes of expenditure during 1957-58 were as follows:—Health, £1,225,650; district services and native affairs, £641,078; education, £637,238; civil affairs, £432,243; justice, £237,893; agriculture, etc., £389,552; posts and telegraphs, £361,444; customs and marine, £125,579; forestry, £239,908; public works, £362,116; maintenance, £855,944; capital works and services, £2,063,908. Total expenditure in 1957-58 was £9,114,847 as compared with £8,150,696 in 1956-57.

For information on the finances of the combined Territory administration *see* Papua and New Guinea, § 2, page 127.

TRUST TERRITORY OF NAURU.

1. **General.**—Nauru is an oval-shaped atoll about 12 miles in circumference, having an area of about 5,263 acres, of which approximately two-thirds is phosphate-bearing. It is situated in latitude 0° 32' S. and longitude 166° 55' E. Portion of the island between the sandy beach and the coral cliffs is fertile, and it is there that most of the Nauruans reside. With the exception of a small fringe around an inland lagoon, the plateau which contains the phosphate deposits possesses few food plants and is uninhabited, but portion of the area has been planted with fruit trees. The system of land tenure is governed by an old custom, and, with the exception of small allotments held by the Government, the British Phosphate Commissioners, and the Missions, the whole of the island is owned by individual natives. The temperature range is from 76° F. at night to 94° F. during the day and the average humidity about 80 per cent. Normally the rainfall is comparatively low for islands of the Pacific, the annual average for twenty years from 1920 to 1940 being 80.5 inches. However, falls as high as 181.76 inches during 1940 and as low as 12.29 inches during 1950 have been recorded.

2. **History.**—The island, discovered by Captain Fearn in 1798, was annexed by Germany in 1888, and prior to 1914 was part of the protectorate of German New Guinea.

In November, 1914, Nauru was occupied by a detachment from the Australian Naval and Military Expedition at Rabaul, and it was included in the cession of colonies made by Germany in 1919 to the Allied and Associated Powers, whose representatives agreed that a mandate for its administration should be conferred upon His Britannic Majesty. The mandate was confirmed by the Council of the League of Nations on 17th December, 1920. On 2nd July, 1919, the British, Australian and New Zealand Governments agreed that the administration (which, since 1915, had been in charge of an official appointed by the British Colonial Office) should be vested in an Administrator, who took up duty in June, 1921. The agreement between the three Governments was approved by the Commonwealth Parliament in the Nauru Island Agreement Act 1919, and is shown in the Schedule to that Act. A supplementary agreement concerning Nauru was drafted in May, 1923, and ratified by the Commonwealth Parliament by the Nauru Island Agreement Act 1932.

On 25th August, 1942, nine months after the outbreak of the war in the Pacific, the island was occupied by Japanese forces and communications with Nauru ceased. It was re-occupied by a joint Australian Naval and Military Force on 14th September, 1945, and civil administration was re-established on 1st November, 1945.

3. **Trusteeship Agreement.**—On 1st November, 1947, the General Assembly of the United Nations approved a Trusteeship Agreement for the Territory of Nauru submitted by the Governments of Australia, New Zealand, and the United Kingdom in substitution for the terms of the mandate under which the Territory had been administered. This Agreement designates the Governments of Australia, New Zealand, and the United Kingdom as the Joint Administering Authority, with the Government of Australia continuing, on behalf of the Administering Authority, to exercise full powers of legislation, administration and jurisdiction in and over the Territory. The terms of the Agreement were given in Official Year Book No. 39, pages 370-1.

4. **Administration.**—The administration of the island is vested in an Administrator, who is obliged to conform to instructions issued by the Government which appointed him. Until the Government of Australia ceases to exercise full powers of legislation, administration, and jurisdiction in and over the Territory on behalf of the Administering Authority in pursuance of Article 4 of the Trusteeship Agreement, all ordinances made by the Administrator are subject to confirmation or disallowance by the Governor-General

of Australia acting on the advice of the Federal Executive Council. All administration expenses are met from local revenue and phosphate royalties. Native industries such as canoe-building, fishing, mat-making, etc., are encouraged by the provision of prizes at annual competitions. An agency of the Commonwealth Savings Bank has been established. There is a co-operative store managed to a large extent by Nauruans. The store books, however, are audited by Government officers. Natives are not allowed to carry or be in possession of firearms, and the use by them of intoxicating liquors and deleterious drugs is prohibited.

5. **Population.**—The Nauruan component of the population numbered about 1,100 in 1921, but had grown to more than 1,800 before the Japanese invasion in August, 1942. In 1946, it numbered less than 1,400 but by 30th June, 1957, had risen to 2,093. Chinese have, for many years, formed a considerable part of the population of Nauru; their numbers increased, with some reversals of trend, from about 600 in 1921 to more than 1,500 before the 1939–45 War. After the war, they increased from about 800 in 1946 to 1,491 in 1950, but at 30th June, 1957, numbered only 732. The number of other Pacific islanders in the early 1920's was almost 300 but they subsequently declined to less than 40. In recent years, the numbers have increased, and at 30th June, 1957, there were 1,105. The European population after 1921 fluctuated, but with a generally upward trend, between one and two hundred, and in 1940 numbered 192. In 1948, it numbered 247 and in 1957 it was 373. The total non-indigenous population of Nauru at 30th June, 1958, was 2,150, while the total population was 4,308.

6. **Health.**—Cases of the usual diseases known in the Pacific occur. Venereal disease is rare, but elephantiasis is occasionally met with. An area has been set apart for the segregation of sufferers from Hansen's disease, and the latest methods of treatment are applied. The total number of persons receiving treatment at 30th June, 1958, was 48, of whom, however, only nine were in segregation at the Hansenide colony. Three hospitals are maintained on the island, one by the Administration for Nauruans, and one by the British Phosphate Commissioners for European and one for non-European employees. A regular anti-mosquito campaign is conducted. Steps have been taken by the authorities to improve the water supply and to provide efficient sanitation generally. Every Nauruan is required to undergo medical examination at intervals of three months. Baby clinics have been established to give help and advice to Nauruan mothers in respect of infant nurture.

7. **Education.**—The Administration assumed full responsibility for education on 1st October, 1923. Prior to that date, the education of native children was undertaken by the Missions, which were subsidized by the Administration. There are three primary schools, one each for European, Nauruan and Gilbertese students, one Nauruan secondary school and one mission school providing primary and secondary classes. Primary education only is provided for European children, allowances being provided to those who proceed to secondary schools in Australia. At 30th June, 1958, 547 Nauruans, 94 other Pacific Islanders, 23 Chinese and 46 Europeans were enrolled in the primary schools, and 64 at the two secondary schools.

The curriculum is based generally on that used in Australian schools, and the teaching is generally in English. Education is compulsory for Nauruan children from six to sixteen years of age. At 30th June, 1958, 34 Nauruans were attending secondary schools in Australia or undertaking post-secondary training, 22 as scholarship holders and the balance sponsored by their families. In addition to these, there were three students at the Central Medical School, Suva, and one private student in New Zealand.

8. **Judiciary.**—The District Court is a court of record and consists of such magistrates as the Administrator appoints. Additionally, there is the Central Court which, as a superior court of record, consists of such judges or magistrates as are appointed and which, *inter alia*, may hear and determine appeals from judgments of the District Court. A Court of Appeal comprising a judge appointed by the Administrator has also been constituted with jurisdiction to hear and determine appeals from judgments of the Central Court.

9. **Religion.**—The London Missionary Society (Protestant) and the Sacred Heart of Jesus Mission (Roman Catholic) operate in Nauru.

10. **Phosphate Deposits.**—(i) *General.* From 1906 to 1919, the deposits were worked by the Pacific Phosphate Company, which also worked the deposits on Ocean Island (about 165 miles east of Nauru and part of the Gilbert and Ellice Islands Colony administered by the Colonial Office). The quantity remaining on Nauru has been estimated at about 70 million tons, and the exports average 85 per cent. to 88 per cent. of tricalcium phosphate.

The interests of the Pacific Phosphate Company in the two islands (though not in other islands in the Pacific in which it had workings) were bought by the British, Australian and New Zealand Governments on 25th June, 1920, for £3,500,000, the purchase money being contributed in the proportions of 42, 42 and 16 per cent. respectively. The Agreement of 2nd July, 1919, provides for the working of the deposits by three British Phosphate Commissioners, one appointed by each Government, and the three countries are entitled to receive the output in the same proportions of 42, 42 and 16 per cent.

(ii) *Royalty on Phosphate.* Under an agreement between the British Phosphate Commissioners and the Nauruan landowners, royalty of 1s. 6d. for each ton of phosphate exported has been payable since 1st July, 1953. As from 1st July, 1957, however, this rate has been increased to 2s. 7d. a ton as follows:—

- (a) 7d. to the Nauru Royalty Trust Fund to be used for the benefit of Nauruans;
- (b) 1s. to the landowner, being an immediate payment of 9d. a ton, and 3d. a ton to be invested on his account;

(c) 1s. to the Nauruan Community Long Term Investment Fund.

From 1st July, 1957, the lump sums payable to landowners from whom phosphate-bearing lands are leased were also increased to £60 an acre.

(iii) *Nauru and Ocean Island Phosphate Industry.* Exports of phosphate from Nauru and Ocean Island in 1939–40 amounted to 1,243,428 tons, of which Australia received 54 per cent. and New Zealand 32 per cent. Following the interruption to production by the war in the Pacific, this figure was not exceeded until 1949–50 when 1,285,998 tons were exported (76 per cent. to Australia, 24 per cent. to New Zealand). Figures for 1957–58 were:—1,456,760 tons exported (including Ocean Island 289,580 tons), 60 per cent. to Australia, 32 per cent. to New Zealand and eight per cent. to the United Kingdom.

Receipts from the sale of phosphate in 1939–40 amounted to £1,041,418, and the f.o.b. cost, including interest on capital, sinking fund, etc., amounted to £1,037,208. In 1946–47, sales and costs each amounted to about £500,000, but they have since increased to more than £3,000,000. In 1957–58, receipts from sales, etc., amounted to £3,363,556, and costs, etc., to £3,358,894.

During the period of the Japanese occupation from August, 1942, to September, 1945, while waiting to resume activities at Nauru and Ocean Island, the Commissioners were engaged in meeting the phosphate requirements of Australia and New Zealand from other available sources. A programme of improvements and additions to equipment has been commenced.

The amount due by the British Phosphate Commissioners to the partner Governments for purchase-money and other capital sums was £3,666,457 on 30th June, 1921, and at 30th June, 1942, this had been reduced to £3,024,373. The partner Governments agreed to a suspension of interest and sinking fund payments from 1st January, 1942, while operations at Nauru and Ocean Island were curtailed. Modified payments were resumed in 1946–47, pending a review of the position.

The review was carried out in 1950, and as a result the revised capital indebtedness of the Commissioners to the partner Governments at 30th June, 1950, was determined at £3,881,711. Interest and sinking fund payments were resumed with effect from 1st July, 1950, on the basis of repayment of the revised capital indebtedness in 35 years. At 30th June, 1958, this indebtedness had been reduced to £3,396,091.

(iv) *Employees.* Apart from a limited number of Europeans, the employees are Chinese and Pacific Islanders engaged under a one year contract. Increasing numbers of Nauruans are being employed, mainly in trade capacities.

(v) *Christmas Island Phosphates.* The Australian Government is also interested in phosphate deposits on Christmas Island (*see* p. 148).

11. *Transport.*—There is no regular air service to Nauru, but when the need arises charter flights are made to the island.

There is relatively frequent sea communication with the island. During 1957–58, 145 vessels called there. Most of the vessels are run or chartered by the British Phosphate Commissioners for the carriage of phosphate. Many of them also provide for the carriage of passengers and other cargo as required.

12. *Trade.*—The Customs Tariff of Nauru provides for the free admission of all goods other than cigars, cigarettes, tobacco, spirits, wines, beer, cider and perry. Articles imported by the Administration for its own use and spirits for scientific purposes are exempt. The tariff rates apply to all countries alike. In 1957–58, imports were valued at £971,029 and exports, 1,167,180 tons of phosphate, at £2,421,898. Of the total imports in 1957–58, Australia supplied 70 per cent. valued at £684,668; the balance came mainly from the United Kingdom, New Zealand, Hong Kong and the United States in that order.

In 1957–58, 755,002 tons of phosphate were exported to Australia, 306,478 tons to New Zealand and 105,700 tons to the United Kingdom.

13. Revenue and Expenditure.—The revenue of the Administration has risen from £33,084 in 1939 to £352,656 in 1957–58, and expenditure from £29,391 to £357,396.

Of the revenue for the year ended 30th June, 1958, payments by the British Phosphate Commissioners amounted to £328,988, post office and radio receipts, £9,340, and customs duties, £3,462. Mains items of expenditure were salaries £121,145, miscellaneous services (health, education, etc.), £154,612 and capital works and services, £54,345.

TERRITORY OF HEARD ISLAND AND McDONALD ISLANDS.

These islands, about 2,500 miles south-west of Fremantle, were transferred from the United Kingdom to Australia as from 26th December, 1947. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard Island and McDonald Islands by the Heard and McDonald Islands Act 1953.

In December, 1947, an Australian scientific station was established on Heard Island and meteorological investigations were conducted until the station was closed in March, 1955, following the establishment of Mawson station on the Antarctic mainland. Heard Island is about 27 miles long and 13 miles wide. The McDonald Islands are 26 miles to the west of Heard Island. They are small, rocky and precipitous.

AUSTRALIAN ANTARCTIC TERRITORY.

An Imperial Order in Council of 7th February, 1933, placed under Australian authority all the islands and territories other than Adelie Land which are situated south of 60° S. lat. and lying between 160° E. long. and 45° E. long. The Order came into force with a Proclamation issued by the Governor-General on 24th August, 1936, after the passage of the Australian Antarctic Territory Acceptance Act 1933. The boundaries of Adelie Land were definitively fixed by a French Decree of 1st April, 1938, as the islands and territories south of 60° S. lat. lying between 136° E. long. and 142° E. long. The Australian Antarctic Territory Act 1954 declared that the laws in force in the Australian Capital Territory are, so far as they are applicable, and are not inconsistent with any ordinance made under the Act, in force in the Australian Antarctic Territory.

On 13th February, 1954, the Australian National Antarctic Research Expedition (A.N.A.R.E.) established a base on MacRobertson Land at latitude 67° 36' S. and longitude 62° 53' E. The base was named Mawson in honour of the late Sir Douglas Mawson and was the first permanent Australian station to be set up on the Antarctic continent. Meteorological and other scientific research is conducted at Mawson, which is the centre for coastal and inland survey expeditions.

A second Australian scientific research station was established on the coast of Princess Elizabeth Land on 13th January, 1957, at latitude 68° 34' 36" S. and longitude 77° 58' 36" E. The station was named Davis in honour of Captain John King Davis of Melbourne, who commanded a number of famous Antarctic ships. In February, 1959, the Australian Government accepted from the United States Government custody of Wilkes Station, which was established by the United States on Vincennes Bay, at latitude 66° 15' S. and longitude 110° 33' E., on 16th January, 1957. The station was named in honour of Lieut. Charles Wilkes, who commanded the 1838–40 United States expedition to the area. Scientists from both countries participate in the programme of research at Wilkes. A.N.A.R.E. has also operated a station since the 1947–48 Antarctic season at Macquarie Island, approximately 850 miles south-east of Hobart. Macquarie Island is a dependency of the State of Tasmania.

TERRITORY OF COCOS (KEELING) ISLANDS.

1. General.—The Cocos (Keeling) Islands, two separate atolls comprising some 27 small coral islands with a total area of about five square miles, are situated in the Indian Ocean in latitude 12° 5' S. and longitude 96° 53' E. They lie some 1,720 miles north-west of Perth and 2,290 miles almost due west of Darwin, while Johannesburg is some 3,800 miles further distant to the south-west, and Colombo is 1,400 miles to the north-west of the group.

The main islands of the Territory are West Island, the largest, about 6 miles from north to south, on which is the aerodrome and most of the European community; Home Island, the head-quarters of the Clunies-Ross Estate; Direction Island, on which is situated the Cable and Wireless Station and the Department of Civil Aviation's Marine Base; and Horsburgh Island. North Keeling Island, which forms part of the Territory, lies about 15 miles to the north of the group and has no inhabitants.

Main settlements are on West Island, Home Island and Direction Island. The group of atolls is low-lying, flat and thickly covered by coconut palms, and surrounds a lagoon which has a harbour in the northern part but which is extremely difficult for navigation.

The climate is equable and pleasant, usually being under the influence of the south-east trade winds for about three-quarters of the year. However, the winds vary at times and meteorological reports from the Territory are particularly valuable to those engaged in forecasting for the eastern Indian Ocean. The temperature varies between 70° and 89° F., and its average rainfall is 80 inches. There are occasional violent storms. The worst cyclone in their recorded history struck the islands in 1909, when about 400,000 coconut palms were uprooted or decapitated and the accompanying tidal wave left only five buildings standing.

2. History.—The islands were discovered in 1609 by Captain William Keeling of the East India Company. They were uninhabited and remained so until 1826 when the first settlement was established on the main atoll by an Englishman, Alexander Hare, who quitted the islands in about 1831. In the meantime, a second settlement was formed on the main atoll by John Clunies-Ross, a Scottish seaman and adventurer, who landed with several boat-loads of Malay seamen. In 1857, the islands were annexed to the Crown and formally declared part of the British Dominions, and in 1878 responsibility for their supervision was transferred from the Colonial Office to the Government of Ceylon, and subsequently, in 1882, to the Government of the Straits Settlements. By indenture in 1886, Queen Victoria granted the land comprised in the islands to John Clunies-Ross in perpetuity, and until 1946, the patriarchal rule of the head of the Clunies-Ross family was recognized. The head of the family had semi-official status as resident magistrate and representative of the Government. However, in 1946, when the islands became a dependency of the Colony of Singapore, a Resident Administrator, responsible to the Governor of Singapore, was appointed.

Other items of significance in the islands' history are:—1901—a small cable relay station was established at Direction Island; 1903—the islands were incorporated in the Settlement of Singapore; 1914—the German cruiser *Emden* raided Direction Island but was destroyed by H.M.A.S. *Sydney*; 1944—the Islands were under military administration with allied troops stationed there (a military Administrator was appointed during the minority of the Clunies-Ross heir who came of age in 1949); 1945—a R.A.F. air-strip was constructed on West Island; 1946—civil administration was re-established.

3. Transfer to the Commonwealth of Australia.—On 23rd November, 1955, the Cocos Islands ceased to form part of the Colony of Singapore and were placed under the authority of the Commonwealth of Australia. The transfer was effected by an Order in Council made by Her Majesty Queen Elizabeth the Second under the Imperial Act entitled the Cocos Islands Act 1955 and by the Cocos (Keeling) Islands Act 1955 of the Commonwealth whereby the islands were declared to be accepted by the Commonwealth as a Territory under the authority of the Commonwealth to be known as the Territory of Cocos (Keeling) Islands.

4. Administration.—Responsibility for the administration of the Territory rests with the Minister for Territories. The first Official Representative was appointed on 23rd November, 1955, to take charge of the local administration of the Territory. Under the Official Representation Ordinance 1955 of the Territory, the Official Representative is given such powers and functions in relation to the Territory as are delegated to him by the Minister under the Cocos (Keeling) Islands Act 1955–1958 or are otherwise conferred on him under that Act or by or under any other law of the Territory. The laws of the Colony of Singapore which were in force in the islands immediately before the date of the transfer were, with certain exceptions, continued in force by the Cocos (Keeling) Islands Act 1955–1958. They may be amended or repealed by Ordinances made under the provisions of that Act which empower the Governor-General to make Ordinances for the peace, order and good government of the Territory.

5. Population.—The population of the Territory in June, 1958, was estimated to be 610, comprising 123 Europeans, 450 Cocos Islanders and 37 Asian indentured workers. The Cocos Islanders reside on Home Island.

6. Transport.—There is an International airport at West Island under the control of the Department of Civil Aviation. This is a re-fuelling point for aircraft on the fortnightly air-services between Australia–South Africa and Australia–United Kingdom operated by South African Airways and Qantas Empire Airways Ltd., respectively. Although there is no regular shipping service, vessels from Australia and Singapore call at intervals.

TERRITORY OF CHRISTMAS ISLAND.

1. General.—Christmas Island is an isolated bank, situated in the Indian Ocean in latitude 10° 25' 19" S., longitude 105° 42' 57" E. It is approximately 220 miles south from Java Head, at the south entrance to Sunda Straits, 810 miles from Singapore and 1,625 miles from Fremantle. Christmas Island covers an area of about 55 square miles. It

consists of a central plateau at about 600 to 800 feet, with several prominent rises up to 1,170 feet. The plateau descends to the sea in a series of steep slopes alternating with terraces, the last dropping in a cliff of 200 to 300 feet to a shore terrace, terminating in a sea cliff of 10 to 150 feet, which is continuous round the Island except in a few places, the chief of which is Flying Fish Cove where the shore is formed of coral shingles.

The principal settlement is at Flying Fish Cove which is also the only known anchorage. Vessels are moored close inshore opposite two piers with extension conveyors and direct loading to ships is carried out by these means. The main installations of the phosphate industry are located here together with the European married quarters and the Chinese and Malay settlements. There is a secondary settlement with maintenance shops, etc., at South Point, and several other small settlements or camps across the central plateau and at the small pumping plants at springs and wells.

The climate is healthy and pleasant, the prevailing winds being from the south-east to east-south-east from May to December but from then to April (the wet season) they occasionally shift round from north to north-east. The average yearly rainfall is about 80 inches with a marked summer incidence. The porous nature of the ground prevents the formation of pools of water but there are several good springs, which maintain an adequate supply of fresh water for the small population and the installations. The mean average temperature is about 80° and does not vary greatly throughout the year.

2. History and Administration.—The first mention of Christmas Island appears in a map published in Holland in 1666, in which it is called *Moni Island*, although it is believed that Captain William Mynors of the East India Company had sighted the island on Christmas Day in 1643 and had named it accordingly.

In June 1888, it was annexed by Captain H. W. May of H.M.S. *Imperieuse* as part of the British Dominions and placed under the supervision of the Straits Settlements Government for administrative purposes. Following upon this, a small settlement was established at Flying Fish Cove by Mr. G. Clunies-Ross of Cocos (Keeling) Islands. In February, 1891, Sir John Murray and Mr. Clunies-Ross were granted a 99 year lease of the Island. This lease was transferred to the Christmas Island Phosphate Co. Ltd. in 1897, following the discovery of large deposits of phosphate of lime on the Island. In 1900, Christmas Island was incorporated for administrative purposes with the Settlement of Singapore and the laws of Singapore were generally applied to the Island.

The Straits Settlements (Repeal) Act 1946, passed by the United Kingdom, repealed the Act establishing the whole of the Straits Settlements as a single colony. Subsequently the Singapore Colony Order in Council, in 1946, decreed that the Island of Singapore and its dependencies, the Cocos or Keeling Islands and Christmas Island should be governed and administered as a separate Colony and called the Colony of Singapore. From 1st January, 1958, pending transfer to Australia, Christmas Island was administered by the United Kingdom as a separate Crown Colony. The Island was transferred to the Commonwealth of Australia on 1st October, 1958, by the Christmas Island Act 1958 and is now administered as a Territory under the authority of the Commonwealth. Responsibility for the administration and government of the Territory rests with the Minister for Territories and day to day affairs on the Island are administered by an Official Representative under delegation from the Minister. The laws which were in force in the Island at the 30th September, 1958, were continued as the laws of the Territory after its transfer to Australia on the 1st October.

3. Industry and Commerce. The only commercial activity carried out is the mining of phosphate. The British Phosphate Commissioners act as managing agents for the Christmas Island Phosphate Commission.

There are three principal phosphate deposits on the Island, the largest being that now being worked at South Point. This field is situated on the 600' to 800' level and is approximately 11 miles from the drying and shipping plant at Flying Fish Cove. The present output is about 400,000 tons annually. In addition, about 30,000 tons of phosphate dust is supplied annually to Malaya.

There is little prospect of any economic developments outside the phosphate industry.

4. Population.—The population of Christmas Island at 30th June, 1959, was approximately 2,908, consisting of 161 Europeans, 2,033 Chinese, 700 Malays and 14 Indians.

5. Communications.—Transport connection with the island is maintained by ships operated by the Phosphate Commission or ships under charter by the Commission. The "Islander", a ship of 1,600 tons, makes regular trips between Christmas Island and Singapore at intervals of about three weeks. Chartered vessels ply between Christmas Island and Fremantle and other Australian ports. Trips average about four vessels per month.

CHAPTER VI.

MANUFACTURING INDUSTRY.

§ 1. General.

1. Introduction.—A complete statistical account of the growth of the manufacturing industry in Australia cannot be given, as the necessary statistics were not collected by the several States on a definite and uniform basis prior to 1906. A standard classification of manufacturing industries was formulated at a conference of Australian statisticians in 1902 and adopted by all States in 1906 and figures on this basis were prepared for 1907 and subsequent years.

Prior to the federation of the Australian States in 1901, the manufacturing industry in Australia was engaged primarily in the production of goods for local use, mainly food commodities, furniture, bricks, clothing made from imported materials, printing, the repair rather than the manufacture of machinery, and the preliminary treatment of primary products, such as wool-scouring and sawmilling.

After federation, steady expansion of the manufacturing industry resulted from the removal of interstate trade barriers and the operation of a uniform protective tariff. This expansion was quickened as a result of the demands created by the 1914–18 War, the curtailment of imports, and the rapid growth of spending power within the community. New and more advanced development took place, iron and steel works and many related and subsidiary industries were established, extensive manufacture of machinery was begun, and a wide range of high-grade products—textiles, metal manufactures, electrical goods, etc.—was added to the list of commodities made in Australia.

This expansion was checked by the world-wide economic depression of 1929–33, but in 1933 returning general prosperity and the opportunities opened to local manufacturers by import restrictions, together with depreciation of Australian currency, gave renewed stimulus to manufacturing enterprise. As economic conditions improved, the tariff, revenue duties, and primage were reduced, but without materially prejudicing the progress of local manufactures.

When war broke out in September, 1939, Australia became a major source of supply for British countries east of Suez and in meeting their demands, as well as those arising locally because of interruption of oversea imports, existing manufacturing industries expanded, and new enterprises were developed rapidly for the production of all classes of munitions, aircraft, ships, many new kinds of machinery and metal manufactures, scientific equipment, textiles, chemicals, etc. The outbreak of war with Japan, the basing of Allied armed forces in Australia, and Australian responsibilities for supplies in the South-west Pacific Area, gave added impetus to these developments, and manufacturing in Australia outstripped all previous levels.

The cessation of war production and the transition of industry to a peace-time basis temporarily retarded progress, but from 1945–46 onward there was renewed expansion of the manufacturing industries to which an inflow of capital from overseas contributed.

2. Decentralization of Manufacturing Industries.—Following upon a report by the Secondary Industries Commission, the Commonwealth Government called a conference of Commonwealth and State Ministers in August, 1945, to formulate a national policy for the decentralization of secondary industries. It was agreed that the State Governments should seek to promote decentralization along the lines appropriate to each, providing necessary services, assistance and concessions to the full extent of State resources. The Commonwealth undertook to collaborate in all matters of Commonwealth industrial policy

affecting the development and location of industry, to investigate, in association with the States, the prospects of developing secondary industries in selected areas, to advise the States of developments desirable for defence purposes, and to provide financial assistance for projects of national importance where the cost would be great relative to the State's resources.

The Commonwealth has assisted decentralization by allocating to private industry munitions and other defence buildings in decentralized areas and accommodating migrants in provincial centres with prospects of development. Oversea firms contemplating establishment in Australia are encouraged to select locations in rural areas or the less industrialized States.

3. Commonwealth Division of Industrial Development.—The functions of the Division of Industrial Development include the encouragement of industrial development, the exercising of Commonwealth responsibilities for the decentralization of industry, the promotion of industrial efficiency (especially the study of technical, production and managerial problems and the dissemination and application of new knowledge and methods), the encouragement of the development of technological institutes and the publication of studies of the structure and operation of Australian manufacturing industries. The Division was attached to the Ministry of National Development when formed in March, 1950, to plan the development of national resources and to promote decentralization and regional development in conjunction with the States, but was transferred to the Department of Trade in January, 1956.

4. Customs and Excise Tariffs and Bounties on Manufactures.—Particulars of Australian customs and excise tariffs, and the constitution and functions of the Australian Tariff Board in relation to matters affecting the industrial development of Australia, are given in Chapter XIII.—Trade.

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards.

5. Scientific Research and Standardization.—(i) *The Commonwealth Scientific and Industrial Research Organization.* The function of this Organization, reference to which also appears in Chapter XXX., is to initiate and conduct research in connexion with industries in Australia, to train research workers, to establish industrial research student-ships and fellowships, to make grants in aid of pure scientific research, to establish industrial research associations in various industries, to provide for testing and standardization of scientific equipment, to conduct an information service relating to scientific and industrial matters, and to act for Australia in liaison with other countries in matters of scientific research.

(ii) *The Standards Association of Australia.* This Association, which is referred to also in Chapter XXX., acts as the national standardizing organization of Australia and issues standard specifications for materials and codes of practice. Specifications and codes are prepared and revised periodically in accordance with the needs of industry, and standards are evolved and accepted by general consent.

(iii) *The National Association of Testing Authorities.* The National Association of Testing Authorities organizes national testing facilities throughout Australia to serve private and governmental needs. Laboratories may register voluntarily in respect of tests within their competence and the Association ensures the maintenance of their standards of testing. It is expected that there will be general acceptance of certificates of tests issued in the name of the Association by the registered laboratories.

6. Definitions in Factory Statistics.—The statistics relating to factories have been compiled from tabulations made by the Deputy Commonwealth Statisticians in the several States from returns supplied to them annually by manufacturers in accordance with the Statistical Acts of the States and the Commonwealth. A return must be supplied in respect

of every factory, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries) but does not cover smallgoods makers, laundries, farriers, photography studios, florists and seedsmen, or most abattoirs. It should be noted that details relating to small establishments not classified for statistical purposes as factories are not included in the figures contained in this chapter.

If a manufacturing business is conducted in conjunction with any other activity, particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained for each industry if practicable.

Manufacturers are requested to state in their returns particulars as to the number, age, wages, etc., of their employees, the value of premises and equipment, the horse-power of machinery, the value, and in most cases the quantities, of raw materials and fuel used, and quantities and values of principal materials and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income and expenditure of factories nor to show the profits or losses of factories collectively or individually.

The *average number of persons* employed is quoted on two different bases, the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to the number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

Working proprietors are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

The *value of factory output* is the value of the goods manufactured or their value after passing through the particular process of manufacture and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

The *value of production* is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw materials of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, and timber from the sawmills used in furniture factories and in joinery. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason, the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

In the special case of Government factories and workshops, the value of output is, in most cases, estimated by adding 10 per cent. to the value of materials and fuel used and other factory costs, including salaries and wages paid.

7. Classification of Factories.—In the compilation of statistical data relating to factories in Australia, a standard classification of manufacturing industries, formulated at a conference of Australian statisticians in 1902 and revised from time to time, was used until the year 1929–30. A new classification was introduced in 1930–31, and this in turn was revised and extended (principally in respect of the placement and composition of sub-classes) in accordance with decisions of the Statisticians' Conference, 1945.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or to total factory activity. Particulars of certain of the sub-classes shown below are published in the latter portion of this chapter and full details for all sub-classes may be found in the Bulletin *Secondary Industries*, published annually.

The classes and sub-classes in the current classification of factories are as follows:—

CLASSIFICATION OF FACTORIES.

CLASS I.—TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS.

Coke Works.
Briquetting and Pulverized Coal.
Carbide.
Lime, Plaster of Paris, Asphalt.
Fibrous Plaster and Products.
Marble, Slate, etc.
Cement, Portland.
Asbestos Cement Sheets and Mouldings.
Other Cement Goods.
Other.

CLASS II.—BRICKS, POTTERY, GLASS, ETC.

Bricks and Tiles.
Earthenware, China, Porcelain and Terracotta.
Glass (*other than Bottles*).
Glass Bottles.
Other.

CLASS III.—CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE.

Industrial and Heavy Chemicals and Acids.
Pharmaceutical and Toilet Preparations.
Explosives (including Fireworks).
White Lead, Paints and Varnish.
Oils, Vegetable.
Oils, Mineral.
Oils, Animal.
Boiling-down, Tallow-refining.
Soap and Candles.
Chemical Fertilizers.
Inks, Polishes, etc.
Matches.
Other.

CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES.

Smelting, Converting, Refining, Rolling of
Iron and Steel.
Foundries (Ferrous).
Plant, Equipment and Machinery, etc.
Other Engineering.
Extracting and Refining of other Metals; Alloys.
Electrical Machinery, Cables and Apparatus.
Construction and Repair of Vehicles (10 groups).
Ship and Boat Building and Repairing, Marine
Engineering (Government and Other).
Cutlery and Small Hand Tools.
Agricultural Machines and Implements.
Non-Ferrous Metals—
Rolling and Extrusion.
Founding, Casting, etc.
Iron and Steel Sheets.
Sheet Metal Working, Pressing, and Stamping.
Pipes, Tubes and Fittings—Ferrous.
Wire and Wire Netting (including Nails).
Stoves, Ovens and Ranges.
Gas Fittings and Meters.
Lead Mills.
Sewing Machines.

CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES—*continued.*

Arms, Ammunition (excluding Explosives).
Wireless and Amplifying Apparatus.
Other Metal Works.

CLASS V.—PRECIOUS METALS, JEWELLERY, PLATE.

Jewellery.
Watches and Clocks (including Repairs).
Electroplating (Gold, Silver, Chromium, etc.).

CLASS VI.—TEXTILES AND TEXTILE GOODS (NOT DRESS).

Cotton Ginning.
Cotton Spinning and Weaving.
Wool—Carding, Spinning, Weaving.
Hosiery and Other Knitted Goods.
Silk, Natural.
Rayon, Nylon and Other Synthetic Fibres.
Flax Mills.
Rope and Cordage.
Canvas Goods, Tents, Tarpaulins, etc.
Bags and Sacks.
Textile Dyeing, Printing and Finishing
Other.

CLASS VII.—SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR).

Furriers and Fur-dressing.
Woolscouring and Fellmongery.
Tanning, Currying and Leather-dressing.
Saddlery, Harness and Whips.
Machine Belting (Leather or other).
Bags, Trunks, etc.

CLASS VIII.—CLOTHING (EXCEPT KNITTED).

Tailoring and Ready-made Clothing.
Waterproof and Oilskin Clothing.
Dressmaking, Hemstitching.
Millinery.
Shirts, Collars, Underclothing.
Foundation Garments.
Handkerchiefs, Ties and Scarves.
Hats and Caps.
Gloves.
Boots and Shoes (not Rubber).
Boot and Shoe Repairing.
Boot and Shoe Accessories.
Umbrellas and Walking Sticks.
Dyeworks and Cleaning, etc.
Other.

CLASS IX.—FOOD, DRINK AND TOBACCO.

Flour-milling.
Cereal Foods and Starch.
Animal and Bird Foods.
Chaffcutting and Corncrushing.
Bakeries (including Cakes and Pastry).
Biscuits.
Sugar-mills.
Sugar-refining.

CLASS IX.—FOOD, DRINK AND TOBACCO—
continued.

Confectionery (including Chocolate and Icing Sugar).
Jam, Fruit and Vegetable Canning.
Pickles, Sauces, Vinegar.
Bacon Curing.
Butter Factories.
Cheese Factories.
Condensed and Dried Milk Factories.
Margarine.
Meat and Fish Preserving.
Condiments, Coffee, Spices.
Ice and Refrigerating.
Salt.
Aerated Waters, Cordials, etc.
Breweries.
Distilleries.
Wine-making.
Cider and Perry.
Malting.
Bottling.
Tobacco, Cigars, Cigarettes, Snuff.
Dehydrated Fruit and Vegetables.
Ice Cream.
Sausage Casings.
Arrowroot.
Other.

CLASS X.—SAWMILLS, JOINERY, BOXES, ETC.,
WOOD TURNING AND CARVING.

Sawmills.
Plywood Mills (including Veneers).
Bark Mills.
Joinery.
Cooperage.
Boxes and Cases.
Woodturning, Woodcarving, etc.
Basketware and Wickerware (including Sea-grass and Bamboo Furniture).
Perambulators (including Pushers and Strollers).
Wall and Ceiling Boards (not Plaster or Cement).
Other.

CLASS XI.—FURNITURE OF WOOD, BEDDING, ETC.
Cabinet and Furniture Making (including Billiard Tables and Upholstery).
Bedding and Mattresses (not Wire).
Furnishing Drapery.

CLASS XII.—FURNITURE OF WOOD, BEDDING, ETC.—
continued.

Picture Frames.
Blinds.

CLASS XII.—PAPER, STATIONERY, PRINTING,
BOOKBINDING, ETC.

Newspapers and Periodicals.
Printing—
General, including Bookbinding.
Manufactured Stationery.
Stereotyping, Electrotyping.
Process and Photo Engraving.
Cardboard Boxes, Cartons and Containers.
Paper Bags.
Paper-making.
Pencils, Penholders, Chalks, Crayons.
Other.

CLASS XIII.—RUBBER.

Rubber Goods (including Tyres Made).
Tyre Retreading and Repairing.

CLASS XIV.—MUSICAL INSTRUMENTS.

Gramophones and Gramophone Records.
Pianos, Piano-Players, Organs.
Other.

CLASS XV.—MISCELLANEOUS PRODUCTS.

Linoleum, Leather-cloth, Oil-cloth, etc.
Bone, Horn, Ivory and Shell.
Plastic Moulding and Products.
Brooms and Brushes.
Optical Instruments and Appliances.
Surgical and Other Scientific Instruments and Appliances.
Photographic Material, (including Developing and Printing).
Toys, Games and Sports Requisites.
Artificial Flowers.
Other.

CLASS XVI.—HEAT, LIGHT, AND POWER.

Electric Light and Power.
Gas Works.

8. Factory Development since 1901—Australia.—The development of the manufacturing industries in Australia at intervals since 1901 is summarized in the following table:—

FACTORIES: AUSTRALIA.

Year.	Fac-tories.	Employ-ment.(a)	Salaries and Wages Paid.(b)	Value of—				
				Materials and Fuel Used.	Output.	Pro-duction.(c)	Land and Build-ings.	Plant and Ma-chinery.
	No.	'000.	£'000.	£'000.	£'000.	£'000.	£'000.	£'000.
	(d)		(d)	(d)	(d)	(d)	(d)	(d)
1901 ..	11,143	198	27,528	81,763	133,022	51,259	32,701	31,516
1911 ..	14,455	312	27,528	213,559	323,993	110,434	60,831	68,655
1920-21 ..	17,113	367	62,932	172,489	290,799	118,310	112,211	124,498
1930-31 ..	21,751	339	62,455	386,881	644,795	257,914	144,094	161,356
1940-41 ..	27,300	650	137,919	1,306,963	2,150,835	843,872	302,785	336,615
1950-51 ..	43,147	969	491,718	1,868,431	3,095,476	1,227,045	483,431	580,715
1953-54 ..	49,576	990	705,137	2,069,080	3,434,589	1,365,509	555,996	698,292
1954-55 ..	51,056	1,031	781,640	2,263,346	3,764,060	1,500,714	655,582	803,540
1955-56 ..	52,406	1,060	853,469	2,400,293	4,022,413	1,622,120	761,995	923,954
1956-57 ..	53,200	1,063	891,090	2,545,159	4,273,882	1,728,723	851,686	1,021,351
1957-58 ..	53,988	1,074	929,290					

(a) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors are included in all years. (b) Excludes drawings by working proprietors. (c) Value of output less value of materials and fuel, etc., used. (d) Not available.

§ 2. Number of Factories.

1. Number of Factories in each State.—The following table shows the number of factories operating in each State in the years 1938-39 and 1953-54 to 1957-58:—

FACTORIES: NUMBER.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1938-39	9,464	9,250	3,087	2,067	2,129	944	26,941
1953-54	20,199	15,533	5,199	3,577	3,523	1,545	49,576
1954-55	20,837	15,861	5,284	3,750	3,727	1,597	51,056
1955-56	21,602	16,053	5,378	3,908	3,871	1,594	52,406
1956-57	21,838	16,232	5,537	4,063	3,935	1,595	53,200
1957-58	22,270	16,426	5,528	4,168	3,941	1,655	53,988

2. Number of Factories in Industrial Classes.—(i) *Australia.* The next table shows the number of factories in Australia during 1938-39 and 1953-54 to 1957-58 classified in the industrial classes agreed upon by the Conference of Statisticians in 1930. Details of some of the principal industries included in the table will be found in § 11, page 186.

FACTORIES: NUMBER IN INDUSTRIAL CLASSES: AUSTRALIA.

Class of Industry.	1938-39.	1953-54.	1954-55.	1955-56.	1956-57.	1957-58.
I. Treatment of Non-metalliferous Mine and Quarry Products	564	1,280	1,303	1,337	1,331	1,328
II. Bricks, Pottery, Glass, etc.	471	639	662	666	672	660
III. Chemicals, Dyes, Explosives, Paints, Oils, Grease	666	1,099	1,124	1,139	1,162	1,184
IV. Industrial Metals, Machines, Conveyances	7,255	16,868	17,842	18,860	19,766	20,518
V. Precious Metals, Jewellery, Plate	290	720	746	782	824	808
VI. Textiles and Textile Goods (not Dress)	611	1,336	1,356	1,362	1,364	1,364
VII. Skins and Leather (not Clothing or Footwear)	533	783	810	789	785	761
VIII. Clothing (except Knitted)	4,314	7,260	7,370	7,390	7,312	7,266
IX. Food, Drink and Tobacco	5,202	7,379	7,433	7,468	7,315	7,455
X. Sawmills, Joinery, Boxes, etc., Wood Turning and Carving	2,822	5,769	5,845	5,895	5,872	5,764
XI. Furniture of Wood, Bedding, etc.	1,149	2,180	2,200	2,203	2,199	2,200
XII. Paper, Stationery, Printing, Book-binding, etc.	1,816	2,179	2,224	2,303	2,367	2,413
XIII. Rubber	299	465	495	513	536	565
XIV. Musical Instruments	34	75	79	84	88	88
XV. Miscellaneous Products	413	1,095	1,119	1,188	1,185	1,207
<i>Total, Classes I. to XV. ..</i>	<i>26,439</i>	<i>49,127</i>	<i>50,608</i>	<i>51,979</i>	<i>52,778</i>	<i>53,581</i>
XVI. Heat, Light and Power	502	449	448	427	422	407
Grand Total	26,941	49,576	51,056	52,406	53,200	53,988

Although not the best index of manufacturing activity, the number of factories affords some indication of the development of secondary industries. Except for the two war years 1941-42 and 1942-43, when there were decreases, the number of factories increased each year from 1931-32 to 1957-58. In the latter year, the number of factories in Australia reached the record total of 53,988 or more than twice the number in 1938-39.

(ii) *States, 1957-58.* The following table shows the number of factories in each State classified according to the nature of the industry:—

FACTORIES: NUMBER IN INDUSTRIAL CLASSES, 1957-58.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
I. Treatment of Non-metalliferous Mine and Quarry Products	448	442	101	166	117	54	1,328

§ 3. Classification of Factories according to Number of Persons Employed.

1. *General.*—The size classification of factories is based on the average weekly number of persons employed during the period of operation (including working proprietors).

2. *States, 1957-58.*—The following table shows, for each State, the number of factories classified according to the average number of persons employed:—

FACTORIES: CLASSIFICATION ACCORDING TO SIZE OF FACTORY, 1957-58.

Size of Factory (Persons employed).	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
NUMBER OF FACTORIES.							
Under 4	8,987	6,077	1,869	1,460	1,980	739	21,112
4	1,903	1,254	546	383	152	160	4,398
5 to 10	5,331	3,862	1,564	1,077	924	385	13,143
11 to 20	2,759	2,268	693	597	429	170	6,916
21 to 50	1,946	1,721	515	370	291	124	4,967
51 to 100	690	621	159	151	97	45	1,763
101 to 200	353	345	92	71	43	14	918
201 to 300	100	114	55	24	17	4	314

§ 4. Power Equipment in Factories.

1. General.—Since 1936-37, statistics of power equipment in factories relate to the "rated horse-power" of engines ordinarily in use and engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of Central Electric Stations are collected in greater detail. To avoid duplication, it is essential that some distinction should be made between Central Electric Stations and other classes of industries. In the following tables, Central Electric Stations have been treated separately from other factories.

In 1957-58, 395 factories were recorded as using no power other than manual, the distribution of these factories among the various industries being as follows:—Fibrous Plaster and Products, 24; Galvanized Ironworking, Tinsmithing, 14; Tailoring and Ready-made Clothing, 93; Dressmaking, 10; Millinery, 4; Bakeries, 27; Cabinet and Furniture Making, 11; all other industries, 212.

2. Rated Horse-power of Engines in Factories other than Central Electric Stations.—The following table shows the number of factories and the total rated horse-power of engines and electric motors ordinarily in use and in reserve or idle during 1957-58:—

FACTORIES(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS, 1957-58.

State.	Factories.(a)	Rated Horse-power of Engines and Motors.	
		Ordinarily In Use.(b)	In Reserve or Idle (omitting obsolete).
New South Wales	22,198	2,024,244	373,706
Victoria	16,375	1,325,387	190,166
Queensland	5,468	514,891	76,026
South Australia	4,130	370,097	47,146
Western Australia	3,854	242,719	34,159
Tasmania	1,644	250,042	36,268
Australia	53,669	4,727,380	757,471

(a) Includes Gas Works but excludes Central Electric Stations. (b) Excludes motors driven by electricity generated in factories not classified as Central Electric Stations.

3. Rated Horse-power of Engines and Electric Motors Ordinarily in Use.—(i) *According to Type, States.* Particulars of the types and the total rated horse-power of engines, etc., ordinarily in use in each State are given below:—

FACTORIES(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS ORDINARILY IN USE, 1957-1958.

State.	Steam.		Internal Combustion.			Water.	Motors driven by Electricity.		Total. (b)

§ 5. Employment in Factories.

1. **Number Employed.**—(i) *General.* All persons employed in the manufacturing activities of a factory, including proprietors who work in their own business and “out-workers” (see para. 4 (ii), p. 163), are counted as factory employees, while those employed in selling and distributing, such as salesmen, travellers, collectors, carters employed solely on outward delivery of manufactured goods and retailing storemen, are excluded. Prior to 1945–46, the occupational grouping collected was (i) working proprietors; (ii) managers and overseers; (iii) accountants and clerks; (iv) enginedrivers and firemen; (v) workers in factory, skilled and unskilled; (vi) carters and messengers; and (vii) persons working regularly at home for the establishment. This grouping did not record separate details for technical staff (e.g., chemists, draftsmen, etc.) and supervisory staff and in 1945–46 the set-up on the collection form was amended to obtain the following groupings:—(i) Working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, draftsmen and other laboratory and research staff; (iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers and persons working regularly at home.

Prior to the year 1928–29, average employment in factories was computed by dividing the sum of the number employed each week by the number of weeks worked. The figures therefore represented the average number employed over the period worked, which, for many factories, was less than a full year. Commencing with the year 1928–29, the figures represent the equivalent average number employed over a full year of fifty-two weeks. The classification of factories according to the number of persons employed (*see* § 3, p. 155), however, is still based on the old method, but for all other purposes the average number engaged over the full year is used.

(ii) *Australia.* Particulars of the numbers employed, the increase in employment and the rate per cent. of such increase are given for the years 1938–39 and 1953–54 to 1957–58 in the following table:—

FACTORIES: EMPLOYMENT, AUSTRALIA.

Year.	Males.			Females.			Persons.		
	Number Em- ployed.	Increase on Preceding Year.		Number Em- ployed.	Increase on Preceding Year.		Number Em- ployed.	Increase on Preceding Year.

4. **Persons Employed According to Occupational Grouping.**—(i) *General.* In the following table, the average number of persons employed in each State during 1957-58 is classified according to occupational grouping. As mentioned previously, persons employed in factories are now classified on a basis different from that adopted prior to 1945-46. The nature of this change is indicated in para. 1 of this section (*see p. 159*).

FACTORIES: PERSONS EMPLOYED—OCCUPATIONAL GROUPING, 1957-58.

State.	Average Number of Persons Employed.						Total.
	Working Proprietors.	Managerial and Clerical Staff, etc.(a)	Chemists, Draftsmen, etc.	Foremen and Overseers.	Workers in Factory (Skilled and Unskilled).	Carters (excluding Delivery only) and Messengers, etc. (b)	
New South Wales ..	16,202	53,896	6,955	19,521	347,182	2,046	445,802
Victoria ..	13,934	40,951	5,751	16,262	278,110	2,135	357,143
Queensland ..	4,946	10,169	1,073	4,080	80,831	745	101,844
South Australia ..	2,941	11,028	1,672	4,446	72,037	348	92,472
Western Australia ..	2,714	4,220	473	2,121	38,835	99	48,462
Tasmania ..	1,052	2,895	584	1,334	22,102	117	28,084
<i>Total Males</i> ..	<i>36,373</i>	<i>75,871</i>	<i>15,036</i>	<i>44,252</i>	<i>646,256</i>	<i>4,727</i>	<i>822,515</i>
<i>Total Females</i> ..	<i>5,416</i>	<i>47,288</i>	<i>1,472</i>	<i>3,512</i>	<i>192,841</i>	<i>763</i>	<i>251,292</i>
Total Persons	41,789	123,159	16,508	47,764	839,097	5,490	1,073,807

(a) Includes salaried managers and working directors at home.

(b) Includes persons working regularly

(ii) *Outworkers.* The term "outworker" or "homeworker" has acquired a special meaning in connexion with manufacturing industries, and embraces only persons to whom work is given out by factories to be done at home. Owing to the amended employment groupings adopted in 1945-46, persons working regularly at home for factories are now included with carters, messengers and others and separate details are no longer available.

5. *Monthly Employment, 1938-39 and 1953-54 to 1957-58.*—(i) *Australia.* The following table shows the number of persons (excluding working proprietors) employed in factories on the pay-day nearest to the 15th of each month for the year 1938-39 and on the last pay-day of the month in the later years:—

FACTORIES: MONTHLY EMPLOYMENT, AUSTRALIA.

(EXCLUDING WORKING PROPRIETORS.)

6. Distribution of Employees According to Age.—The extension of statistics of employment in factories, decided upon at the Conference of Australian Statisticians held in 1945, permits of a distribution of employees (excluding working proprietors) into seven age-groups from 1945-46 onwards, instead of three as in previous years. The particulars are collected as at June. The number employed in each age-group on the last pay-day in June, 1957 and 1958, are given below:—

FACTORIES: DISTRIBUTION OF EMPLOYEES ACCORDING TO AGE, JUNE, 1957 AND 1958.

(EXCLUDING WORKING PROPRIETORS.)

Age Group.	June, 1957.			June, 1958.

Australia ..	1.30	10.09	4.92	2.58	0.50	0.58

NOTE.—Minus sign (—) indicates decrease.

3. **Masculinity of Persons Employed in Factories.**—The extent to which females are employed in the factories of Australia may perhaps be more clearly shown by the proportion of males to females employed in each State. The following table shows particulars for the years 1938–39 and 1953–54 to 1957–58:—

FACTORIES: MASCULINITY(a) OF PERSONS EMPLOYED.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1938–39	271	208	432	445	415	420	271
1953–54	313	266	488	476	576	467	328
1954–55	307	265	490	465	602	478	325
1955–56	309	265	491	463	640	448	327
1956–57	308	266	490	460	636	433	326
1957–58	311	265	500	458	655	461	327

(a) Number of males per 100 females.

For a number of years prior to 1926–27, there were on the average 300 males employed in factories for every 100 females, but by 1932–33, as a result of the particularly severe effect of the depression on the heavier industries where males predominate in number, there were only 239 males employed to every 100 females. With the subsequent recovery of employment in the heavier industries, the proportion of males per 100 females increased to 271 in 1937–38 and 1938–39. The enlistment of men in the armed services, the expansion of industry and the consequential absorption of women brought about by the 1939–45 War caused a decrease in masculinity from 1938–39 to 1943–44. However, following the cessation of hostilities in 1945 and the return of servicemen to civilian life, the number of females employed in factories declined and masculinity increased. In 1957–58, there were 327 males to every 100 females employed in factories.

4. **Employment of Females in Particular Industries.**—(i) *General.* The majority of females in manufacturing industries are employed in four classes, namely:—IV., Industrial Metals, Machines, etc.; VI., Textiles; VIII., Clothing; and IX., Food, Drink and Tobacco. In 1957–58, these industries accounted for 78.38 per cent. of all females in factories. In two classes only did the number of females exceed the number of males, namely, in Class VI., Textiles, where there were 131 females to every 100 males and in Class VIII., Clothing, with 236 females to every 100 males. The following table shows the average number of males and females employed in each of the four classes in 1957–58:—

MALES AND FEMALES EMPLOYED IN PARTICULAR INDUSTRIES, 1957-58.

Class.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

(a) Number of females per 100 males.

§ 7. Child Labour in Factories.

1. **Conditions of Child Labour.**—The employment of young persons in factories in the States is regulated by Acts of Parliament, as is the case with the employment of female labour. The object of the restrictions imposed is to ensure, amongst other things, that a proper period shall be devoted to primary education, and that the early years of labour shall not exhaust the worker before the attainment of full growth.

2. **Number of Children Employed, 1939, 1957 and 1958.**—In the returns for the various States, the term "child" denotes any person under sixteen years of age. The decline in the number of children employed from the peak of 33,553 reached in June, 1940, to 15,634 in June, 1958, was probably caused by several factors, including (i) the raising of the school leaving age in New South Wales and Tasmania, (ii) fewer children available for employment owing to the decline in the birth rate and (iii) the high level of employment which enabled parents to keep their children at school beyond the statutory leaving age.

The following table shows the number of children of each sex employed in manufacturing industries in June of the years mentioned:—

FACTORIES: CHILDREN(a) EMPLOYED, JUNE.

State.	1939.			1957.			1958.		
	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.
New South Wales	5,759	7,084	12,843	2,584	1,981	4,565	2,575	1,929	4,504

Total	8,710	6,924	791,098	244,052	1.10	2.84

(a) Under sixteen years of age.

(b) Excludes working proprietors.

4. **Apprenticeship.**—In all the States, Acts are in force for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These Acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

§ 8. Value of Production, Materials Used, Salaries and Wages.

Note.—In all tables relating to salaries and wages paid in factories, the amounts drawn by working proprietors are excluded.

1. **General.**—The gross value of factory output for 1957–58 was £4,273,882,000, of which £2,386,361,000 was the value of the materials used, including containers, etc., tools replaced and repairs to plant and buildings, and £158,798,000 the value of the power, fuel and light used. The difference between the sum of the last two amounts and the gross value of output, namely, £1,728,723,000, represents the net value of factory production defined as “the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production other than depreciation (see para. 6 of this section, p. 175). The gross value of factory output and the value of materials used each contain inherent elements of duplication, as the output of some factories becomes the materials used in other factories. They therefore have little statistical significance. The net value of factory production indicates the relative importance of manufacturing in the Australian economy in constant money terms. The total amount of salaries and wages paid in factories in 1957–58 was £929,290,000. This figure, which excludes amounts drawn by working proprietors, was the highest ever recorded and shows an increase of £38,200,000 or 4.29 per cent. on that for the previous year.

2. Salaries and Wages Paid.—(i) *In Classes of Industry, 1957–58.* The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table:—

FACTORIES: SALARIES AND WAGES PAID, 1957–58.

(ii) *Totals and Averages, 1938–39 and 1953–54 to 1957–58.* The following table shows the total amount of salaries and wages paid, and the average amount paid per employee in each State, for each of the years indicated. The figures exclude working proprietors and the amounts drawn by them:—

FACTORIES: TOTAL AND AVERAGE SALARIES AND WAGES PAID.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
-------	--------	------	---------	----------	----------	------	-------

TOTAL AMOUNT PAID (£'000).

1938–39	44,606	36,027	10,887	8,169	4,574	2,480	106,743
1953–54	293,586	236,037	63,433	63,110	31,590	17,381	705,137
1954–55	326,615	262,750	68,300	70,373	34,738	18,864	781,640
1955–56	359,023	286,944	72,460	76,237	37,207	21,598	853,469
1956–57	378,332	296,608	77,780	77,818	36,916	23,636	891,090
1957–58	396,692	310,540	78,958	79,844	37,935	25,321	929,290

AVERAGE PER EMPLOYEE (£.)

1938–39	201.77	185.64	210.78	195.57	207.90	188.31	196.31
1953–54	758.65	743.29	678.35	761.27	703.26	734.60	742.62
1954–55	804.43	790.00	714.83	810.32	744.17	771.27	789.35
1955–56	860.91	841.16	740.93	848.43	785.23	828.65	837.35
1956–57	900.06	869.21	789.63	872.87	801.95	886.68	871.98
1957–58	923.40	904.81	814.86	891.80	829.22	936.70	900.46

In comparing the figures in the preceding table, regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, a large number of hands are employed in Class VIII., Clothing, comprising a relatively high percentage of women and children. The highest average wages per employee in 1957-58 were paid in Tasmania, New South Wales and Victoria, in that order.

The average earnings per employee rose annually from 1938-39 to 1943-44 when a level of £291 was attained as a result of war-time conditions. In 1944-45, the average dropped to £285 and remained at this level in 1945-46. From 1945-46, average earnings rose each year and in 1957-58 reached a record level of slightly over £900.

(iii) *Total and Average Earnings of Males and Females, 1938-39 and 1953-54 to 1957-58.* Particulars for these years are given in the following table:—

FACTORIES : TOTAL AND AVERAGE SALARIES AND WAGES—MALES AND FEMALES.

3. Power, Fuel and Light Used.—(i) *In Classes of Industry, 1957-58.* The expenditure by factories on power, fuel and light, including the value of lubricants and water, is of considerable importance; in 1957-58 it amounted to a new high level of £158,798,000, an increase of £5,688,000 as compared with the previous year and more than ten times the corresponding value in 1938-39. The following table shows the value of power, fuel and light, etc., used in the different classes of industry:—

**FACTORIES: VALUE OF POWER, FUEL AND LIGHT USED(a), 1957-58.
(£'000.)**

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

Tar (Fuel)	"	32,618	4,170	251	2,540	754	469	40,802

(a) Includes 672,000 tons of Leigh Creek coal.

(iv) *Total Value, 1938-39 and 1953-54 to 1957-58.* The next table shows the amounts expended on power, fuel and light during these years:—

FACTORIES: VALUE OF POWER, FUEL AND LIGHT USED.(a)

(£'000.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
1938-39	7,652	4,000	1,423	1,018	1,169	438	15,700
1953-54	58,447	29,080	10,655	12,500	6,972	2,804	120,458
1954-55	60,925	31,767	11,620	12,897	8,046	3,127	128,382
1955-56	66,469	34,598	11,980	12,830	9,053	4,097	139,027
1956-57	71,445	40,381	13,130	14,130	9,225	4,799	153,110
1957-58	73,452	42,762	13,152	14,933	9,425	5,074	158,798

(a) Includes value of lubricants and water.

4. *Value of Materials Used.*—(i) *In Classes of Industry, 1957-58.* The value of materials used (which includes the value of containers, packing, etc., the cost of tools replaced and repairs to plant) in factories in Australia in 1957-58 reached £2,386,361,000, representing

55.8 per cent. of the value of the final output (*see* para. 5). The following table shows the value of the materials used in various classes of industry in each State:—

FACTORIES: VALUE OF MATERIALS USED, 1957-58.(a)

(a) *See* para. 1 of this section, p. 169.

5. *Value of Output.*—(i) *In Classes of Industry, 1957-58.* The value of the output of factories in the various classes in each State in 1957-58 is shown in the following table. It represents the selling value at the factory (excluding delivery costs and charges) of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the net value of factory production (*see* paras. 1 and 6 of this section).

(a) See para. 1 of this section p. 169.

6. Value of Production.—(i) *In Classes of Industry, 1957-58.* The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production."

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the "value of output". All these deductions with the exception of depreciation are included in the items "value of materials used" and "value of fuel used" as defined above. On account of the difficulty experienced in securing accurate figures for depreciation, it was agreed that no deduction should be made on this account. The net value of production as given in the following tables is obtained therefore, by deducting only "value of materials used" and "value of fuel used" from the "value of output".

Only certain selected items of costs are recorded in the annual census of production. It must not, therefore, be inferred that, when wages and salaries are deducted from the value of production, the whole of the "surplus" is available for interest and profit, as many miscellaneous expenses such as taxation, insurance, advertising and other overhead charges, as well as depreciation, also have to be taken into account.

The value of factory production, therefore, approximates "net value added" in the manufacturing process. It amounted in 1957-58 to £1,729 million to which Class IV., Industrial Metals, etc., with £694 million made the greatest contribution. The net value of production in 1957-58 showed an increase of £107 million (6.57 per cent.) over the figure for 1956-57 and £1,525 million over the value of production recorded in 1938-39.

The following table shows the value of production in 1957-58 in each State for the various classes of industry:—

FACTORIES: VALUE OF PRODUCTION, 1957-58.(a)

(a) See para. 1 of this section, p. 169.

(ii) *Total and Averages, 1938-39 and 1953-54 to 1957-58.* The value of production and the amount per person employed and per head of population are shown in the following table. For Australia as a whole, the value of production per head of population increased from £29.34 in 1938-39 to £178.45 in 1957-58. For value per person employed, the increase was not quite so pronounced (from £360 per head in 1938-39 to £1,610 in 1957-58).

§ 9. Value of Land, Buildings, Plant and Machinery.

1. General.—The following statement shows the value of land and buildings and of plant and machinery used in connexion with manufacturing industries during the year 1957-58:—

FACTORIES: VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(a), 1957-58.

(£'000.)

Value of—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Land and buildings	350,169	280,207	63,927	61,084	36,846	59,453	851,686
Plant and machinery	415,838	310,879	104,598	79,336	63,840	46,860	1,021,351
Total ..	766,007	591,086	168,525	140,420	100,686	106,313	1,873,037

(a) Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. The totals shown in the table consequently do not represent the actual amount of capital invested in the items specified.

2. Value of Land and Buildings.—(i) *Total for Australia.* The following table shows, for Australia as a whole, the approximate value of land and buildings occupied in connexion with manufacturing industries for 1938-39 and 1953-54 to 1957-58:—

FACTORIES: VALUE OF LAND AND BUILDINGS(a), AUSTRALIA.
(£'000.)

1956-57	303,981	252,024	58,654	55,343	35,520	56,473	761,995
1957-58	350,169	280,207	63,927	61,084	36,846	59,453	851,686

(a) Includes estimated value of rented premises.

Prior to 1929-30, the increase in the value of land and buildings was uninterrupted, rising from £23 million in 1903 to £118 million in 1929-30, an increase of £95 million in 27 years. During the three years ended 1932-33, there was a decline of £12 million to £105.8 million, but since that year the value has risen annually and it stood at £851.7 million in 1957-58.

3. *Value of Plant and Machinery.*—(i) *Total for Australia, 1938-39 and 1953-54 to 1957-58.* The following table shows for Australia the approximate value of plant and machinery used in factories:—

FACTORIES: VALUE OF PLANT AND MACHINERY(a), AUSTRALIA.

(£'000.)

Grand Total	143,662	580,715	698,292	803,540	923,954	1,021,351

(a) Includes estimated value of rented plant and machinery.

Except for the years 1930-31 to 1933-34, when decreases were recorded, there has been a continuous increase in the value of plant and machinery in factories in Australia. The increase in 1957-58 of £97.4 million over 1956-57 extended over all industrial classes except Classes VII., Skins and Leather, etc., VIII. Clothing (except Knitted) and XIV. Musical Instruments. The greatest increase occurred in Class IV., Industrial Metals, Machines, Conveyances.

(ii) *Totals in each State.* The following table shows the value of plant and machinery in each State during the years 1938–39 and 1953–54 to 1957–58. During 1957–58 increases occurred in all States, New South Wales showing the largest increase, £52.5 million.

§ 10. Principal Factory Products.

The factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau and in the bulletin *Secondary Industries*.

The following table shows the total recorded production of some of the principal articles manufactured in Australia during the years ended 30th June, 1956 to 1958. A more complete list, together with values, where available, is published in the bulletin *Secondary Industries*.

Zinc Oxide (See Pigments)

(a) Includes stoves, cookers, etc. (b) Production commenced late in 1955-56. Number produced in 1958-59 was 318,899. (c) Excludes wheatmeal for baking included with flour. (d) Including mixtures predominantly of the fibre mentioned.

§ 11. Individual Industries.

1. **General.**—Particulars on pages 154–181, §§ 2–9 afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this work, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour and capital or for other features of special interest. Where there are only one or two establishments in a particular industry in the State or the Commonwealth, details of activities are not published, but are combined with some other factory group so that operations of individual concerns will not be disclosed.

The statistics in the following tables should be read in the light of the following definitions.

Factory. A factory is taken to be a manufacturing establishment in which four or more persons are employed or in which power, other than manual, is used.

Average Number of Persons Employed. All persons employed in the manufacturing activities of a factory are counted as factory employees, including working proprietors and “out-workers”. The average number of persons employed means, in general, the average number over the whole year and not the average over the period worked.

Value of Materials Used. This item includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant.

Value of Fuel, etc., Used. This item includes also the cost of power and light used, of lubricants and of water.

Value of Output. The amounts given under this heading represent the selling value, at the factory, of goods made or processed during the year, including by-products, also the value of other work done.

Value of Production. The value of production is obtained by deducting “Value of materials used” and “Value of fuel used”, as defined above, from the “Value of output”.

Rated Horse-power of Engines Used. Statistics of power used in factories other than Central Electric Stations relate to the “rated horse-power” of engines ordinarily in use.

For more detailed definitions see § 1, para. 6 of this chapter, page 150.

Details of some of the principal articles produced in factories in Australia during the years 1955–56 to 1957–58 are shown in the table on the preceding pages (§ 10).

2. **Portland Cement and Cement Goods.**—The manufacture of portland cement and cement goods is an important industry included in Class I. Particulars for the three industries under this general heading are shown for 1957–58 and for a series of years in the following table:—

PORTLAND CEMENT, ASBESTOS CEMENT SHEETS, ETC., AND OTHER CEMENT GOODS.

AUSTRALIA, 1957–58.

3. Chemicals, Drugs and Medicines.—In 1945-46, the classification of factories was amended to provide for the separate tabulation of factories engaged in the production of Industrial and Heavy Chemicals and Acids and those engaged in producing Pharmaceutical and Toilet Preparations, which previously had been combined. Details for each of these industries are given in the next two tables for 1957-58 with comparable figures for previous years. However, it should be noted that, in order to avoid the publication of confidential information, particulars relating to Industrial and Heavy Chemicals include details for the Explosives industry.

INDUSTRIAL AND HEAVY CHEMICALS AND ACIDS (INCLUDING EXPLOSIVES).

1957-58.

7. *Iron and Steel Works and Engineering.*—(i) *General.* In 1945-46, the classification of factories was amended to provide for the tabulation in four separate groups of those industries previously included under Iron and Steel, and Engineering. The first group (Smelting, Converting, Refining and Rolling of Iron and Steel) covers blast furnaces, steel works and rolling mills. The second group, Foundries (Ferrous), covers those engaged in the founding of iron and steel. The third group (Plant, Equipment and Machinery including Machine Tools) covers those industries engaged in the production of boilers, engines, machines and machinery, machine tools, structural steel fabrications, steel furniture, etc. The fourth group (Other Engineering) includes jobbing and general engineers, not elsewhere included. Detailed statistics for the four groups mentioned are shown in the following tables.

(ii) *Smelting, Converting, Refining and Rolling of Iron and Steel.* In the following table, particulars are shown for each State for 1957-58 and for Australia in selected years for the group Smelting, Converting, Refining and Rolling of Iron and Steel:—

SMELTING, CONVERTING, REFINING AND ROLLING OF IRON AND STEEL.

8. *Extracting and Refining of Non-ferrous Metals; Alloys.*—The following table shows particulars of establishments engaged in metal extraction and ore reduction including secondary recovery of metals, but excluding blast furnaces engaged in production of pig iron from iron ore, for each State during 1957-58 and for Australia for a series of years. It should be noted that as Ore Beneficiation and Concentration, formerly included as part of this section of Manufacturing Industry, was transferred to the Mining Industry in 1952-53 details for 1938-39 are not comparable with those for later years.

EXTRACTING AND REFINING OF NON-FERROUS METALS: ALLOYS.

(a) Government and Local Authority only.

Two railway workshops in the Northern Territory are engaged in repairing rolling stock, etc., no new goods being manufactured. Particulars of these establishments are not included in any of the tables in this chapter.

11. **Motor Vehicles.**—The industries catering for the motor trade are included in Class IV., Industrial Metals, Machines and Conveyances. In the table below, a summary is given of the principal statistics for 1957–58 for each branch of industry associated with the motor trade of Australia.

MOTOR VEHICLES: CONSTRUCTION, ASSEMBLY, REPAIRS, ETC., AUSTRALIA.
1957-58.

Items.	Construc- tion and Assembly.	Repairs.	Motor Bodies. (a)	Motor Acces- sories.	Total.
Number of factories	66	9,038	1,550	255	10,909
Number of persons employed	17,864	56,829	25,953	9,734	110,380
Salaries and wages paid £'000	18,219	41,047	23,520	9,100	91,886
Value of power, fuel, etc., used £'000	1,272	1,312	1,022	644	4,250
Value of materials used £'000	40,041	45,706	46,118	11,859	143,724
Value of production £'000	32,152	64,589	35,260	16,382	148,383
Total value of output £'000	73,465	111,607	82,400	28,885	296,357
Value of land and buildings £'000	16,107	53,416	13,684	6,354	89,561
Value of plant and machinery £'000	16,921	12,523	10,837	6,349	46,630
Horse-power of engines ordinarily in use h.p.	54,525	63,194	55,880	37,665	211,264

(a) Includes motor body repairing, panel beating, duco spraying, etc.

In the next table, similar details are shown on a State basis for 1957-58 and for Australia for selected years for these industries combined:—

MOTOR VEHICLES: CONSTRUCTION, ASSEMBLY, REPAIRS, ETC.
1957-58.

The table below shows the production and imports of motor bodies for 1938-39 and 1953-54 to 1958-59:—

PRODUCTION AND IMPORTS OF MOTOR BODIES(a): AUSTRALIA.

Items.	1938-39.	1953-54.	1954-55.	1955-56.	1956-57.	1957-58.	1958-59. (b)
Motor Bodies(a)—							
Made No.	79,436	113,833	126,079	129,700	120,781	160,675	169,992
Assembled from Panels imported or made elsewhere No.	(c)	43,077	62,383	94,676	77,548	81,630	78,482
Imported (d) No.	532	26,874	37,924	19,041	7,062	(e) 5,890	(e) 6,104

(a) Excludes sidecars. (b) Preliminary—subject to revision. (c) Not available.
(d) Includes bodies on complete vehicles imported. (e) Since 20th March, 1958, includes only those bodies imported as complete vehicles.

12. Agricultural Machines and Implements.—Owing to the extensive agricultural activities conducted in Australia and the demand for modern mechanized farm equipment, the manufacture of agricultural implements constitutes an important branch of Australian industry. The articles manufactured include a wide range of implements for tillage, seeding and planting, and the harvesting of crops. Other farm machinery made includes windmills, chaff-cutters and machinery used in the dairying industry.

The following table shows details of establishments classified as agricultural implement works in each State for 1957-58 and for Australia for a series of years:—

AGRICULTURAL MACHINES AND IMPLEMENTS.

1957-58.

13. **Wireless and Amplifying Apparatus.**—Prior to 1930-31, statistics of the manufacture of wireless and amplifying apparatus were grouped with those relating to other electrical apparatus, but the new factory classification adopted in that year provided for separate details to be shown for Wireless Apparatus. The industry is confined mainly to New South Wales, Victoria and South Australia. Technical advances and the requirements of the fighting forces led to considerable expansion in the industry during the 1939-45 War and this development has continued, with one or two exceptions in each subsequent year. The introduction of television services in 1956 gave a further stimulus to the industry. The number of broadcast listeners' licences increased from a third of a million in 1930-31 to nearly 2,264,000 at 30th June, 1959, and this increase reflects the advancement of the industry during that period. At 30th June, 1959, 577,500 television viewers' licences had been issued.

(a) Including radiograms and car radios.

NOTE.—There were 383,500 wireless receiving sets (including radiograms) and 319,000 television receiving sets made in 1958-59.

14. Cotton.—(i) *General.* Cotton has been grown in Australia since 1860, but never on a very large scale. The average annual quantity of unginned cotton produced was 18 million lb. during the five years ended 1938–39, and slightly over 4½ million lb. in the five years ended 1957–58. The growing of cotton, which is restricted to Queensland, is referred to in some detail in Chapter XXII.—Agricultural Production.

(ii) *Ginning.* The ginning and marketing of cotton is controlled by the Queensland Cotton Board. The Board operates ginneries and processes by-products. The production of raw cotton is insufficient for local factory requirements and is supplemented by imports from overseas, chiefly (in 1958–59) from India, Pakistan, Brazil, Mexico, Peru and the United States of America.

(iii) *Spinning and Weaving.* The post war expansion in the spinning and weaving section of the cotton industry marks an important stage in its development. New factories have been established and Australia is now producing an extensive range of cotton goods, including duck and canvas from cotton or flax, denims, drill, etc., tyre cord and tyre cord fabric. The number of establishments engaged in cotton spinning and weaving in Australia and other particulars of the industry are shown in the following table for the years 1938–39 and 1953–54 to 1957–58.

15. Wool Carding, Spinning and Weaving.—The importance of this industry is emphasised by the fact that Australia is the world's chief source of wool and the development of the woollen industry since its establishment at an early period in Australian history is of singular interest. The production consists chiefly of woollen cloth and tweed, worsted cloth, rugs, blankets and yarn, all of which have acquired a reputation for purity and durability.

The following quantities of yarn were used in these establishments during 1957-58:—Worsted or woollen 8,629,955 lb.; mixtures predominantly woollen or worsted, 1,469,091 lb.; cotton, 10,837,056 lb.; mercerised cotton, 368,103 lb.; rayon, spun, 7,575,573 lb.; rayon filament, 2,916,129 lb.; silk, 17,932 lb.; nylon, spun, 633,711 lb.; nylon filament, 2,936,063 lb.; other yarns, 747,542 lb. Production of garments and stockings is shown in § 10 (*see p. 182*).

17. *Tanning, Currying and Leather Dressing.*—(i) *Details of Industry.* In Class VII. the most important industry is tanning. Formerly the production of tanneries in Australia was confined to the coarser sorts of leathers, but there are now very few kinds which cannot be produced locally, and an export trade has been built up in some varieties.

21. **Boots and Shoes.**—(i) *Details of Industry.* Boot and shoe factories hold an important place in respect of both employment afforded and extent of output. The following tables refer to boot and shoe factories as distinct from those devoted to repairing, except in Tasmania, where it has been necessary to include details of boot and shoe repairing, in order to avoid disclosure of confidential information for that State. Factories engaged in the manufacture of sand shoes, goloshes and gum, etc., boots of rubber are not included here, being classified under Rubber Goods, *see* para, 38, page 212.

(ii) *Production of Flour and By-products.* The production of flour by the mills in each State (including other than flour mills) for the years 1938-39 and 1953-54 to 1958-59 was as follows:—

FLOUR-MILLING: PRODUCTION OF FLOUR.(a)

(Tons of 2,000 lb.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1938-39 ..	547,162	436,829	84,314	146,262	138,583	19,582	1,372,732
1953-54 ..	603,575	473,842	138,524	164,907	197,654	30,556	1,609,058

1955-56 ..	571,084	454,628	169,793	154,327	193,490	27,983	1,571,305
1956-57 ..	621,476	461,663	170,397	164,417	184,717	29,157	1,631,827
1957-58 ..	416,490	484,993	143,613	138,537	163,347	28,739	1,375,719
1958-59 (b) ..	440,392	436,764	151,711	136,844	164,475	29,141	1,359,327

(a) Includes wheatmeal for baking and sharps.

(b) Preliminary, subject to revision.

In addition, 523,000 tons (2,000 lb. per ton) of bran and pollard were produced in 1957-58 and 500,000 tons in 1958-59. The total quantity of wheat ground in flour mills was 62,300,000 bushels in 1957-58 and 62,254,000 bushels in 1958-59.

23. **Bakeries.**—Information regarding establishments in which the manufacture of bread, cakes, etc., was carried on is given in the table below. It should be noted, however, that the details refer only to establishments coming within the definition of a factory as explained at the beginning of this section. For that reason, the tables do not give complete details of the industry, as a large number of bakeries, etc. not coming within the definition are excluded. This is true of all other industries covered by the statistics of manufacturing production, but, in view of the omission of such a large number of establishments in this instance, special mention is deemed necessary.

BAKERIES (INCLUDING CAKES AND PASTRY).

(a) Includes confectionery in Tasmania.

24. **Sugar-mills.**—(i) *General.* Sugar-cane is grown in New South Wales and Queensland and particulars of area, yield, etc., are given in extended detail in Chapter XXII.—Agricultural Production.

The products of the sugar-mill are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. Particulars of cane crushed and sugar produced embodied in the following table refer to the quantities treated during the years ended 30th June, irrespective of the season in which the cane was grown; consequently, the figures relating to cane crushed and sugar produced may differ slightly from those given in Chapter XXII.—Agricultural Production, which relate to harvest years.

(ii) *Details for States.* The following table shows details of the operations of sugar mills in New South Wales and Queensland for the years 1938-39 and 1953-54 to 1957-58:—

25. *Sugar-refining.*—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated on in the earlier years coming chiefly from Mauritius and the East. In 1957-58, there were two sugar refineries in Queensland and one each in New South Wales, Victoria, South Australia and Western Australia. The total quantity of raw sugar treated amounted to 521,920 tons for a yield of 493,093 tons of refined sugar.

26. *Confectionery.*—Particulars for 1957-58 for each State and for Australia for a series of years are shown hereunder:—

Horse-power of engines ordinarily in use h.p.	7,873	31,721	32,661	38,508	45,820	55,824

(ii) *Production.* During the 1939–45 War, production of jams increased greatly and an output of 171 million lb. was attained in 1943–44. Production afterwards decreased, but attained a new record of 198.5 million lb. in 1947–48. It dropped to 107.8 million lb. in 1957–58. Preliminary figures for 1958–59 show production as being 75.0 million lb.

Production of preserved fruit in 1957–58 was 349.4 million lb., the highest on record, the previous highest level being 338.6 million lb. in 1953–54. Preliminary figures for 1958–59 show production as being 317.1 million lb.

There has also been a marked development in the production of canned vegetables. In 1938–39, output totalled 10.3 million lb. but, as a result of the war-time demand by the armed services, production reached the record level of 119.1 million lb. in 1944–45. However, it has since declined and in 1957–58 amounted to 87.0 million lb. Preliminary figures for 1958–59 show production as being 66.6 million lb.

The following table shows the total quantity of jams, pickles, sauces and other items manufactured in each State in 1957–58:—

JAMS, PRESERVED FRUIT AND VEGETABLES, PICKLES AND SAUCES: 1957–58.

(a) Not available for publication; figures are included in the total for Australia. (b) The cheese used in the manufacture of these products is included in Cheese (Green Weight) made as shown above.

The butter, cheese and condensed milk industries are dealt with more fully in Chapter XXIV.—Farmyard, Dairy and Bee Products.

30. **Meat and Fish Preserving.**—The industries included in this group are engaged chiefly in the freezing and preserving of meat. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. The substitution of chilled for frozen meat exported is referred to in Chapter XXIII.—Pastoral Production. In recent years, there has been considerable expansion in the canning of meat and fish.

MEAT AND FISH PRESERVING.

1957-58.

Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in Chapter XXIII.—Pastoral Production.

31. **Breweries.**—(i) *Details of Industry.* The following table gives particulars of breweries in each State for the year 1957-58 and for Australia for a series of years. It should be noted, however, that the data shown are not strictly comparable throughout, owing to the inability or failure of some breweries to furnish a separate return for each branch of activity. Consequently the figures for some States include details of employment, wages, output, etc., not directly concerned with the brewing of beer, although associated with it. These extraneous activities include cooperage, malt wort, aerated waters, etc.

BREWERIES.

(a) Excludes Excise Duty.

(ii) *Production, Consumption, Materials Used.* The quantity of ale, beer and stout brewed fell from 73.7 million gallons in 1928-29 to 49.8 million gallons in 1931-32, but thereafter increased each year to 109.2 million gallons in 1941-42. Under the Control of Liquor Order which operated between March, 1942, and March, 1946, the production of beer was restricted and consequently annual output remained static at about 100 million gallons from 1942-43 to 1944-45. Thereafter, production increased, and in 1958-59 amounted to over 228 million gallons.

The average annual consumption of ale, beer and stout prior to the economic depression of the early thirties exceeded 11 gallons per head of the population: it dropped to 7.3 gallons in 1931-32, increased to 13.8 gallons in 1941-42 and declined again to about 13 gallons during the period of control. The consumption per head had increased to 22.1 gallons by 1958-59.

The table below shows the quantities of materials used and the quantity and value of ale, beer (excluding waste beer) and stout brewed in each State during 1957-58:—

Excise Duty.

(b) Excludes

For many years the production of locally-grown leaf was comparatively small, and manufacturers were dependent on imported leaf for the supply of their raw materials. Increased import duties stimulated local production, and the quantity of Australian leaf used by manufacturers rose from 1.2 million lb. in 1929-30 to over 3 million lb. in 1930-31. During the 1939-45 War, about 4.7 million lb. of Australian-grown leaf was used annually. and the 1957-58 usage was 7.2 million lb. For further information see Chapter XXII.—Agricultural Production.

Imports of tobacco during 1957-58 comprised: manufactured tobacco, 402,388 lb., cigars, 86,165 lb., cigarettes, 370,842 lb., unmanufactured tobacco, 43,029,219 lb.; and in 1958-59 were 367,441 lb., 91,394 lb., 391,203 lb. and 38,671,462 lb. respectively.

34. **Sawmills, etc.**—The most important industry in Class X. is sawmilling. Because of difficulties associated with the classifying of sawmills into forest and town mills, they have been combined in the following table, together with plywood and veneer mills.

SAWMILLS AND PLYWOOD AND VENEER MILLS.

The sawmill output of native timber, which declined from 740 million super. feet in 1925-26 to the abnormally low figure of 237 million super. feet during the depth of the depression, recovered to 717 million super. feet in 1938-39 and by 1958-59 had risen to 1,480 million super. feet. Further reference is made to the sawmilling industry in Chapter XXV.—Forestry.

35. **Cabinet and Furniture Making and Upholstery.**—These industries constitute the principal manufactures in Class XI. The following table shows particulars for each State in 1957-58:—

36. **Printing Works.**—Printing and bookbinding rank high in importance among the industries of Australia and in 1957–58 afforded employment for 40,303 employees, and paid £36,096,000 in salaries and wages while the value of output amounted to £119,993,000. The first table below gives particulars of establishments engaged in general printing in each State for 1957–58. These establishments include those engaged in lithographic printing, bookbinding, paper ruling and linotyping and Government printing works. Establishments producing newspapers and periodicals are shown separately in the second table:—

37. **Paper Making.**—Although the paper manufacturing industry has been established in Australia for many years, it was not until the manufacture of paper pulp from indigenous timber commenced in 1938–39 that any marked development occurred.

Plants producing pulp from eucalypt timber are operating in Victoria and Tasmania, whilst in South Australia pulp is being produced from locally-grown softwoods. The production of pulp rose from 6,000 tons in 1938–39 to 88,000 tons in 1946–47. It remained at about this level until 1949–50 but has since increased steadily to a total of nearly 208,000 tons in 1957–58.

The number of factories operating in 1957–58 comprised four in New South Wales, seven in Victoria, two in Queensland, one each in South Australia and Western Australia, and three in Tasmania. In Tasmania, newsprint, writing and printing papers are produced, and in the other States wrappings, other papers and boards. Particulars for this industry are shown in the following table.

(ii) *Coal Used and Production.* The following table shows details for 1957-58:—

GAS-WORKS: COAL USED AND PRODUCTION, 1957-58.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Coal used '000 tons	834	504	200	(a)	54	(a)	1,779
Gas produced million cu. ft.	22,506	16,684	3,153	(a)	1,420	(a)	47,655
Gas sold	18,732	14,295	2,701	(a)	1,223	(a)	40,394
Coke produced (b) '000 tons	429	199	76	(a)	21	(a)	832

(a) Not available for publication; figures are included in the total for Australia. (b) In addition 2,264,032 tons of metallurgical coke were made in Coke Works in 1957-58.

Since 1938-39, when the output of gas was 21 thousand million cubic feet, production has increased each year and reached 48,655 million cubic feet with an equivalent of 245,216 thousand therms (1 Therm=100,000 B.T.U.), in 1958-59.

CHAPTER VII.

ELECTRIC POWER GENERATION AND DISTRIBUTION.

This chapter is divided into three major parts. A.—Introduction, which deals briefly with the resources, generation and distribution, and future development of electric power in Australia; B.—The Snowy Mountains Hydro-electric Scheme; and C.—The origins, development, present situation and new projects of electrical systems in each Australian State and Territory. A Statistical Summary is appended.

It should be noted that the information contained in the chapter relates to situations existing and projects contemplated in 1959 and that it may be considerably affected by changes in policy or plans, or by developments in the projects themselves.

A. INTRODUCTION.

1. **Distribution of Population and Location of Power Resources.**—The geographical pattern of electric power generation and distribution in Australia has been affected by two main influences—the distribution of population, with a resulting distribution of industry, and the location of fuel and water resources.

The Australian population increased between 1939 and 1959 from approximately 6,968,000 to 10,061,000. The two principal centres of population and industry, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power and their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of the Commonwealth materially influences the distribution of industrial population and the location of major electric power stations.

By far the most important source of energy used in the production of electric power in Australia is coal. At 30th June, 1958, thermal power equipment represented 76 per cent., hydro plant 19 per cent. and internal combustion equipment 5 per cent. of the total installed generating capacity.

Most of Australia is poorly supplied with water, only about 15 per cent. receiving an annual rainfall of 30 inches or over. This is confined largely to Tasmania and to the narrow coastal strip along the east coast. The possibility of establishing large hydro or steam stations in inland areas is, therefore, strictly limited by the lack of sufficient water.

The only region on the mainland of Australia high enough to receive reliable winter snowfall, and from which, therefore, reasonably constant water supplies throughout the year can be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales through to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 3,000,000 kW within the next 25 years. The two major construction projects in this area are the Snowy Mountains and Kiewa schemes. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount there available is only small compared with the potential of the Alpine region. In Tasmania, hydro-electric resources have been estimated at about 50 per cent. of the total Australian hydro-electric potential. Whereas on the mainland the chief source of energy is coal, water occupies this position in Tasmania.

2. **Electric Power Generation and Distribution.**—(i) *Ownership of Undertakings.* At the beginning of this century, Australia's electrical undertakings were carried on mainly by private enterprise, but some measure of governmental control was exercised through various electric light and power Acts. This legislation was designed to provide standards of safety, and to define the scope and obligations of the private organizations engaged in producing electric power for sale. A trend towards public ownership commenced during the 1914–18 War and became more pronounced after the 1939–45 War. By 1959, all major

generating stations supplying the public were, in varying degrees, under the control of State statutory organizations constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies within the various States. There are, however, still a large number of small private and municipal enterprises generating power for supply to country towns, although central authorities are extending supply to these places wherever practicable. In many areas, however, it has been and remains the practice for central authorities to sell power in bulk to local distributing organizations which undertake reticulation.

In addition to the private, local government and statutory organizations which generate and/or distribute electricity for sale, there are numerous firms generating power for use in their own establishments, particularly those engaged in mining pursuits remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, and the power regularly produced for such internal consumption is, in any case, a relatively small proportion of the total power produced.

(ii) *Power Production and Generating Capacity.* In the period between 1938–39 and 1958–59, production of electric power in Australia increased by over 350 per cent. from 4,688 to 21,135 million kilowatt hours.

Since the 1939–45 War, industry and commerce have expanded rapidly, many new houses have been built and the population has increased by approximately 36 per cent. These factors, together with the extension of electricity supplies to rural areas and the increased use of domestic electric appliances, have all contributed to bring about a position where the greatly increased demand for power cannot be satisfied by the existing installed capacity of central generating stations.

At 30th June, 1958, installed generating capacity in Australia totalled approximately 4.88 million kW compared with 1.62 million kW in 1939, an increase of 200 per cent. In 1957–58, each kW of installed capacity produced an average of 4,057 kWh compared with an average of 3,000 kWh in 1938–39. These figures are based on Commonwealth totals; figures for the States vary, depending on such factors as the distribution of demand, number of consumers, and type of equipment employed.

B. SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME.*

1. *Snowy Mountains Hydro-electric Power Act, 1949.*—In July, 1949, the Commonwealth Government passed the Snowy Mountains Hydro-electric Power Act establishing the Snowy Mountains Authority.

The functions and powers of the Authority as defined in the Act are:—

- (a) to generate electricity by means of hydro-electric works in the Snowy Mountains Area;
- (b) to supply electricity generated to the Commonwealth:—
 - (i) for defence purposes;
 - (ii) for consumption in the Australian Capital Territory.

The Authority also is empowered to supply to a State, or to a State Authority, electricity not immediately required for defence purposes or for consumption in the Australian Capital Territory.

To enable it to perform its functions, the Authority is given power to construct, maintain, operate, protect, manage and control works:—

- (a) for the collection, diversion and storage of water in the Snowy Mountains Area;
- (b) for the generation of electricity in that area;
- (c) for the transmission of electricity generated by the Authority;
- (d) incidental or related to the construction, maintenance, operation, protection, management or control of any works otherwise specified in the Act.

The Authority is constituted by a Commissioner appointed by the Governor-General. He is assisted by two Associate Commissioners also appointed by the Governor-General.

* See also Chapter VIII.—Water Conservation and Irrigation, page 248 of this issue and special detailed article in Official Year Book No. 42, pp. 1103–1130.

The Snowy Mountains Act is supported by a detailed Agreement between the States of New South Wales and Victoria and the Commonwealth in regard to the construction and operation of the Scheme, the distribution of power and water, charges to be made for electricity, and other such matters. The Snowy Mountains Council established under the terms of the Agreement and consisting of representatives of the Commonwealth, the Authority and the two States, directs and controls the operation and maintenance of the permanent works of the Authority and the allocation of loads to generating stations.

2. *Geography of the Area.*—The Snowy Mountains Area in south-eastern New South Wales is the only part of the continent in which altitudes exceed 7,000 feet and in which there is a substantial area over the altitude of 6,000 feet. The precipitation which results from the presence of this barrier on the line of the prevailing winter depressions of Antarctic origin amounts to as much as 120 inches a year in the vicinity of Mt. Kosciusko, the highest point in Australia. The drainage from the snowfields is practically all to three systems—those of the Murray and Murrumbidgee Rivers, which flow inland, and that of the Snowy River, which flows southwards to Bass Strait.

3. *Description of the Scheme.*—(i) *General.* The Scheme involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. These two diversions divide the Scheme geographically into two sections, the Snowy-Tumut Development and the Snowy-Murray Development. The features referred to may be identified by reference to the map on page 223. For purposes of both power production and irrigation, it is necessary to provide a considerable degree of regulation of run-off and this will be achieved by the use of Lake Eucumbene formed by the construction of Eucumbene Dam to control the waters of the Eucumbene, Murrumbidgee and Tumut Rivers for the Snowy-Tumut Development and of the Snowy River for the Snowy-Murray Development.

(ii) *Snowy-Tumut Development.* This development comprises works for the diversion and regulation of the waters of the Eucumbene, Upper Tooma, Upper Murrumbidgee and Upper Tumut Rivers and their combined development through a series of power stations down the length of the Tumut itself. A major dam has been constructed on the Eucumbene River to create Lake Eucumbene with an ultimate usable storage of 3.5 million acre feet. The waters of the Upper Murrumbidgee River will be diverted into Lake Eucumbene by construction of a dam at Tantangara and a 10½ mile tunnel from Tantangara reservoir. From Lake Eucumbene, the water will flow through a 14 mile tunnel to Tumut Pond Reservoir on the upper reaches of the Tumut River where it will join the waters of the Tumut River itself and the waters of the Tooma River diverted to Tumut Pond Reservoir by a diversion dam and a 9 mile tunnel. A feature of this 14 mile Eucumbene-Tumut Tunnel will be its use during periods of high flow to divert waters of the Tumut River from Happy Jacks Shaft or from Tumut Pond back to Lake Eucumbene for storage.

From Tumut Pond, water will be conveyed by pressure tunnel to Tumut 1 underground Power Station (capacity 320,000 kW), returned to the Tumut River and then conveyed by another pressure tunnel to Tumut 2 underground Power Station (capacity 280,000 kW), thence discharging into Tumut 3 Reservoir at Lobs Hole also on the Tumut River.

Tumut 3 and Tumut 4 Power Stations will be constructed between Tumut 3 and Blowering Reservoirs. Blowering Dam is to be constructed by the State of New South Wales and will provide for the regulation of power station discharges for use for irrigation in the Murrumbidgee valley. The Authority will, however, construct another power station at the foot of this dam to make use of irrigation releases for power purposes.

(iii) *Snowy-Murray Development.* The principal features of the Snowy-Murray Development are the diversion of the main stream of the Snowy River by tunnel westwards through the Great Dividing Range into the Swampy Plain River in the catchment of the Upper Murray and the development of power on the western slopes of the Alps. The main works of the development will be:—

- (a) The construction of a tunnel from the Snowy River near Island Bend through the Great Dividing Range to Geehi Reservoir on the Geehi River and two power projects between Geehi Reservoir and the Swampy Plain River near Khancoban. The power stations associated with these two power projects, Murray 1 and Murray 2, will be the Scheme's largest stations and will have a combined capacity of 1,200,000 kW.

- (b) Construction of a tunnel from a small dam on the Snowy River near Island Bend to Eucumbene Dam to carry Snowy water to Lake Eucumbene for storage at times of high river flows. When river flows are lower than average, this stored water will be returned towards Island Bend and thence through the Snowy-Geehi Tunnel to Geehi Reservoir and Murray 1 and Murray 2 Power Stations.
- (c) The construction of a dam on the Snowy River near Jindabyne to store the residual flow of the Snowy and Eucumbene Rivers downstream from Island Bend and Eucumbene Dams, including the flows of major tributaries, the Crackenback and Mowamba Rivers, and the construction of a pumping plant, pipeline and tunnel to lift this water from Jindabyne Reservoir to the Snowy-Geehi Tunnel near Island Bend where it will join the flow to the Geehi Reservoir for use through Murray 1 and Murray 2 Power Stations.

Associated with the main Snowy-Murray diversion are power developments of the Upper Snowy and Upper Geehi Rivers. The Upper Snowy proposals provide for a series of three power projects utilizing the fall in the waters of the Snowy River from Kosciusko Reservoir at elevation 5,800 feet to Island Bend at elevation 3,900 feet. One of these, the Guthega Project, came into operation in February, 1955.

On the western side of the Divide, the waters of the Upper Geehi River and its tributary, Windy Creek, falling from an altitude of 5,200 feet to Geehi Reservoir at elevation 3,600 feet, will provide power in Windy Creek Power Station.

4. Utilization of Power.—*The future electric power plants on the mainland of Australia will be predominantly thermal or thermo-nuclear installations and in an electrical system in which the greater part of the energy is generated in thermal plants it is usually found that the hydro installations operate to the best advantage on peak load. However, the existing New South Wales and Victorian systems include a proportion of relatively old and less efficient installations which, for reasons of fuel economy, are also best used for the production of peak load power. Therefore, in order to utilize the potential of the Snowy Mountains Scheme most effectively, it is proposed to arrange the order of development so that the early stations will operate, initially, somewhat below the peak of the system load, with a progressive change to predominantly peak load operation as construction proceeds and as the load increases in magnitude.*

The Snowy Mountains Scheme is situated geographically about midway between the principal load centres of Sydney and Melbourne and will be connected to these centres by 330,000 volt transmission lines. It will, consequently, be in a strategic position to take advantage of the diversity in the power requirements of these two load systems, a most important factor in so far as it affects the economy of operation of the supply systems of the two States.

Although most of the output from the Scheme will go to the States of New South Wales and Victoria, the Commonwealth Government also has the right to draw from the Scheme its requirements of power and energy for the Australian Capital Territory and for defence purposes. For convenience, the Commonwealth's share of power and energy will be drawn from the New South Wales transmission network by an exchange arrangement between the Commonwealth and the Electricity Commission of New South Wales. After fulfilling the Commonwealth's requirements, the remaining power and energy from the Scheme will be divided between the States of New South Wales and Victoria in the ratio of 2 : 1.

5. Progress and Future Programme.—The first power station in the Scheme, Guthega, of 60,000 kW initial capacity, came into operation in February, 1955. This was followed by Tumut 1 Power Station, total capacity 320,000 kW, which came into operation progressively during 1959. Eucumbene Dam, which provides the major regulating storage for the Scheme, was completed in May, 1958, and water now being stored in Lake Eucumbene will be used later for power generation through the Tumut Power Stations. Completion of the Eucumbene-Tumut Tunnel in June, 1959, made possible the first major trans-mountain diversion of water. Construction is at present in progress on works to divert the Murrumbidgee River to Lake Eucumbene and the Tooma River to Tumut Pond Reservoir and on the second of the Tumut River Power Stations, Tumut 2, which, with a capacity of 280,000 kW, is planned to come into operation in 1962.

The next works to be constructed will be parts of the main Snowy-Murray Development and it is anticipated that the first production of power from the Murray 1 Power Station and the first trans-mountain diversion of the water from the Snowy River to the Murray will occur during 1966.

C. STATES AND TERRITORIES.

§ 1. New South Wales.

1. **General.**—In Official Year Book No. 39, an account was given, in some detail, of the origin and development of electricity generation and distribution in New South Wales, describing in particular the growth of the systems of the Sydney County Council, the Department of Railways, the Electric Light and Power Supply Corporation Ltd., the Southern Electricity Supply and the Clarence River County Council (now the Northern Rivers County Council). A description was also given of the legislation which constituted The Electricity Authority of New South Wales and the Electricity Commission of New South Wales as well as legislation existing prior to their constitution. At present, the three main Acts governing electricity supply in New South Wales are:—

- (i) The Local Government Act 1919 which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.
- (ii) The Electricity Development Act 1945–1957 which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.
- (iii) The Electricity Commission Act 1950–1954 which constituted The Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

2. **Organization.**—(i) *The Electricity Commission of New South Wales.*—The Commission, which was constituted under the Electricity Commission Act 1950–1954 consists of five members of whom one is a full-time Chairman. In its administration, the Commission is directly responsible to the Minister for Local Government.

When the Commission was established, 93 per cent. of the State's power requirements were generated by four bodies—the Sydney County Council, the Department of Railways, the Southern Electricity Supply (a division of the Department of Public Works) and the privately-owned Electric Light and Power Supply Corporation Ltd. The Electricity Commission Act 1950–1957 and the Electricity Commission (Balmain Electric Light Company Purchase) Act 1950 provided for the acquisition of the power stations and main transmission lines of those bodies. The transfer of the power stations and transmission lines of all these undertakings has now been effected. On 1st July, 1956, the Commission acquired the power station and bulk supply system of the Tamworth City Council, which supplied in bulk to a number of distributing bodies in the north of the State.

The main function of the Commission is the generation and transmission of electricity which it sells in bulk to distributing authorities (mainly local government bodies) throughout a large part of the State, to the government railways and tramways, and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources. An important exception is the hydro-electric potential of the Snowy Mountains region which is being developed by the Snowy Mountains Hydro-electric Authority, a Commonwealth Government body.

(ii) *Other Electricity Supply Authorities.* The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities—municipal and shire councils, electricity county councils (consisting of groups of shire and/or municipal councils) or private franchise holders. At 1st September, 1959, there were 68 of these supply authorities throughout the State of which 24 also generated part or all of their power requirements. The majority of country power stations are small oil engine plants which are becoming increasingly costly to operate. Consequently, they are gradually being closed down as the main transmission network is extended further afield.

Over the past few years, there has been a distinct trend towards the consolidation of supply areas, many of which have been regarded as being too weak individually to form satisfactory areas for distribution. Generally these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal areas grouped for electricity supply purposes only and administered by a county council of representatives elected by the constituent shire and municipal councils.

It is interesting to note that, of the 227 shires and municipalities in New South Wales, 203 are included in one or other of the 37 electricity county districts. Thirty-three of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council which at 30th June, 1959, was supplying 460,663 consumers in the Sydney Metropolitan Area. Unlike the other county councils, which are constituted under the provisions of the Local Government Act 1919, the Sydney County Council was specially constituted under the Gas and Electricity Act 1935.

(iii) *The Electricity Authority of New South Wales.*—The Electricity Authority was constituted under the Electricity Development Act 1945–1957, for the stated purpose of promoting and regulating the co-ordination, development, expansion, extension and improvement of electricity supply throughout the State. The Authority, which is a regulatory body only, consists of seven members of whom one is a full time Chairman. Like the Commission, it is responsible to the Minister for Local Government.

The main functions of the Authority are as follows:—

- (a) *Distribution.* Under the Act the approval of the Authority is required, *inter alia*, for the establishment or acquisition of an electricity trading undertaking by a local government council, for the granting or renewing by such a council of electricity franchise agreements or corresponding agreements with other councils, and for the giving or taking of bulk supplies of electricity. It also has power to formulate proposals for the establishment of county councils.

In exercising these powers, the Authority is mainly concerned with seeing that distributing authorities are sufficiently strong to provide an economical, efficient and satisfactory service. Its most important activities in this regard are in investigating supply areas and in making recommendations to the Minister for the consolidation of such areas into county districts. Many of the new county districts referred to earlier have been formed largely as a result of the Authority's advice.

- (b) *Rural Electrification.* The Authority administers the rural electricity subsidy scheme under which rural electrification throughout the State is progressing very rapidly (see para. 4, page 222).
- (c) *Safety.* The Electricity Development Act 1945–1957 contains provisions for the making of regulations relating to most aspects of safety and these powers are being used more and more extensively. Safety regulations now in force cover such matters as inspection of consumer's installations, licensing of electricians and electrical contractors, approval of electrical appliances, safety of linesmen and overhead line construction.
- (d) *Generation and Transmission.* The approval of the Authority is required for the establishment or extension of power stations and main transmission lines (with the exception of those of the Electricity Commission).

3. *Generation and Transmission.*—(i) *General.* Except in the Snowy Mountains district and in one or two other areas, New South Wales is lacking in major water power potential and for the generation of electricity the State is, therefore, dependent mainly on steam power stations. During the year ended 30th June, 1959, coal-fired stations generated 93.0 per cent. of the State's energy requirements, hydro-electric stations 6.4 per cent. and internal combustion plants 0.6 per cent.

The proportion of power generated in the hydro-electric stations will increase considerably with the future plant development of the Snowy Mountains Scheme by the Commonwealth Government but at no stage of its development will the Scheme supply more than 15 per cent of the State's energy requirements. Coal-fired steam power stations, therefore, will continue to supply the greater part of requirements for the foreseeable future.

(ii) *Major Generating Stations.* In New South Wales, the generation of electricity has followed the general world trend towards large centralized power stations supplying large areas through inter-connected transmission networks. The greater part of the coal-fired generating plant is now concentrated within the bounds of the industrial centres of Sydney, Newcastle and Wollongong, where most of the population is also located.

As at 30th June, 1959, the major power stations of the State system of the Electricity Commission of New South Wales and their installed capacities were as follows:—*Steam*—Bunnerong "A" and "B" (Sydney), 375,000 kW; Pyrmont "A" and "B" (Sydney), 220,000 kW; White Bay (Sydney), 172,000 kW; Ultimo (Sydney), 80,000 kW; Balmain (Sydney), 107,000 kW; Port Kembla, 60,500 kW; Zarra Street (Newcastle), 50,000 kW

Tallawarra (Lake Illawarra), 120,000 kW; Wangi (Lake Macquarie), 210,000 kW; Wallerawang (near Lithgow), 90,000 kW; Lithgow, 27,000 kW; Maitland, 20,000 kW; Penrith, 20,000 kW; Liverpool, 20,000 kW; Tamworth, 27,000 kW; *Hydro*—Hume (near Albury), 50,000 kW; Burrinjuck (near Yass), 20,000 kW. There were also various other steam, hydro and internal combustion stations aggregating 52,550 kW. The total installed capacity of the Electricity Commission's system was 1,721,050 kW.

It will be seen, therefore, that the greater part of the Commission's generating plant is concentrated within a hundred mile radius of Sydney—the largest stations outside this area being located at Hume, capacity 50,000 kW and at Tamworth, capacity 27,000 kW.

(iii) *Interconnected Network.* Some 97 per cent. of the population of New South Wales is supplied by distributing authorities who obtain power in bulk from the Electricity Commission's network. This system of 330 kV, 132 kV, 66 kV, 33 kV and 22 kV transmission lines covers most of the eastern portions of the State, extending geographically as far as 300 miles inland from the coast and linking the power stations with the load centres in this area.

In May, 1959, Australia's first 330 kV transmission line and 330 kV substation were put into service. The line is 85 miles long and connects the Snowy Mountains Hydro-electric Authority's Upper Tumut switching station with the new 330/132 kV substation located at Yass for the distribution of power through the Commission's interconnected system in the South-west portions of the State. The transformer capacity of 162,000 kVA at this new substation will be doubled before the end of 1959 and later will be raised to a designed capacity of 486,000 kVA.

At 30th June, 1959, there were also in service 1,340 miles of 132 kV lines (including 250 miles designed and built for 330 kV operation at a later date), and over 2,500 miles of 66 kV and lower voltage lines (including 314 miles built for eventual operation at 132 kV). The total capacity of transformers installed in the Commission's system exceeds 3,000,000 kVA.

(iv) *Separate Systems and Total State Installed Capacity.* There are a number of separate systems and isolated plants which have not yet been interconnected with the main network and which at 30th June, 1959, had an aggregate installed capacity of 27,923 kW. Some councils along the Victorian border receive bulk supplies from Victorian authorities.

A number of local government bodies have undertaken the development of independent power stations. Of these the more important are:—The Northern Rivers County Council which has constructed a steam power station at Koolkhan (near Grafton) with an installed capacity of 25,750 kW and the North-West County Council which has established a 12,500 kW steam power station on the Ashford coalfield.

The Tamworth system which formerly supplied power to an extensive district in the north of the State from Tamworth power station through 66 kV and 33 kV transmission lines was interconnected with the main system in June, 1958, by a newly constructed 330 kV transmission line from Muswellbrook to Tamworth (79 miles). This line is now being operated at 66 kV but will be raised to higher voltages later.

The aggregate installed capacity for the whole of the New South Wales systems and isolated plants was 1,827,741 kW as at 30th June, 1959.

(v) *Future Development.* The major new thermal stations now being developed on the coalfields will become the main base load centres for the northern, southern and western regions respectively. At Vales Point on Lake Macquarie, near Newcastle, work has commenced on a large thermal station with a planned capacity of about 1,000,000 kW. The initial installation will comprise two 200,000 kW generating units. At Wangi, also on Lake Macquarie, four units with a combined capacity of 210,000 kW are operating and work is proceeding to install two further units which will bring the capacity of this station to 330,000 kW.

At Tallawarra on Lake Illawarra, near Wollongong, work on extensions involving the installation of two 100,000 kW generating units is progressing. When completed, the capacity of this station will be 320,000 kW. At Wallerawang, three 30,000 kW units are operating and work is proceeding on the installation of a further three units which will increase the capacity of the station to 240,000 kW.

Hydro-electric stations are being installed at the Warragamba Dam (50,000 kW) in conjunction with the major new source of Sydney's metropolitan water supply and at Keepit Dam (6,000 kW) near Gunnedah.

Development of the 330 kV network to extend from the Snowy Mountains hydro-electric power stations in the south, through the load centres of Wollongong, Sydney and Newcastle, to Armidale in the north is expected to be rapid in the next few years. In addition to the eighty-five miles of 330 kV line between the Snowy Mountains Hydro-electric Authority's Upper Tumut switching station and the Commission's 330 kV substation at Yass, other elements of the 330 kV system totalling 250 miles have already been built and have been placed in service at lower voltages for the present. A further section of this system is to be built between a new 330/132 kV substation immediately south of Sydney and a new 330 kV switching station at Dapto for the connexion of the extensions at Tullawarra Power Station. This work will permit full 330 kV operation of the whole of the link between the Upper Tumut switching station and the new 330 kV substation immediately south of Sydney when the next large Snowy Mountains hydro-electric power station is completed in 1961.

New construction of 132 kV and 66 kV transmission lines will extend the system geographically within the next next two years to South Grafton in the north, Burren Junction in the north-west and Hay and Cobarr in the west. The mileage of these and other lines of this voltage to be built within this period exceeds 400 miles.

(vi) *Hydro-electricity.* The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains Area (*see* Snowy Mountains Hydro-electric Scheme, p. 216). Apart from this area, there are in operation the new hydro-electric station at the Hume Dam (50,000 kW), the 20,000 kW station at the Burrinjuck Dam, and the 7,500 kW station at the Wyangala Dam. The output of all these stations is dependent on the release of water for irrigation.

Of the remaining hydro installations, the largest is that of the New England County Council on the Oakey River, a tributary of the Macleay River, which has a capacity of 5,250 kW.

The Northern Rivers County Council operates a hydro-electric power station on the Nymboida River, a tributary of the Clarence River. This station has a capacity of 4,650 kW.

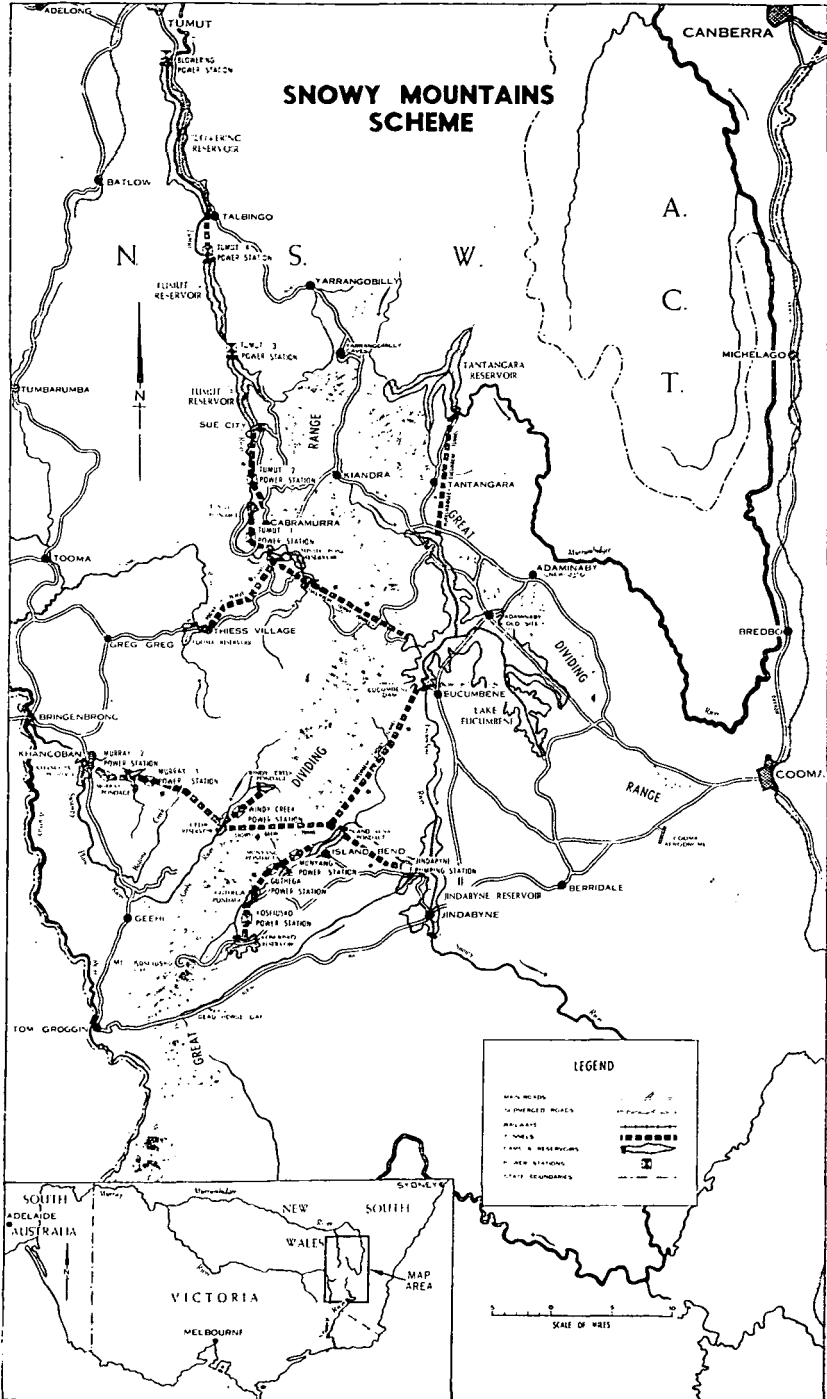

The Bega Valley County Council has constructed a hydro-electric scheme at Brown Mountain utilizing the headwaters of the Bemboka River. This installation has a capacity of 3,950 kW.

The Mullumbimby Municipal Council has in operation two 150 kW hydro units on Wilson's Creek, a tributary of the Richmond River.

4. Rural Electrification.—When The Electricity Authority of New South Wales was constituted in 1946, one of its first tasks was the devising of a scheme for subsidizing the cost of rural electrification. At that time, only 16,000 New South Wales farms were being served with electricity—less than one-quarter of those within reasonable reach of public electricity supply systems. In August, 1946, a subsidy scheme was approved by the Government and put into immediate operation. Under this scheme, local electricity suppliers receive subsidies from the Electricity Authority towards the cost of new rural lines. The amount of subsidy is based on the estimated cost of the proposed extension and the number of consumers able to be served by the new lines. In order that the funds available for subsidy purposes might be used to the best possible advantage, the scheme was designed to encourage local electricity supply authorities to construct the more economic extensions first. This was achieved by fixing a limit to the cost eligible for subsidy. Originally this limit was £250 per consumer when averaged over the cost of the whole extension but the limit was raised to £400 in December, 1953. Some subsidy was paid on higher cost extensions but the excess over an average of £400 was not subsidized.

To assist supply authorities in extending supply to less populated, and thus high-cost, areas of the State, the subsidy scheme has been extended (from May, 1959) to provide for payment of increased subsidy in respect of extensions where the average capital cost per consumer lies within the range of £600–£800.

Between August, 1946, and October, 1959, about 33,500 miles of new distribution lines in rural areas were erected at a cost of over £22,500,000. These lines served 43,000 farms and 27,300 other rural consumers. During the same period, the percentage of farms connected had been raised from 22 per cent. to 82 per cent. At 31st October, 1959, the Electricity Authority was committed to the payment of £10,059,464 in subsidies, of which £4,302,907 had actually been paid.

§ 2. Victoria.

1. *General.*—In Official Year Book No. 39, a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in those cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

2. *State Electricity Commission of Victoria.*—(i) *Power and Fuel Authority.* Since it began operating in 1919, the State Electricity Commission has expanded and co-ordinated the production and supply of electricity on a State-wide basis to the point where its system now generates almost all the electricity produced in Victoria and serves about 97 per cent. of the population through a supply net-work covering more than two-thirds of the populated area of the State.

Development of Victoria's State electricity system is based on the utilization for both power and fuel of Victoria's extensive brown coal resources in the Latrobe Valley in eastern Gippsland, with supplementary development of the hydro-electric potential of north-eastern Victoria. Victoria shares with New South Wales in the electricity generated at Hume hydro station on the River Murray. Victoria is also entitled to one-third of the electricity from the Snowy Mountains Hydro-electric Scheme, after the Commonwealth has taken the power it needs for the Australian Capital Territory and within the Snowy Mountains area. Output from the Snowy scheme was made available to Victoria in the latter half of 1959. Two-thirds of the State's electricity is generated from brown coal, either used in its raw state or manufactured into higher quality fuel in the form of brown coal briquettes. Ninety-eight per cent. of the brown coal and all the briquette fuel are supplied by undertakings which the Commission itself owns and operates. Output of brown coal in 1958–59 from the three open cuts at Yallourn, Yallourn North and Morwell totalled 11,500,864 tons, of which 8,302,571 tons were used in the Commission's own power stations, and 2,458,048 tons were manufactured into 642,590 tons of brown coal briquettes, 17 per cent. of the briquette output then being used for electricity production in metropolitan and provincial steam power stations.

The two functions, generation of electricity and production of fuel, are closely integrated. Apart from the large proportion of brown coal and briquette fuel directly consumed in the power stations, the actual process of briquette manufacture results also in large-scale generation of electricity, since the steam needed for processing the raw coal in the briquette factory is first used to operate turbo-generators in associated power plant which functions as part of the briquette works.

(ii) *Status and Powers.* Constituted by Act of the Victorian Parliament, the State Electricity Commission is a semi-governmental authority administered since 1921 by a full-time Chairman and three part-time Commissioners. The principal duty of the Commission is to co-ordinate and extend on an economic basis the supply of electricity throughout Victoria. For this purpose, it is vested with power to erect, own and operate power stations and other electrical plant and installations, supply electricity retail to individual consumers or in bulk to any corporation or public institution, acquire and operate electricity undertakings, develop, own and operate brown coal open cuts and briquetting works, and develop the State's hydro-electric resources. From its own revenues, which it controls, the Commission must meet all expenditure in the operation of its power, fuel and subsidiary undertakings, and all interest and other charges incurred in the service of its loans and other capital commitments.

The Commission is the controlling authority for all electrical undertakings in Victoria. It is responsible for the registration of electrical contractors, the licensing of electrical mechanics, the control of installation methods and material and the testing and approval of electrical equipment and appliances. Incidental to its main operations, the Commission owns and operates the tramway systems in Ballarat and Bendigo. For the accommodation of its employees at Yallourn, the Commission owns and administers the town of Yallourn and owns large housing estates in the surrounding area. In the Kiewa hydro-electric works area, it has built the two townships of Mount Beauty and Bogong, municipal administration of the former now being vested in the Shire of Bright.

(iii) *Electricity Supply.* At 30th June, 1959, consumers in Victoria served by the State system totalled 831,068. Outside the State system, there were 21,220 other consumers served by local country undertakings. The system supplies all the Melbourne metropolitan area and nearly 1,500 other centres of population.

The Commission sells electricity retail in all areas except part of the metropolitan area, where it sells in bulk to eleven municipal undertakings which operate as local retail supply authorities under franchises granted before the Commission was established. Bulk supply is also being provided at present to several New South Wales municipalities and irrigation settlements bordering the River Murray. Rural electrification is now about 86 per cent. completed, the over-all plan to extend the State system to all populated regions of Victoria having made rapid progress during recent years. Consumers served by the State system outside Melbourne metropolitan area (347,191) have more than doubled, and the number of farms connected to supply (41,748) has almost trebled in the past 10 years. Of the new consumers connected to supply each year, over three-quarters are outside the metropolitan area. New farm connexions average about 3,000 a year.

The Commission's retail consumers totalled 649,704 at 30th June, 1959. Retail supply is administered through the metropolitan branch, seven extra-metropolitan branches (namely Ballarat, Eastern Metropolitan, Geelong, Gippsland, Midland, North Eastern and South Western) and the North Western Region, which comprises Bendigo branch and the two sub-branches based on Mildura and Horsham (Wimmera). At 30th June, 1959, there were branch and district supply offices in 79 towns in Victoria.

(iv) *Electricity Production.* Electricity generated in the State system totalled 5,534 million kWh in 1958-59 or 99 per cent. of all the electricity generated in Victoria. The system comprises 21 steam, hydro and internal combustion power stations within Victoria. Inclusive of generator capacity available to the Victorian system from outside the State, the total installed generator capacity at 30th June, 1959, was 1,319,000 kW. Nineteen of these power stations, totalling 1,294,000 kW are interconnected, and feed electricity into a common pool for general supply. The major power station in this interconnected system is the brown coal burning power station at Yallourn, which alone generates nearly half of Victoria's electricity. Other power stations in the interconnected system comprise the new brown coal burning power station at Morwell, steam stations in Melbourne (Newport, Richmond and Spencer-street), Geelong (two stations) and Ballarat (two stations); hydro-electric stations at Kiewa (two stations) and Eildon, and on the Rubicon and Royston Rivers (four stations), near Eildon; and three internal combustion stations at Shepparton, Warrnambool and Hamilton (Hamilton power station was closed down on 31st July, 1959). All are Commission owned, except Spencer-street power station, which remains the property of the Melbourne City Council, although operated as a unit in the interconnected system. Also linked with the Victorian interconnected system is the hydro station at Hume dam on the River Murray. This power station is operated by the Electricity Commission of New South Wales. Output and operating costs are shared by Victoria and New South Wales.

In meeting the total demand on the system, which fluctuates throughout the day and from month to month, each group of stations in the interconnected system, whether steam, hydro or internal combustion, is assigned a predetermined function dependent upon the availability of power from each group and the over-all economics of generation. The various stations are utilized in the combination that will meet the system load most economically at a given time. This procedure results in an arrangement of the system on the following general lines:—

- (a) Yallourn power station, owing to the low cost of extraction and ample supply of raw brown coal, is a base load station, and is operated continuously at its maximum economic capacity. The new Morwell power station, which like Yallourn, burns raw brown coal, is also a base-load power station.
- (b) Metropolitan and provincial steam stations and provincial internal combustion stations situated close to load centres are designed to operate as peak load stations to assist in meeting the heavy, short period load. Pending the completion of extensions to Yallourn power station, a substantial proportion of the base load on the system is carried by Newport power station.
- (c) Hydro stations are operated in accordance with the availability of water. Their primary function is to provide peak load power. As the basic purpose of Eildon reservoir is to provide water for irrigation, generation of electricity is mainly governed by irrigation requirements, but provision has been made for limited operation of the power station in winter when electricity requirements are at their heaviest and there is no irrigation demand for

water. Hume hydro station also operates on water released for irrigation and no regular output of electricity can be expected during the non-irrigation months in the winter.

Commission power stations not yet connected with the rest of the State system comprise the two steam stations (Redcliffs and Mildura) serving the Mildura region.

(v) *Transmission and Distribution.* The electrical transmission and distribution system in the State supply network at 30th June, 1959, comprised 29,803 miles of power lines, 14 terminal receiving stations and almost 21,000 distribution sub-stations. Main transmission is by 220 kV, 132 kV and 66kV power lines which supply the principal distribution centres and also provide interconnexion between the power stations. The 330 kV line connecting the Victorian system with the Snowy Mountains Scheme via Dederang, near Kiewa, was still under construction at 30th June, 1959—for completion later in 1959. The 220 kV system now extends from Yallourn to Melbourne, Melbourne to Kiewa and Kiewa to Shepparton. Two further sections of the 220 kV system—Melbourne to Colac and Shepparton to Bendigo—are operating temporarily at 66 kV. From Yallourn there are also 132 kV transmission lines to Melbourne. The 66 kV lines radiate from Melbourne to Geelong and main centres in the South West, Ballarat and Horsham, and Bendigo and Charlton, and also to Benalla and other main centres in the North East. Further 66 kV lines radiate from Yallourn to main centres in Gippsland.

(vi) *Future Development.* In conformity with its dual responsibility for producing and supplying Victoria's electricity and producing a large proportion of the State's solid fuel, the Commission's developmental programme is in two parts, which are, however, closely dependent one upon the other. The major part of this programme is for the development of the brown coal undertakings at Yallourn and Morwell in the Latrobe Valley and the erection of a large new brown coal burning power station (Hazelwood) near Morwell; and the second and lesser part for the development of the hydro undertaking at Kiewa. At the same time, the Commission will continue its programme of rural electrification, extension of the State system (particularly in western and north western Victoria) and reinforcement of supply by extending the 220 kV system from Bendigo north-westwards to Kerang and Redcliffs, near Mildura, and also to Ballarat and Geelong where connexion will be made with the existing Melbourne-Colac line, thus completing a 220 kV circle around Central Victoria.

Yallourn power station is being greatly enlarged. Four 50,000 kW generators in two extensions have been added recently. A third extension of 240,000 kW capacity is due for completion in 1962. Enlargement of the power station will require a corresponding expansion in production of brown coal at Yallourn. New dredger plant will increase annual output at the Yallourn open cut to over 12 million tons in 1962. This will complete the Yallourn power generation development, except for the eventual replacement of 175,000 kW of old plant probably with one generating unit of about 200,000 kW capacity.

At Morwell, six miles from Yallourn, the Commission is developing a second brown coal power and fuel project. The new project comprises a large brown coal open cut and a major new power station operating in association with a large new briquetting plant. Some of the electricity generated at Morwell is needed to operate the briquette works, but most of the output of the power station is transmitted through Yallourn to metropolitan terminal stations for general supply through the State network. The power station began operation at the end of 1958. Output for general supply will increase progressively to 151,000 kW in 1963. Briquette production is scheduled to start in the latter part of 1959. It will increase to 1,500,000 tons a year in 1961. Annual output of brown coal at the Morwell open cut will increase progressively to over six million tons over the same period, and will be further expanded in subsequent years to an ultimate annual output of about 19 million tons to meet the fuel requirements of the new Hazelwood power station, proposals for which were submitted to the Victorian Parliament in the latter months of 1959. Hazelwood power station is designed for an ultimate capacity (in about 1970) of 1,200,000 kilowatts in units of 200,000 kW each, the first to be in service not later than 1964. The power station will be located south of Morwell, and brown coal fuel will be supplied by belt conveyor direct from the Morwell open cut.

(vii) *Hydro electricity.* At the Kiewa hydro-electric undertaking, where two stations, totalling 87,600 kW capacity, are now in service, work is in progress on a third power station of 96,000 kW capacity, which is due to have the first two of its six generators operating

before the middle of 1960 and alternators in service in 1961. Work was completed in 1959 on the construction of Rocky Valley Reservoir, which is designed to provide the main high level storage for the operation of the Kiewa power stations.

3. **Local Country Electricity Undertakings.**—At 30th June, 1959, there were 34 independent electricity undertakings in country centres in Victoria generating and distributing their own local supply. Most of these undertakings were in the far south west, west and north west of the State. Under the State Electricity Commission's rural electrification programme, almost all the independent local country undertakings will ultimately be acquired and absorbed into the State system. For the year 1958–59, the total production of the independent undertakings was 44 million kWh. The number of consumers at 30th June, 1959, was 21,220. The operation of the independent undertakings is governed by the Electric Light and Power Act, 1958, which the State Electricity Commission administers.

§ 3. Queensland.

1. **General.** In Official Year Book No. 39, an account is given of the growth of electricity generation in Queensland, with particular reference to the City Electric Light Co. Ltd. of Brisbane (now the Southern Electric Authority of Queensland), the Brisbane City Council and the Toowoomba Electric Light and Power Co. Ltd.

The first of these organizations supplies a large part of Brisbane's electric power requirements, and those of a considerable rural area in the south-eastern corner of the State, from a modern power station at Bulimba, a suburb of Brisbane. Capacity is 95,000 kW at Bulimba "A", plus 10,000 kW, "packaged plant" at Abermain (near Ipswich), 120,000 kW at Bulimba "B" and 120,000 kW at Tennyson. The output from a 3,200 kW hydro-electric unit installed at Somerset Dam near Brisbane is fed into the Southern Electric Authority system. With these plants, 723 million kWh were generated in 1957–58 while the total number of the Authority's consumers at 30th June, 1958, was 113,483.

The Brisbane City Council's electrical undertaking and power production in 1957–58 had an installed capacity of 160,000 kW plus a 10,000 kW "packaged plant" erected at Tennyson, units purchased and generated amounted to 608 million kWh, and there were 128,846 consumers connected.

The Toowoomba Electric Light and Power Co. Ltd., which commenced operations in 1905, has now been absorbed by the Southern Electric Authority of Queensland.

The generation and distribution of electric power in Queensland had, until the last decade, tended to lag behind developments in this field in other States of Australia. The comparatively slow growth in the production and consumption of electricity can be attributed to some extent to the absence, prior to 1938, of a central statutory authority constituted to undertake the functions of co-ordinating, unifying and controlling the production and transmission of electric power. In addition, Queensland's vast area, coupled with a low population density, made large-scale rural electrification, elsewhere than in the south-eastern portion of the State, which surrounds the major centres of industry and population, an uneconomic proposition.

Before establishment of the Regional Electricity Boards in 1945, no attempts had been made to unify or co-ordinate electricity supplies outside of south-eastern Queensland, and rural electrification, apart from reticulation within certain townships, was practically unknown.

2. **Royal Commission on Generation and Distribution of Electric Power in Queensland, 1936.**—On 5th December, 1935, the Queensland Government appointed a Royal Commission to inquire into and make recommendations on matters relating to the generation and distribution of electric power in Queensland. An account of the results of its investigations and of the alternative proposals put before it will be found on page 1182 of Official Year Book No. 39.

3. **The State Electricity Commission of Queensland.**—The State Electricity Commission of Queensland commenced to function during January, 1938. Its main powers were to secure a proper and efficient supply of electric power, review tariffs, grant licences to supply electricity, secure the safety of the public, and control and advise electrical undertakings generally. It was thus a controlling authority as distinct from an operating authority. Details of its growth and development may be found in earlier issues of the *Official Year Book* (see No. 44, p. 284). Since its inception, the Commission has made considerable progress in its task of developing the State's power resources and promoting a more widespread use of electric power. The degree of utilization of electrical energy in Queensland now compares favourably with other States in the Commonwealth.

4. **Regional Electricity Boards.**—With a view to facilitating the control and development of electricity supply in areas of low population density and those having a predominantly primary producing economy, the Government, in 1945, passed the Regional Electric Authorities Act providing for the creation of regions of electricity supply and the constitution of Regional Electricity Boards.

Soon after passage of the Act, four Regional Boards were constituted, namely, Wide Bay, Capricornia, Townsville and Cairns. A fifth Board, entitled South Burnett, became an operating authority in October, 1947, but on 1st July, 1951, was absorbed in the Wide Bay Regional Board and this organization is now known as the Wide Bay-Burnett Regional Electricity Board.

As from 1st March, 1957, a further Regional Board became operative, covering the areas of Mackay, Sarina, Proserpine and adjacent rural areas under the name of Mackay Regional Electricity Board.

Supply throughout this Region is provided from the central generating station at Mackay and accelerated electrical development of this area is being undertaken. The Townsville Regional Electricity Board's area was extended in July, 1957, to include that of the Bowen electricity undertaking. The local authority areas of Thursday Island and Cook were included in the Cairns Regional Electricity Board's area from 1st July, 1956, and 1st July, 1957, respectively. As from 1st January, 1958, the Capricornia Region was extended to include the Shires of Bauhinia, Belyando, Emerald and Peak Downs in Central-West Queensland.

Activities of the original four Regional Boards in 1957–58 and 1958–59 compared with operations of the stations located in regions in 1945–46, and totals for Queensland as a whole are shown in the following table:—

QUEENSLAND: REGIONAL OPERATIONS.

Region.	1945–46.		1957–58.		1958–59.	
	Units Generated.	No. of Consumers.	Units Generated.	No. of Consumers.	Units Generated.	No. of Consumers.
	Million kWh		Million kWh		Million kWh	
Wide Bay-Burnett	13.7	11,467	79.0	28,003	81.2	29,513
Capricornia	19.5	11,196	128.8	21,743	146.9	22,417
Townsville	25.8	11,612	(a) 97.1	25,812	(a) 99.7	26,929
Cairns	22.7	9,722	150.5	19,930	174.8	21,088
<i>Total</i> ¹	<i>81.7</i>	<i>43,997</i>	<i>455.4</i>	<i>95,488</i>	<i>502.6</i>	<i>99,947</i>
Total Queensland ..	487.0	194,429	1,852.4	365,048	b 2,019.1	b 380,500

(a) Excludes 28 m.kWh purchased from Tully Falls power station in 1957–58 and 49 m.kWh in 1958–59.

(b) Estimated.

Generator capacity of the five existing Regional Boards installed at 30th June, 1959, was:—Wide Bay-Burnett, 37,500 kW; Capricornia, 54,743 kW; Townsville, 40,646 kW; Mackay, 12,500 kW; Cairns, 91,080 kW; total 236,469 kW.

5. Creation of Southern Electric Authority of Queensland.—A further major step in electrical progress, comparable with that taken when the agreements with the City Electric Light Co. Ltd. and Toowoomba Electric Light and Power Co. Ltd. were first entered into, was taken by the passing of the Southern Electric Authority of Queensland Act of 1952. This Act constituted the City Electric Light Co. Ltd. as a public authority to be known as the Southern Electric Authority of Queensland.

Two Government representatives are included on the Board of the new Authority, whose establishment prepares the way for the complete amalgamation, in due course, of the electrical undertakings serving the south-eastern Queensland area of supply.

As from 1st July, 1954, the Southern Electric Authority acquired the Toowoomba Electric Light and Power Co. Ltd., thus bringing this company's area of supply under its control. The Southern Electric Authority is now responsible for the electrical supply and development of a consolidated area of 19,386 square miles.

6. Hydro-electricity.—Behind the costal plain of the Cairns-Ingham area is an extensive plateau, the elevation ranging from 2,000 to 3,000 feet, although isolated peaks exceed 4,000 feet. The short coastal streams which rise on the plateau descend rapidly into deep gorges, which they have cut through the divide. With heavy monsoonal rainfall on their catchments and concentrated fall, these streams represent a considerable potential source of power, but storage, which can be provided in most cases, is essential to control the very variable flow.

There is a pronounced wet season from December to March, with a dry season from July to November. Average annual rainfall varies greatly with geographic location, being 178 inches at Deeral (midway between Cairns and Innisfail) but only 34 inches at Cashmere (120 miles south-west of Innisfail).

In 1935, a small hydro-electric power station was placed in service at Barron Falls, ten miles north-west of Cairns. The station comprises three 2,000 h.p. turbines, each driving a 1,320 kW generator, and with a hydraulic head of 410 feet. An output of 25 million kWh was attained during 1958–59, the station operating essentially as a run-of-river station without any significant water storage capacity being available. Power is fed at 22 kV into the main network at Mareeba and Cairns.

The hydro-electric power scheme at Tully Falls was commissioned in September, 1957, with an initial plant installation of 36,000 kW. Work has now been completed on the installation of a further two 18,000 kW sets, making a total installation of 72,000 kW. An output of 135 million kWh was obtained from this station during 1958–59. Water controlled by Koombooloomba Dam at present under construction on the upper Tully River is diverted, a short distance above Tully Falls, through a tunnel and steel penstocks to an underground power station in the gorge at the foot of the falls operating with Pelton driven generators under a head of 1,485 feet. Power is transmitted to the load centres at Cairns and Innisfail by means of 132 kV transmission lines. Future automatic power plants upstream and downstream from Tully Falls consisting of two 7,500 kW sets under 405 feet head and one 5,400 kW set under 230 feet head are under consideration. The combined peak load for the three plants would then be 69,000 kW. Interconnexion of the Tully scheme with the Townsville area, which is also being served by a thermal station, was completed in February, 1958, by the provision of a 160 mile double circuit 132 kV transmission line. On present estimates, power from the completed Tully scheme will be sufficient to supply the inter-connected area until 1963 when additional power will be required.

The construction of a new peak load power station at Barron Falls to provide a firm (dry year) output of 60,000 kW at 25 per cent. load factor (i.e. firm output of 131 million kWh per annum) has been authorized by the Queensland Government. Orders have been placed for the major items of plant and construction of the scheme has commenced. This scheme will ensure an adequate supply of power to the Cairns and Townsville areas until 1967.

The completed scheme will provide for an underground power station below the Barron Falls containing two 30,000 kW Francis turbines, operating under a head of 920 feet. Water will be carried from a pond above the Falls by horizontal tunnel and pressure tunnel to the power house. The existing weir will be raised by 8 to 16 feet for this purpose. An earth and rock fill dam will be built on Flaggy Creek, a tributary of the Barron, to provide storage capacity for the scheme, although initially spare storage capacity at the Tinaroo Falls Dam will be used.

Other major schemes which are currently being investigated include North Johnstone-Russell Rivers (32,000 kW); Beatrice-North Johnstone Rivers (9,000 kW); South Johnstone River (25,000 kW); Herbert River (90,000 kW).

In the Townsville Region, the Commission, acting on behalf of the Burdekin River Authority, investigated the proposed hydro-electric development of the Burdekin. The Scheme envisaged a power plant immediately below the Burdekin Falls Dam to operate under an average head of 225 feet.

In relation to other projects, the Scheme is not as favourable economically as a power production project alone but, as a joint power production, irrigation and flood mitigation scheme, it has considerable potentialities. An estimated output of 80,000 kW at 50 per cent. load factor would be available.

The State Electricity Commission, in conjunction with other Government Departments is carrying out an extensive investigation into the development of hydro-electric resources. It is estimated that full development of the hydro-electric potential of North Queensland would provide the equivalent of over 300,000 kW of power at 50 per cent. load factor or approximately 1,300 million kWh a year.

A number of small hydro-electric projects are being investigated in other parts of the State. On the Broken River near Eungella (50 miles west of Mackay), a site exists for the establishment of a peak load hydro-electric power station, and this is being examined. The construction, in the future, of a major dam on the Dawson River at Nathan Gorge (near Cracow) in the Capricornia Region for irrigation purposes, would permit the installation of a small hydro-electric power station at this site if the power produced could be economically absorbed. A plant of 3,200 kW capacity has been installed to utilize the outflow from Somerset dam on the Stanley River a few miles above its confluence with the Brisbane River.

7. New Capacity.—(i) *Regions.* To provide for development of the electric power resources in the regions, the State Electricity Commission formulated a ten-year programme divided into two five-year periods. In the first, it was planned to erect main transmission systems to connect existing power stations located within the regions and supplement generating capacity by the construction of new stations. Work on this section of the plan in the original Regional Board areas is now virtually complete. In the second, the transmission system will be extended to more sparsely settled areas, the ultimate purpose being the provision of "ring" transmission lines throughout each region and inter-connection between the regions.

A number of new generating stations have been commissioned as follows:—Wide Bay (Burnett Region), of which 15,000 kW was placed in service during September, 1951, and 7,500 kW in 1954, while a further set of 15,000 kW was installed in 1957. Rockhampton (Capricornia Region) of which 22,500 kW was placed in service during September, 1952, and a further 15,000 kW in May, 1956, and a further 15,000 kW in December, 1958; and Townsville (Townsville Region) of which 22,500 kW was commissioned in July, 1953, and a further 15,000 kW in January, 1956. Each of these stations will have an ultimate installed capacity of 52,500 kW and be steam-operated. In the Cairns Region, the Tully Falls hydro-electric power station has been completed with 72,000 kW installed capacity.

The Tully Falls scheme (*see* para 6, p. 230) was planned to link with the Townsville Regional Electricity Board's system for the purpose of marginal supply, and construction of this interconnection was completed by the close of 1957. Preliminary work has commenced on the construction of a further hydro-electric scheme on the Barron River which should be completed by June, 1963, and will add 60,000 kW to the available hydro-electric generation capacity in the area. The first stage of the scheme's development is estimated to cost £5,850,000, and initially full use will be made of available storage capacity at Tinaroo Falls Dam, thus enabling construction of a £5,000,000 storage dam on Flaggy Creek to be postponed for a number of years.

At Mackay, where supply was first given in 1924, a Regional Electricity Board has now been constituted and a 66 kV transmission line to Proserpine has been erected. The generating capacity of the station under the control of this Regional Board is 12,500 kW, and a further 3,000 kW of diesel plant is being installed. At Bowen, the Town Council, which established the service in 1952, has now transferred control of its area to the Townsville Regional Electricity Board, and transmitted supply is provided by a 66 kV transmission line. During 1935, a small (3,800 kW) power house—Australia's first underground hydro station—was placed in service at Barron Falls near Cairns. When the Cairns Regional Board was established during 1946, operation of the station passed to the Board's control and now comprises part of its generating plant.

(ii) *Western Queensland.* In western Queensland, where a number of small isolated generating stations supply power to some of the larger towns, the Commission has evolved a plan to increase and modernize existing capacity. It involves installation of small internal combustion units ranging in size from 100 kW to 600 kW according to the load likely to be experienced, and conversion from direct to alternating current supply. The Government has assisted the scheme by subsidy—a feature of electrical development in Queensland. Assistance provided for regional electrical development comprises subsidies of up to one-third of capital cost on annual loan charges, with special subsidies of up to 50 per cent. for authorities in the larger towns outside the Regions.

In addition to improving supplies to the larger western towns, a scheme has been devised for electricity supplies for smaller towns in the western districts, where consumers range from 50 to 200. Subsidies of 65 and 60 per cent. will apply in those cases where the number of consumers supplied is less than 100 and 200, respectively. This plan has now been virtually implemented and at 30th June, 1958, 28 townships in western Queensland had been provided with electricity. The power is being supplied by small oil driven generating sets with automatic controls which can be run with a minimum of operating attendance. In addition, investigations of the possibility of supply have been carried out at a number of other small centres.

Coal-burning gas producers have been successfully commissioned for public electricity supply purposes at Longreach, Clermont, Dalby, Blackall and Barcaldine and further extension of their use in western Queensland is predicted, as lower tariffs and more efficient production of electricity should follow their use.

(iii) *South-eastern Queensland.* To increase the availability of electric power in the south-eastern area of the State, the two major generating authorities, in conjunction with the Commission, have power station projects under construction which are designed to place in service, by 1968, new generating units totalling 400,000 kW. The Southern Electricity Authority is continuing the development of the station known as Bulimba "B" on a site adjacent to Bulimba "A". 120,000 kW had been installed to 30th June, 1959, and the ultimate capacity may reach 180,000 kW. At Tennyson in the Brisbane area, the Brisbane City Council has constructed a new power station with an initial capacity of 60,000 kW which ultimately may be increased to 180,000 kW. At 30th June, 1959, generating plant of 120,000 kW was in service at this new station. To supplement capacity pending operation of these projects, "packaged" generating units totalling 20,000 kW were obtained from overseas and commissioned early in 1953, one 10,000 kW set having been installed at Tennyson and another 10,000 kW set at Abermain near Ipswich.

The power stations of the two major generating authorities at New Farm and Bulimba are interconnected at 33 kV.

§ 4. South Australia.

1. *General.*—An account referring to the companies generating electric power in South Australia prior to the establishment of the Adelaide Electric Supply Co. Ltd., and describing the development of that company's activities, was given in Official Year Book No. 39. Also included in the account was some reference to the early measures of public control over electricity supply in South Australia and the extent to which they were applied, and also to the inquiries into the activities of the Adelaide Electric Supply Co. Ltd. in 1932 and 1935.

Following upon an inquiry instituted by the Government in 1943, relative to measures for increasing electricity supply to the metropolitan area and country districts, the Electricity Act 1943 was passed which, *inter alia*, established the South Australian Electricity Commission. However, until the State assumed full responsibility for the supply of electric power, this body was not able to do much more than exercise the formal functions conferred on it by the Act.

2. *The Electricity Trust of South Australia.*—Early in 1946, legislation was passed transferring the assets of the Adelaide Electric Supply Co. Ltd. to the newly formed public authority, the Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supplies. This legislation

provided that the Trust should take over the powers vested in the South Australian Electricity Commission under the 1943 Act, which, after establishment of the Trust, would cease to exist. In addition to the powers specified in the Adelaide Electric Supply Company's Acts 1897-1931, the Trust may, *inter alia*, supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other persons who generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other persons, and give or receive supplies of electricity in bulk.

3. Capacity and Production.—There are three main categories of organizations generating electric power in South Australia, namely:—(a) Governmental, which include the Electricity Trust; (b) Local Authorities, e.g., municipal and district councils, and Renmark Irrigation Trust; and (c) Other, including individuals and firms primarily engaged in generating power for sale, firms generating power primarily for their own use but supplying outside consumers, and firms generating power solely for their own use.

In 1957-58, total installed capacity in South Australia was 402,386 kW, an increase of 48,556 kW on the year before. The units generated totalled 1,580 million kWh compared with 1,315 million kWh in the previous year.

Of the total installed capacity, the Electricity Trust of South Australia operated plant with a capacity of 365,600 kW. It is thus the most important authority supplying electricity in the State. There were approximately 264,000 ultimate consumers of electricity, of whom 238,362 were supplied directly by the Trust and approximately 11,000 supplied indirectly by the Trust (i.e. through bulk supply). Its major steam stations were Osborne "A" (70,000 kW), Osborne "B" (180,000 kW) and Port Augusta "A" (90,000 kW) while the balance of the capacity controlled consists of house sets and regional stations at Port Lincoln and Mount Gambier.

No hydro-electric potential exists in South Australia. Steam generating units comprise 95 per cent. of installed capacity and the balance is internal combustion equipment. Until recently, all fuel consumed in the thermal stations was obtained from sources outside the State, and at times power restrictions were necessary owing to the inadequacy of supplies.

4. Leigh Creek and other New Capacity.—With a view to reducing the dependence on external sources of fuel, steps have been taken to produce local coal and to install plant to use it. Fairly extensive deposits of low-grade sub-bituminous coal are obtainable at Leigh Creek, about 360 miles north of Adelaide. Under the Electricity Trust of South Australia Act Amendment Act 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and also for sale to other consumers. Production from the Leigh Creek field commenced in 1944, and in the year ended 30th June, 1958, 687,114 tons of coal were sold. Of this amount, the electricity undertaking used 668,128 tons.

In order to cope with the rapidly increasing demand for power, the Electricity Trust is constructing a second power station at Port Augusta, to be known as Port Augusta "B". This station will have a capacity of 240,000 kW making the combined capacity at Port Augusta 330,000 kW. The first 60,000 kW turbo-alternator is expected to be commissioned about March, 1960, and the station is scheduled for completion about 1964. Leigh Creek coal will be used exclusively. The power station will be interconnected with the metropolitan area by two 275 kV transmission lines. Consideration is now being given to the establishment thereafter of some pumped-storage hydro plant, as being possibly the most economic way of handling the peak loads of the system.

It is possible that an installation of this type of plant would serve the increasing needs of the system until the late 1960's. In addition, at Port Lincoln and Mount Gambier, the Trust operates steam power stations of 5,000 kW and 16,800 kW capacity, respectively, the former burning fuel oil and the latter either wood waste or fuel oil.

§ 5. Western Australia.

1. General.—Electrical undertakings in Perth and Fremantle formerly owned by the Perth City Council, the Western Australian Government Electricity Supply, the Fremantle Municipal Tramways and Electric Lighting Board and other metropolitan, municipal and road board supply authorities have been taken over by the State Electricity Commission of Western Australia. For information on the early history of electricity supply in the metropolitan area, see Official Year Book No. 39, page 1189.

2. **Metropolitan Undertaking.**—Statistics relating to activities of the Metropolitan undertaking are shown in the following comparative table.

WESTERN AUSTRALIA: METROPOLITAN UNDERTAKING.

(Including Bunbury Power Station).

Particulars.	1938-39.	1957-58.	1958-59.
Plant capacity kW	57,000	$\left\{ \begin{array}{l} a \text{ 25,000} \\ b \text{ 160,000} \end{array} \right.$
Maximum load kW	33,000	124,000	133,000
Units generated Million kWh	137	571	605
Fuel used per unit (kWh) generated lb.	2.77	1.55	1.56
Coal used tons	168,722	389,423	414,919

(a) 40 cycles.

(b) 50 cycles.

As a result of a separate inquiry conducted at the same time as the early investigations into the proposed new station at South Fremantle, a recommendation was made favouring conversion of the East Perth 40 cycle system to the British and Australian Standard Frequency of 50 cycles per second. The recommendation was adopted and implemented by making the frequency of generation at South Fremantle 50 cycles and installing at East Perth a frequency changer able to convert 25,000 kW of energy from one frequency to the other.

3. **Kalgoorlie.**—In Kalgoorlie, the Municipal Council supplies approximately 3,800 consumers with either direct or alternating current. A diesel station of 1,825 kW generating capacity provides direct current to the limit of its capacity. Alternating current is purchased from Kalgoorlie Power Corporation and retailed by the Council to some consumers, while portion is passed through a rectifier to convert it to direct current. Primarily established to supply power to the gold mines, the Kalgoorlie Electric Power and Lighting Corporation operates a steam station of 11,000 kW and maintains a 22 kV line of 21 miles to the Celebration mine. Alternating current is also supplied to about 1,400 consumers. The Corporation's undertaking generates approximately 35 million kWh per annum and boilers are fired by Collie coal.

4. **General Pattern of Electricity Supply.**—The pattern of the generation and distribution of electric power in Western Australia consists of a number of isolated systems each supplying a particular area. Except in the metropolitan area and in the area embraced by the South-West Power Scheme (see para. 6 below), where in both cases electricity supply is in the hands of the State Electricity Commission of Western Australia, local authorities are generally responsible for the supply of electricity for domestic and industrial purposes. In the area between the Great Southern Railway from Northam to Albany and the west coast, however, the State Electricity Commission has now constructed transmission lines to give central station supply to the towns and their surrounding rural areas. In addition, there are several mining companies which generate electricity for use in their mines. In order to cater for the expected growth in demand, the capacity of the State's major generating stations is being increased.

The system in the Metropolitan area has been interconnected with the Bunbury area by means of two 132 kV transmission lines.

The main load centre of the State is, of course, the Perth-Fremantle area into which is concentrated the major portion of the State's population and industry. The inter-connexion between the Metropolitan and Country systems is, however, expected to lead to a gradual decentralization of load.

5. **The State Electricity Commission of Western Australia.**—(i) *Origin and Aims.* In order to ensure an organized and co-ordinated future growth of electricity generation and distribution throughout the State, the Government introduced a Bill in 1945 to establish the State Electricity Commission, which, together with an Electricity Bill, became law early in 1946. Under these Acts, the Commission was given power, *inter alia*, to secure the ultimate co-ordination of all State or other electrical undertakings in the State, to construct and operate power stations and transmission lines and purchase as a going concern and carry on the undertaking of any supply authority. Under the Electricity Act, which should be read in conjunction with, and is subject to, the State Electricity Commission Act, no person or organization is permitted to construct or extend an electricity supply undertaking without

consent from the Commission. Local authorities are empowered to operate and construct power stations and other works associated with the supply of electricity, provided that authority is first obtained from the Commission and any proposals are not inconsistent with the Commission's plans.

(ii) *New Projects.* Since its inception in 1946, the Commission has proceeded with the task of increasing generating capacity in an endeavour to cater for a greatly increased demand for power. Long-range plans were formulated to interconnect the south-western portion of the State with the Perth-Fremantle system. One of its most important and immediate problems was to increase the capacity of the generating equipment serving Perth and Fremantle. During the 1939-45 War years, it became evident that the growth of demand for electric power would necessitate provision of additional generating equipment in the metropolitan area as soon as possible. Accordingly, the Government Electricity Supply authority commenced design work for a new station of 50,000 kW capacity. Contracts were let in 1945 and construction commenced on a site selected at South Fremantle. Responsibility for completion of this project was given to the Commission under the Act of 1946. As it was considered that an even larger station would be required, provision was made for the installation of two additional units giving an ultimate capacity of 100,000 kW. Steam is furnished by eight boilers designed to use pulverized coal from Collie, which is located about 120 miles from the station. At the end of 1954, four units had been placed in service and the output was being fed into the metropolitan system.

At the East Perth power station, a new 30,000 kW unit has been commissioned and an additional boiler installed. A 25,000 kW unit, commissioned in 1938 (generating 40 cycles) is also available at this station.

6. South-west Development.—At the request of the Government, the Electricity Advisory Committee, in 1945, submitted a report recommending, amongst other things, that a national power scheme for the south-west be proceeded with. The plan provided for acquisition of the existing Collie power station and installation of additional generating capacity, construction of a power station at Bunbury and interconnexion of the south-west scheme with the metropolitan system. On 12th October, 1946, the State Electricity Commission acquired the Collie power station, which prior to 1946 was owned and operated by the Collie Power Company Limited. At the date of acquisition, the station's installed capacity was 5,000 kW, comprising two steam units. The capacity of the station was increased to 12,500 kW in 1952.

Since 1950, the Commission has acquired a number of electrical undertakings from municipal bodies and private organizations in the south-west area and is proceeding with arrangements for the purchase of others. In August, 1951, the first portion of the South-West Power Scheme was officially opened at Collie and many of the south-west towns have now been connected by transmission line to the Collie Power Station. When completed, a system of power lines will reticulate electricity over an area of approximately 25,000 square miles. The first two 30,000 kW units and associated boilers at Bunbury Power Station have been placed in service. Work is proceeding as programmed on two similar units to give the Station an ultimate capacity of 120,000 kW. The first section was officially declared open on 23rd August, 1957.

Diesel stations of 5,400 kW capacity at Albany serve the towns of Albany, Denmark, and Mount Barker in the extreme south of the State.

§ 6. Tasmania.

1. General.—A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Other factors contributing to the low costs are that rainfall is distributed fairly evenly throughout the year, with comparatively small yearly variations. The cheap power has led to the establishment in Tasmania of several large electro-chemical works with high load factor, and as a consequence the system load factor is also very high (at present 67.3 per cent.).

For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930, see Official Year Book No. 39, pages 1192-3.

2. **The Hydro-Electric Commission.**—(i) *Present System.* In 1929, the Government passed the Hydro-Electric Commission Act, under which was established the Hydro-Electric Commission and which vests in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania and authorizes it to develop and reticulate electric power for all purposes. In 1930, this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department.

The first project undertaken by the Commission was the Shannon Power Development which utilizes 258 feet of the difference in level between the Great Lake (Miena Dam) and Waddamana forebay. A small earthen dam diverts the outflow from the Great Lake through 2½ miles of canal and then by two pipelines to the Shannon power station, where 10,500 kW was added to the system in 1934. After passing through Shannon power station, the water discharges into the Waddamana canals to be used again at the Waddamana power stations.

In 1933, it was decided to proceed with the Tarraleah Power Development. In this scheme, the waters of the River Derwent are picked up near Butler's Gorge by a canal and conveyed 14 miles to the pipeline forebay 982 feet above the power station on the Nive River where three 15,000 kW generators were placed in service in 1938. Shortly afterwards two more 15,000 kW units were added and a sixth machine installed in 1951 brought the total installed capacity at Tarraleah power station to 90,000 kW. Storage is provided at Lake St. Clair and at Lake King William, an artificial lake created by the 200-ft. high Clark Dam across the Derwent at Butler's Gorge. In the Butler's Gorge power station at the foot of the dam, a single 12,200 kW generator was installed in 1951. To increase the security of the system and to permit variable seasonal loading of Tarraleah station, a second canal from Clark Dam to Tarraleah was completed in 1955.

Early in 1939, it was decided to make full use of the Great Lake storage by increasing the peak capacity at Waddamana. War conditions impeded progress, but by 1945 two 12,000 kW generators had been installed in a new power station, Waddamana "B", adjacent to the original station Waddamana "A". A third unit installed in 1946 and a fourth in 1949 brought the total to 48,000 kW. To enable a full peak capacity to be maintained at both Waddamana stations a duplicate of the original Waddamana canal was constructed during 1947-48.

Between 1930 and 1948, the generating capacity of the system was increased by 121,500 kW but the demand for power continued to increase rapidly and it was obvious that a greatly accelerated construction programme would have to be undertaken. Construction of the Tungatinah Power Development was started in 1948 and the Trevallyn Power Development in 1949.

The Tungatinah scheme draws water from three separate catchment areas located on the Central Plateau between the Great Lake (Shannon-Waddamana) and Lake St. Clair (Butler's Gorge-Tarraleah) catchments and control of practically the whole run-off from the Central Plateau has now been effected.

The principal catchment utilized by the Tungatinah scheme is drained by the Nive River. A 120-ft. high dam at Pine Tier diverts the waters of the Nive through 6½ miles of canal system to the first of a chain of four artificial lakes, created by dams constructed across the outlets from natural marshes and linked by large open cuts. From the southernmost lake, a tunnel and then five steel pipelines lead to the five 25,000 kW generators in Tungatinah power station, 1,005 feet below on the Nive River just upstream from Tarraleah station on the opposite bank of the river. Power was first generated at Tungatinah in mid-1953 with a capacity of 125,000 kW. Water from the smaller Clarence River catchment is brought into one of the lakes in the Tungatinah system by means of a woodstave pipeline 5½ miles in length and the third catchment area utilized is the Lake Echo-Dee River catchment. Regulation of this catchment has been achieved by construction of a dam at Lake Echo to provide the main storage reservoir for the Tungatinah scheme, construction of the Lake Echo power station (one 32,400 kW generator) to utilize 568 feet of the difference in level between Lake Echo and Dee Lagoon, and the diversion of water from Dee Lagoon through 2 miles of tunnel to the main Tungatinah system.

The Trevallyn Power Development, the first constructed by the Commission outside the Central Plateau region, was undertaken primarily to meet the requirements of the aluminium industry. The waters of the South Esk River are diverted through 2 miles of

tunnel and pipeline to a power station on the Tamar River near Launceston. Three 20,000 kW generators were installed in mid-1955 and a fourth unit has since brought the total capacity of Trevallyn Power Station to 80,000 kW.

(ii) *New Capacity.* The Hydro-Electric Commission is engaged in a progressive construction programme comprising the completion of the Wayatinah "A" project and the construction of the Catagunya and the Great Lake Power Developments. Since 1948, the generating capacity of the system has been increased by 312,850 kW to a total of 485,350 kW and present construction is planned to bring this total to 917,000 kW by 1966. There will still remain very considerable resources for future development, as it is considered that at least 2,400,000 kW can be economically developed.

The Wayatinah Power Development, now nearing completion, will comprise two power stations and headworks to utilize water which is, in the main, already regulated and which has been used several times. The volume of water available is much larger and the head smaller than in the case of other major stations. All the water which has passed through Tarraleah or Tungatinah stations will be diverted, by a weir across the Nive River below Tarraleah, through 4 miles of tunnel and then steel pipes to Wayatinah "A" power station lower down on the Nive River where 83,700 kW will be installed by 1960.

A dam across the River Derwent, just below its junction with the Nive, has created a small lake into which will flow all the water from Wayatinah "A" plus water collected by the Derwent below Clark Dam. One mile of tunnel and one mile of pipeline will lead the water to Wayatinah "B" power station on the Derwent three-quarters of a mile below its junction with the Florentine River. The lower station, Wayatinah "B", was constructed first and was completed in 1957. Installed capacity is 32,250 kW.

In the Catagunya Power Development, now under construction, a pre-stressed concrete dam on the River Derwent, four miles below Wayatinah "B", will divert the water through a flume and then steel pipes to the Catagunya power station on the left bank of the river about one-third of a mile downstream where 48,000 kW will be installed by 1962.

The Great Lake Power Development, now in the preliminary stages of construction, is the most recent project to be undertaken by the Commission. In this scheme, the water of the Great Lake, by its diversion in the direction of the most precipitous fall, will be used to much greater advantage than at present. Eventually reaching the South Esk River it will be used again through the generators of the Trevallyn Power Station.

The works will consist of an intake at the Great Lake, a four mile headrace tunnel through the Western Tiers, one mile of surface pipeline on the face of the Tiers, a vertical shaft leading to the power station some 500 feet underground, a two and a half mile tailrace tunnel discharging into a canal, thence through a regulating pond into a channel flowing into the Lake River, a tributary of the South Esk River.

In this development, the power will be generated by the fall of water through a vertical distance of 2,750 feet to an underground power station where generators of 300,000 kW capacity will be installed. The station will be known as Poatina Power Station. A further section of the scheme includes the provision of a dam at Arthur Lakes to increase greatly the storage of the system and a pumping station and a conduit discharging into the Great Lake so that water from this catchment will be utilized through the Poatina Power Station.

There is every indication that the demand for power in Tasmania will continue to increase. The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme.

3. Power Usage by Secondary Industry.—The abundant and comparatively cheap supplies of electricity and other natural resources attracted to Tasmania a number of important secondary industries for which energy costs constitute a significant proportion of the total cost of production. Some of the more important organizations and their continuous power demands when plant is operating are as follows:—Electrolytic Zinc Company of Australasia Ltd., 72,735 kW at Risdon and 4,100 kW at Rosebery; Australian Aluminium Production Commission, 34,000 kW; Australian Newsprint Mills Ltd., 20,700 kW; Associated Pulp and Paper Mills Ltd., 14,900 kW; Australian Commonwealth Carbide Company Ltd., 7,800 kW; and Goliath Portland Cement Company Ltd., 3,350 kW.

§ 7. Commonwealth Territories.

1. *Internal Territories.*—(i) *General.* The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek and Alice Springs in the Northern Territory are operated by the Commonwealth Government.

(ii) *Australian Capital Territory.* The supply authority is the Canberra Electric Supply. Supply was first established at Canberra during 1915 and was met from local steam plant. Connexion to the New South Wales interconnected system was effected in 1929, and all requirements are now taken from this system. Total population served with electricity at 30th June, 1959, was 46,000 and the total number of ultimate consumers was 13,753. Average annual rate of increase of demand since 1947–48 has been 14.13 per cent. and the figure for energy was increased by 13.65 per cent.

During the year 1958–59, the bulk electricity purchase was 103,442,000 kWh and the maximum demand incurred was 26,400 kVA.

(iii) *Northern Territory.* At Darwin, supply was established by the Town Council in October, 1934, but later, during April, 1937, responsibility for generation and supply was transferred to the Northern Territory Administration. The power station is equipped with diesel generating plant of 6,770 kW capacity, two new 970 kW diesel sets being installed in 1955–56 and an additional 1,380 kW diesel set during 1957. At Alice Springs, the Power Station is equipped with diesel generating plant of 1,982 kW capacity, two 230 kW diesel sets being installed in 1956–57 and an additional 520 kW diesel set during 1957–58.

At Katherine, the power station is equipped with a small diesel generating plant of 450 kW capacity. The diesel station at Tennant Creek was closed down in 1957, supply for the township being purchased in bulk from Peko Mines No Liability.

The total number of ultimate consumers served in the Territory was 4,238 in 1958–59.

In 1956–57, the Department of Works selected a site on the water front of Darwin for a 15,000 kW steam driven generating set. This steam station is being designed to supply Darwin and suburbs when the present diesel station has reached its maximum economical capacity. Construction work has been undertaken on preparation of the site and is planned to be completed during 1959–60.

2. *External Territories—Papua and New Guinea.*—Responsibility for the operation and establishment of the electrical undertakings in Papua and New Guinea is vested in the Administration of the Territory of Papua and New Guinea, whose headquarters are located at Port Moresby. The total generating capacity of the diesel engine driven generating sets amounts to 6,389 kW and of the hydro operated sets 3,230 kW. The generating capacity of the power plants at the main centres is—Port Moresby, diesel 2,303 kW, hydro, 3,000 kW; Rabaul, 1,300 kW; Lae, 1,286 kW; Madang, 410 kW; Samarai, 300 kW; Kavieng, 114 kW; Wewak, 150 kW; Lorengau, 76 kW; Goroka, hydro, 200 kW; Aiyura, hydro, 30 kW; and 450 kW distributed among outstations where generating capacity is between 5 kW and 60 kW. The townships of Wau and Bulolo are still supplied by the Bulolo Gold Dredging Co., which operates a hydro-electric plant of 5,500 kW. This power is produced mainly to supply alluvial dredges and, in addition, now supplies power to the plywood mill at Bulolo.

The number of ultimate consumers served was 3,584 in 1955–56, 4,258 in 1956–57, 4,755 in 1957–58 and 5,329 in 1958–59.

Vast hydro-electric potential exists in New Guinea and it has been estimated at 15,000,000 kW, but because of the island's location, absence of large load centres and lack of industrialization, only a small proportion could, at present, be economically developed.

In 1950, the Commonwealth Government joined with the British Aluminium Co. Ltd. of London to locate and develop large capacity hydro-electric schemes in New Guinea. A new company was formed, known as New Guinea Resources Prospecting Co. Ltd., with a capital of £100,000. The Commonwealth Government held 51 per cent. of the shares and had a controlling interest on the board of five members. It was recently announced that the Commonwealth Government had sold its interest to a company which has been formed by Consolidated Zinc Pty. Ltd., and the British Aluminium Co. Ltd. both of London. This company is continuing investigations into the hydro-electric potential with the object of treating bauxite, which is to be mined in the Gulf of Carpentaria.

The following hydro-electric schemes are now in operation: Port Moresby—at Rouna on the Laloki River, generating sets have been established with an initial capacity of 3,000 kW, with provision for expansion to 5,500 kW as stage 2, and to 17,500 kW as stage 3. The power station came into operation in January, 1957. The present project utilizes only portion of the power available from the Laloki River and the economic ultimate development will be of the order of 40,000 kW. At Aiyura, a 30 kW hydro-electric station for the Agricultural Experimental Station, was brought into operation in August, 1956.

At Goroka, two 100 kW hydro-sets are now in operation and a 200 kW set is on order. Investigations are now being carried out to ascertain the possibility of installing an additional 500 kW hydro-set.

Stream gauging and other preliminary investigations for hydro-electric schemes have been carried out at Lae, Rabaul, Madang, Wewak and Highland stations.

There are possibilities for major hydro-electric development in the following localities:—Rouna Falls (near Port Moresby), Upper Snake and Busu-Erap-Leron (near Lae), Upper Ramu (near Markham-Ramu divide—80 miles from Lae) and Hathor Gorge (on Purari River) with an estimated average power of 100,000 kW, 150,000 kW, 2 million kW, 250,000 kW, and 3 million kW respectively. These have estimated run-offs of 1,400; 6,000; 12,000; 1,000; and 75,000 cusecs respectively.

In an area of 150,000 square miles of the Eastern New Guinea mainland, the power potential has been estimated at 150 kW per square mile which compares favourably with potentials of 170 kW per square mile for Switzerland and 95 kW per square mile for Norway.

D. STATISTICAL SUMMARY, 1952-53 AND 1957-58.

The following table shows statistics for each State separately and for the six States combined for 1952-53 and 1957-58 and relates to:—(i) the numbers and installed capacity of central electric generating stations, (ii) the values of production and output and the average numbers of persons employed in the generating side of the electricity supply industry and (iii) the amount of electricity generated and the number of ultimate consumers of electricity.

For further statistics of the electricity supply industry (years 1938-39 and 1953-54 to 1957-58), see Chapter VI.—Manufacturing Industry.

(a) Not available for publication; included in the total for Australia. (b) Average employment in generating station, over whole year, including working proprietors. (c) Value, at generating station, of electricity produced plus certain earnings. (d) Value added in the process of generation. (e) Total generated including that generated by factories for their own use. (f) Approximate figures supplied by the electricity authority in each State. An "ultimate consumer" is a person, business, undertaking, etc., that has contracted to receive electric power from a public or private organization supplying this service. The number of ultimate consumers is not identical with the number of persons served with electricity because one ultimate consumer may represent three or four persons, e.g. in a household.

CHAPTER VIII.

WATER CONSERVATION AND IRRIGATION.

A. RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS.

§ 1. Introduction.

Official Year Book No. 37, pages 1096-1141, contained a special article "The Conservation and Use of Water in Australia" prepared by Mr. Ulrich Ellis of Canberra. In subsequent issues, much of Mr. Ellis's article of a statistical nature has been advanced, as has the general information on the more important developments in this field, but for details of general, descriptive and historical matter reference should be made to the original article. Appended to the special article, pages 1140-41, was a bibliography of selected books, reports, papers, etc., dealing with the development of the water resources of Australia and their conservation.

For further details on geographical and climatic features determining the Australian water pattern, reference should be made to Chapter II.—Physiography; on water supply and sewerage in metropolitan areas, cities and towns to Chapter XIX.—Local Government; and on the generation of hydro-electric power to Chapter VII.—Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States may be found on pages 259-265 of this Year Book and a map showing the extent of known artesian basins throughout Australia is shown on page 257.

§ 2. Water Resources and their Utilization.

1. **Surface Supplies.**—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. At present, therefore, it is impossible to estimate, with any degree of reliability, the total average annual flow of Australian streams, but it would probably amount to only a small figure in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Nile, 72; Danube, 228; Amazon, 1,780; Volga, 148; Mississippi, 474; and the ten main rivers of the United States of America in the aggregate, 900.

2. **Major Dams and Reservoirs.**—The table below lists existing major dams and reservoirs, together with those under construction and those projected as at June, 1959:—The list is confined to dams and reservoirs with a capacity of 100,000 acre feet or more. There are, in addition, many other dams and reservoirs of smaller capacity in Australia.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA.

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet).	Remarks.
EXISTING DAMS AND RESERVOIRS.				
Eucumbene	Eucumbene River, New South Wales	3,500,000	381	Part of Snowy Mountains Hydro- electric Scheme..
Eildon	Upper Goulburn River, Victoria	2,750,000	250	Storage for irrigation and for the generation of electricity.
Hume	Murray River near Albury	1,800,000	176	Part of Murray River Scheme— storage for domestic, stock and irrigation purposes. Being increased to 2,500,000 acre feet. Hydro-electric power also developed.
Miena	Great Lake, Tas- mania.	(a)984,500	40	Regulates water to Waddamana hydro-electric power station..
Burrinjuck	Murrumbidgee River New South Wales	837,000	264	Storage for irrigation and pro- duction of hydro-electric power
Somerset	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station.
Lake Victoria ..	Murray River, near South Australian border, in New South Wales	551,700	..	Natural storage for irrigation in South Australia. Storage im- proved by construction of embankments and control regulators.

(a) Useful storage only.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued.*

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet).	Remarks.
EXISTING DAMS AND RESERVOIRS— <i>continued.</i>				
Lake Echo ..	Lake Echo, Tas- mania	(a)412,200	60	Storage for Lake Echo and Tun- gatinah hydro-electric power stations.
Waranga ..	Goulburn River, Victoria	333,400	..	Irrigation storage.
Tinaroo Falls ..	Barron River, North Queensland	330,000	133	For irrigation purposes in the Mareeba-Dimbulah area.
Wyangala ..	Lachlan River, New South Wales	303,900	190	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power.
Glenbawn ..	Hunter River, near Scone, New South Wales	293,000	251	Part of Hunter Valley conserva- tion work, for irrigation and flood mitigation.
Rocklands ..	Glenelg River, Vic- toria	272,000	..	Part of Wimmera-Mallee domes- tic and stock water supply system.
Clark ..	Derwent River, Tas- mania	(a)253,400	200	Serves Tarraleah hydro-electric power station.
Avon ..	Avon River, New South Wales	173,800	232	Part of Sydney water supply.
Glenmaggie ..	Gippsland, Victoria	154,300	100	Storage for irrigation.
Lake St. Clair ..	Central Highlands, Tasmania	(a)154,200	..	Improved natural storage for Tarraleah hydro-electric power station.
Lake Brewster ..	Lachlan River, near Hillston, New South Wales	123,900	..	Storage of rural water supplies for the lower Lachlan.
Cairn Curran ..	Loddon River, Vic- toria	120,600	..	Storage for irrigation.
Upper Yarra ..	Yarra River, Victoria	110,000	270	For Melbourne water supply.

DAMS AND RESERVOIRS UNDER CONSTRUCTION.

Menindee Lakes Pro- ject ..	Darling River, near Menindee, New South Wales	2,000,000	..	Part of Darling River water con- servation scheme, for irrigation and possible hydro-electric power generation.
Warragamba ..	Warragamba River, New South Wales	1,694,900	379	For Sydney water supply. Also provides for generation of hydro-electricity and flood mitigation.
Burrendong ..	Macquarie River, near Wellington, New South Wales	1,361,000	240	For rural water supplies, flood mitigation and possible hydro- electric power generation.
Keepit ..	Namoi River, near Gunnedah, New South Wales	345,000	177	For rural water supplies and hydro-electricity generation.
Tantangara ..	Murrumbidgee River, New South Wales	(a)193,000	148	Part of Snowy Mountains Hydro- electric Scheme.
Wellington ..	Collie River, Western Australia	150,000	112	Existing dam is being enlarged for supply of water to irri- gation districts and to agri- cultural areas and towns.
Koombooloomba ..	Tully River, North Queensland	146,000	123	For hydro-electric and possibly irrigation purposes.

DAMS AND RESERVOIRS PROJECTED.

Burdekin Falls ..	Burdekin River, North Queensland	6,584,000	150	For generation of hydro-electric power, irrigation and flood mitigation.
Blowering ..	Tumut River, New South Wales	800,000	250	Part of Snowy diversion scheme, for irrigation and hydro- electric power generation.
Jindabyne ..	Snowy River, New South Wales	560,000	210	Part of Snowy Mountains Hydro- electric Scheme.
Warkworth ..	Wollombi Brook, Hunter Valley, New South Wales	400,000	100	Flood mitigation dam for the Hunter Valley
Arthur Lakes ..	Source of Lake River near Great Lake, Tasmania	(a)339,000	50	Part of Great Lake hydro-electric power development.
Tumut 4 ..	Tumut River, New South Wales	138,000	300	Part of Snowy Mountains-Hydro- electric Scheme.
Tumut 3 ..	Tumut River, New South Wales	120,000	240	Part of Snowy Mountains Hydro- electric Scheme.

(a) Useful storage only.

3. Irrigation.—(i) *History.* For some brief remarks on the history of irrigation in Australia referring to the efforts of the Chaffey brothers and to the Victorian Irrigation Act in 1886 see issues of the Official Year Book prior to No. 39. Trends in irrigation practice in more recent years were described in Official Year Book No. 37, page 1009.

(ii) *Extent and Nature of Irrigated Culture.* About half of Australia's irrigated acreage is in Victoria, and about two-thirds is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In those areas served by the Murray and its tributaries, irrigation water is used extensively for vines, orchards, pastures, fodders, and for domestic and stock purposes. Approximately forty per cent. of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where vegetables, orchards, fodders, and pastures are served. Large scale irrigation schemes have not been developed in Tasmania or the Northern Territory although reference is made on page 282 to investigations at present being carried out in the Northern Territory to determine the availability of irrigation water for rice production.

The following table shows the area of land irrigated in each State during the years 1954-55 to 1958-59:—

AREA OF LAND IRRIGATED.

(Acres.)

Season.	N.S.W. (a)	Vic. (b)	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

(c) Not available for publication.

(d) Included in Other Crops.

(e) Includes Tobacco, 7,490 acres.

(f) Includes lucerne for both hay and pasture.

(g) Includes

lucerne for pasture.

(h) Incomplete; excludes area of rice irrigated.

(iii) *Research.* Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following:—high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; soil treatments to improve the physical condition of irrigated heavy clay soils; the utilization of irrigated pastures by stock; growth problems affecting plants and trees; the prevention of evaporation from water storages; and the potability of saline waters for stock.

The Commonwealth Scientific and Industrial Research Organization maintains the following research stations:—Merbein (Victoria)—horticultural problems, particularly of the dried vine fruits industry; Griffith (New South Wales)—the influence of irrigation on plant life (using horticultural trees as test plants), irrigation methods, land drainage and soil structure; Deniliquin (New South Wales)—irrigated pastures; and the Kimberley Research Station (Western Australia)—tropical crops and pastures. In the maintenance of Merbein and Griffith Stations, the Commonwealth is assisted, financially and otherwise, by the New South Wales Water Conservation and Irrigation Commission, by the Dried Fruits Export Control Board and by private organizations.

The Soils Division of the Organization has made detailed surveys of more than a million acres since 1927, with less detailed reconnaissance surveys over many millions of acres. The Division works closely with State authorities. The keynote of soil investigations is relationship between soil and land use, and there is an increasing tendency to seek such surveys before irrigation districts are established. Research is also conducted in the field of water percolation in relation to soil structure.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation Areas. It is representative of the State Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including Extension Groups). Finance is provided by these authorities on an agreed basis. The objectives are:—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

4. Preservation of Catchments.—Since water conservation commences on the catchments, it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years, efforts to counteract soil erosion have been intensified and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

5. Sub-surface Supplies.—(i) *General.* There is no national body in Australia concerned with Commonwealth-wide research into and delineation of underground water resources. However, the Australian Academy of Science, in 1956, instituted a Standing Committee on Hydrology; as a result of discussions by this committee, the Academy, in 1958, recommended the need for such a body. The Commonwealth Government subsequently convened, in 1959, a meeting of interested Government agencies from all States to discuss the need for a permanent Commonwealth and States Conference on Underground Water and the need for the appointment of more Government hydro-geologists. The meeting acknowledged both these needs; its decisions are being considered by the respective Governments.

Although there is no national co-ordinating body, the various States and Territories do maintain Geological Surveys and Water Commissions which are continually extending the knowledge of their own States.

As a result a more or less complete general picture of the available and potential surface water resources exists, but much remains to be done with regard to the location and development of sub-surface supplies (artesian, sub-artesian and ground water), in view of their importance as the basis of settlement over large areas of Australia.

The extent of the artesian basins—particularly the Great Artesian Basin—has been determined fairly accurately while the use of sub-artesian supplies is extensive and more development is possible. The shallower ground-water supplies, however, particularly along alluvial valleys and coastal sandbed areas, have not been investigated or developed to any degree, except in a few localities.

(ii) *Artesian and Sub-artesian Supplies.* Pressure water, variable in quantity and quality, either artesian or sub-artesian, is obtainable in many parts of Australia, the various artesian basins extending over approximately one-third of the continent. A map of Australia showing the extent of the known artesian basins appears on page 257 of this Year Book.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 670,000 square miles, comprising about 430,000 in Queensland, 80,000 in New South Wales, 120,000 in South Australia and 40,000 in the Northern Territory. Of the numerous defined major and minor water-bearing basins in Australia, the following are the principal:—

PRINCIPAL WATER-BEARING BASINS: AUSTRALIA.

Name.	State.	Geological Age of Chief Aquifers.	Approximate Area.	Depth to Pressure Water.
			Square Miles.	Feet.
Great Artesian ..	Queensland, New South Wales, South Australia and Northern Territory	Mesozoic	670,000	Up to 7,000
Desert and Fitzroy Murray ..	Western Australia, Victoria, New South Wales and South Australia	Mesozoic-Palaeozoic Miocene-Oligocene ..	160,000 107,000	100 to 1,500 100 to 900
Eucla	Western Australia, South Australia	Pliocene-Miocene ..	68,000	300 to 2,000
Barkly	Northern Territory, Queensland	Cretaceous, Cambrian and Upper Precambrian	57,000	150 to 1,000
North-west ..	Western Australia	Cretaceous, Permian ..	40,000	230 to 4,000
South-west ..	Western Australia	Recent, Jurassic ..	10,000	200 to 2,500
Pirie-Torrens ..	South Australia ..	Recent, Pleistocene ..	4,000	Up to 600
East Gippsland ..	Victoria ..	Pleistocene-Oligocene	2,500	200 to 1,800
Adelaide ..	South Australia ..	Recent, Oligocene ..	1,100	10 to 850
Basins of Ord-Victoria Region	Northern Territory, Western Australia	Mainly Cambrian and Permian	Unknown	Unknown

More than 3,000 artesian bores have been constructed within the Great Artesian Basin, while the daily free discharge from all bores continuing to flow in Australia has been stated to exceed 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but it is unsuitable for plant life, while in certain areas sub-artesian waters are suitable for all uses including irrigation. In some districts, a considerable amount of irrigation is carried out from shallow ground-water supplies.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, many will not cease, but will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by sandstone outcrops. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or "bore drains" and the careless use of water. (For greater detail on this subject see Official Year Book No. 37, pp. 1103-4.)

(iii) *Ground Water.* Ground water supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes. Two of the most important of these supplies are in New South Wales. The Hunter District Water Board pumps 15 million gallons a day for general use from the Tomago coastal sands near Newcastle and at Botany, Sydney, private industry pumps 5 million gallons a day for its own use from similar sands.

Recent exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day.

§ 3. National and Interstate Aspects.

1. *General.*—As the Commonwealth Constitution makes special reference to water problems, both the Commonwealth and the State Governments have an interest in the control and conservation of water. The main responsibility for control of water resources resides in the individual State governments, but as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following sections.

In the Report on Irrigation, Water Conservation and Land Drainage presented to the Commonwealth Government by the Rural Reconstruction Commission in 1945, national aspects of water conservation and use were emphasized. The report recommended that, to obviate lack of co-ordination, an all-Australian plan having the assent of the various governments be adopted, and that the Commonwealth should endeavour to promote interstate co-operation and co-ordinated development generally.

In 1946, a conference between the Commonwealth and States agreed to revive the Irrigation Production Advisory Committee first established under the authority of the Australian Agricultural Council in 1938. Its functions are:—(a) to prepare for the consideration of the Australian Agricultural Council or any Committee of Ministers appointed by the Council, conclusions formed from investigations to be carried out by Commonwealth and State Officers into the various agricultural industries which it is possible to develop on irrigated lands; (b) to undertake long-term co-ordination of land utilization in irrigable areas served by the River Murray and its tributaries, involving co-ordination of all available lands and the carrying out of such supplementary investigations as may prove necessary.

2. *Murray River Scheme.*—(i) *General.* The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Murrumbidgee (980 miles), the Darling (1,700 miles), and the Goulburn (280 miles). The average annual flow of each of the chief contributory streams is as follows:—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,506,000 acre feet; Murrumbidgee River, 2,280,000 acre feet; Goulburn River (including Broken River), 2,502,000 acre feet; Darling River, 2,224,000 acre feet; and Ovens River, 1,169,000 acre feet. Irrigated production in the River Murray basin is mainly in the form of grapes for wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, fat lambs, poultry, eggs and pigs.

For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia, see issues of the Year Book prior to No. 39. The Agreement provided for the construction of works, the allocation of the water between the three States, and the appointment of a Commission to implement the Agreement. The Commission comprises four Commissioners, representing the Commonwealth and the three States respectively. The Commonwealth representative presides.

(ii) *River Murray Waters Agreement.* Under the Agreement, construction works are carried out by the States (who are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to fill Lake Victoria storage once, and with the aid of water returned from Lake Victoria, to maintain certain specified flows in the lower river varying from 47,000 acre feet a month in the winter months to 134,000 acre feet a month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. These flows are to meet domestic and stock requirements in South Australia, losses of water in lockages and evaporation losses other than in the lakes at the Murray mouth, together with 603,000 acre feet per annum for diversion from the Murray for irrigation in South Australia. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949, see Official Year Book No. 40, page 1065, and earlier issues.

At a conference of Ministers held in July, 1949, to consider the diversion of the Snowy River, it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 440,000 acre feet per annum would be added to the Murray River (see para. 4, Snowy Mountains Hydro-electric Scheme, p. 248) and that a storage of not less

than 1,500,000 acre feet should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and found that an increase in capacity of 500,000 acre feet in storage on the Upper Murray River above Albury was the maximum that was economically justifiable for the regulation for irrigation purposes of the waters of the Upper Murray River and of waters added from the Snowy River. The Commission agreed that this increase could best be provided by increasing the size of the Hume Reservoir from its previously designed capacity of 2,000,000 acre feet to 2,500,000 acre feet, but if additional storages for hydro-electric purposes become justified in the future further increases would best be provided at some other site. It subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for this enlargement of the Hume Reservoir to 2,500,000 acre feet. A conference of Ministers considered the recommendation in July, 1954, and agreed to the enlargement. In addition, it was agreed that the Commission should be given power to construct regulators and to carry out such other work on the River Murray between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7th April, 1955. In view of the proposed diversions by the Snowy Mountains Authority to and from the River Murray, and for other reasons, amendments to those sections of the River Murray Waters Agreement dealing with the distribution of the waters of the Murray were considered desirable. Following Ministerial conferences, amendments were ratified by the four Parliaments concerned and came into force on 6th November, 1958.

The estimated quantity (in acre feet) of water diverted during 1958-59 from the Murray and its tributaries for irrigation and other purposes under the River Murray Agreement was as follows:—New South Wales, 2,155,000; Victoria, 2,576,000; South Australia, 260,000; a total of 4,991,000 acre feet.

(iii) *River Murray Works.* One of the major works of the Murray River Scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 33,000 acres. The design comprises a mass concrete spillway and outlet works extending 1,000 feet and an earthen embankment 110 feet high extending for 4,000 feet across the river flats. The length of the total structure is approximately one mile. Work is nearly completed on the enlargement of the reservoir to its approved capacity of 2,500,000 acre feet. The fixed spillway was completed to its final level in May, 1957, and installation of flood gates to raise the level a further 24 feet was completed in September, 1958. The anchoring of the concrete section of the dam to the underlying rock by prestressed cables was still in progress in September, 1959. On completion of this work, the storage may be raised to its approved capacity. In the meantime, the storage can be progressively increased as work proceeds.

The Yarrawonga Diversion Weir was completed in 1939 to raise the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan Junction and the other below the Lachlan Junction.

The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet a second, and will serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet a second, and is designed to serve 270,000 acres. Only a portion of each area will be irrigated.

Adjoining the river in New South Wales and 35 miles from the Murray-Darling Junction, Lake Victoria storage, with a capacity of 551,700 acre feet and a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. Work has recently been completed on the enlargement of the inlet channel to Lake Victoria to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The total capacities of such main storages are: New South Wales—Burrinjuck (Murrumbidgee), 837,000 acre feet; Wyangala (Lachlan), 303,900 acre feet; Victoria—Eildon (Goulburn), 2,750,000 acre feet; Waranga (Goulburn), 333,400 acre feet. More details of these and other State works on Murray tributaries will be found in the sections dealing with State systems. No storages exist on the Murray in South Australia.

3. New South Wales-Queensland Border Rivers Agreement.—The New South Wales-Queensland Border Rivers Agreement came into effect on 1st July, 1947. The Agreement provides for the construction of certain works on those sections of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland, for the furtherance of water conservation; water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Commission to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir in the Macintyre River at Goondiwindi and the existing weir in the Barwon River at Mungindi. The costs of these works and of administration are to be borne by the States in equal shares. The agreement further provides that the water discharged from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

The Water Conservation and Irrigation Commission of New South Wales, which is the constructing authority for the dam, carried out investigations of several dam sites on the Dumaresq River near Mingoola Station homestead, which is approximately 39 miles from Tenterfield. Foundation drilling supplemented by a geophysical survey carried out by the Commonwealth Bureau of Mineral Resources disclosed unfavourable foundation conditions at all sites, the depth of alluvium overlying sound rock exceeding 150 feet in all cases. In an endeavour to obtain more economical storages, investigations were extended to tributary streams and superficially suitable sites have been located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. Exploratory drilling of the tributary sites is now in progress.

The Irrigation and Water Supply Commission of Queensland is the constructing authority for the new weirs and regulators. The construction of Bonshaw and Cunningham Weirs on the Dumaresq River was completed in January, 1953, and June, 1954, respectively.

A weir and regulator is at present under construction on the Barwon River at the offtake of the Boomi River. The construction of a low level weir to establish a pumping pool at Glenarbon on the Dumaresq River was complete at 30th June, 1959, except for the installation of a fish ladder. The existing Goondiwindi and Mungindi Weirs are being maintained; operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed, it is unlikely that any weirs, other than those referred to above, will be required.

The catchments for the border streams (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland) and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that it is necessary to supplement rainfall from April to October by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

4. Snowy Mountains Hydro-electric Scheme.*—Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in

* See also Chapter VII.—Electric Power Generation and Distribution, p. 216. For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX—Miscellaneous, of Official Year Book No. 42.

1947 and 1948, and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament in July, 1949, passed the Snowy Mountains Hydro-electric Power Act setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The Scheme involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. In addition, works required to make use of the waters of the Upper Murrumbidgee, the Upper Tumut, the Upper Tooma and the Geehi Rivers for power generation also provide additional regulation of these streams and this makes more water available for irrigation. Details of the two transmountain diversions and the associated power works together with details of progress and construction are given in Chapter VII.—Electric Power Generation and Distribution.

Commencing in the 1960–61 irrigation season, the Scheme will make available an additional 170,000 acre feet of water each year for irrigation in the Murrumbidgee Valley. During 1963, this will increase to 500,000 acre feet per annum. When all works are completed, it is estimated that the total gain to the Murrumbidgee by diversion and regulation will amount to 1,120,000 acre feet per annum and the total gain to the Murray will be 800,000 acre feet per annum. This additional water should be sufficient to provide irrigation for approximately 1,000 square miles of land which should result in additional annual primary production to the value of some £30 million per annum.

B. STATES AND TERRITORIES.

§ 1. Australian Local Pattern of Water Conservation and Use.

The foregoing sections deal with water conservation and irrigation in Australia generally and with national and interstate projects. The following survey indicates the local pattern of water resources and the steps taken by the State Governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria, almost every form of water scheme is in operation. In New South Wales, major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest appertains almost exclusively to hydro-electric generation. The Northern Territory is concerned primarily with stock supplies and the safeguarding of long stock routes.

§ 2. New South Wales.

1. *General.*—(i) *Rainfall and History.* In issue No. 37 of the Year Book (p. 1110), information is given on the pattern of rainfall and the history of irrigation in New South Wales. (See also Chapter II.—Physiography, p. 45, of this issue.)

(ii) *Administration.* The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood

control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme, and river improvement works.

Under the Water Act, the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales—Queensland Border Rivers Agreement ratified by Acts of both States in 1947, see page 248 of this chapter.

2. Schemes Summarized.—(i) *Location and Type.* The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam and Lake Brewster on the Lachlan, a tributary of the Murrumbidgee, and by Glenbawn Dam on the Hunter River. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and head storages have been commenced on the Macquarie and Namoi Rivers whilst Menindee Lakes storage, to conserve the waters of the Darling River, is being constructed. Substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including irrigation areas, irrigation districts, water trust districts, flood control and irrigation districts and river improvement districts. There are seven irrigation areas:—The Murrumbidgee Irrigation Areas consisting of 451,251 acres served with water through a channel system stemming from the river at Berembed Weir; the Coomealla Irrigation Area of 34,672 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,549 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,806 acres, supplied with water pumped from the Murrumbidgee; the Tullakool Irrigation Area of 18,006 acres supplied from the Edward River by diversion at Stevens Weir; and the recently established Buronga (8,693 acres) and Mallee Cliffs (1,900 acres) Irrigation Areas served by pumping from the Murray. All these areas are administered by the Commission and details of the various schemes are given in sub-section (iii) below.

(ii) *Works.* The capacities of the main storages (in acre feet) are:—

Murray:—Half share of Hume Reservoir, weirs and locks to Wentworth (1,011,420); Stevens Weir, Edward River (7,165).

Murrumbidgee:—Burrinjuck Dam (837,000); Berembed Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740).

Lachlan:—Wyangala Dam (303,900); Lake Brewster (123,900); Lake Cargelligo (29,435); Jemalong Weir (2,200).

Hunter:—Glenbawn Dam (185,000 acre feet irrigation storage; 108,000 acre feet flood mitigation storage).

Water from the Hume Reservoir is used for domestic and stock purposes, to provide bulk supplies for country towns, for the irrigation of vines, fruits and fodder in the Curlwaa and Coomealla Areas, for rice and other cereals and for pastures in the Tullakool Irrigation Area, for domestic and stock supply and irrigation in the Berriquin, Wakool and Denimein Districts, and for water trusts for domestic and stock purposes and/or irrigation.

The Wyangala Dam is 30 miles upstream from Cowra in the Central West. It has a catchment of 3,200 square miles. Water from the dam, supplemented by the unregulated flow of the Belubula River, provides for domestic and stock purposes along the full length of the river (over 700 miles) and also for irrigation by land holders operating licensed pumps. The towns of Cowra, Forbes, Condobolin, Hillston and Booligal are supplied. Balance storages at Lake Cargelligo and at Lake Brewster conserve water during periods of high flow for release as required. Water from the Lachlan, diverted at Jemalong Weir, supplies the districts of Jemalong and Wylde's Plains, serving an area of 224,556 acres. Proposals for future development include provision of a head storage on the Belubula River.

The approximate total length of channels (including main canals) constructed by the Water Conservation and Irrigation Commission in New South Wales is 3,247 miles. The approximate length of drains and escape channels is 1,000 miles, and the total length of pipe lines is approximately 68 miles, making a grand total of 4,315 miles of channels and pipe lines, etc.

(iii) *Extent of Systems and Nature of Irrigated Culture.* The following table shows the areas of the various irrigation systems and particulars of the areas under irrigated culture in New South Wales during 1958-59:—

AREAS OF SYSTEMS AND OF LAND IRRIGATED: NEW SOUTH WALES, 1958-59.

(Acres.)

System, etc.	Total Area.	Area Irrigated.										Total.
		Rice.	Other Cereals Grown for Grain.	Lucerne. (a)	Other Fodder Crops.	Pastures.		Vineyards.	Orchards. (c)	Vegetables.	Fallow Land and Miscellaneous.	
						Sown. (b)	Natural.

(a) Includes grazing and cutting.

(b) Perennial and annual self-seeding. Perennial amounted to 53,042 acres.

(c) Citrus and deciduous. Deciduous amounted to 9,277 acres of which 7,795 acres were in the Murrumbidgee Irrigation Area.

(d) Not available. (e) Incomplete. (f) Area irrigable; details of area actually irrigated are not available.

(g) Excludes domestic and stock supplies for which particulars are not available. (h) Tobacco.

(i) Includes Flood Control Districts; but excludes some Irrigation Trusts for which information is not available.

3. Murrumbidgee. Irrigation. Areas.—(i) Description. These areas together with adjacent lands supplied under agreement, received 288,412 acre feet, or about a quarter, of the total water (1,183,989 acre feet) allocated within the State for stock, domestic supply and irrigation. They are served by the Burrinjuck Dam (capacity 837,000 acre feet), on the Murrumbidgee, 40 miles north-west of Canberra. The catchment above the dam is 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation areas and districts is supplemented by unregulated flow from the Tumut River below the dam. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied to the Irrigation Districts of Tabbatta, Benerembah and Wah Wah and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter and spring freshets, fed by melting snows, and is released during the September-May irrigation season. It passes along the river channel to Berembred Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet a second. The main canal has been completed to beyond Griffith, 96½ miles from the off-take. Reticulation channels aggregate approximately 879 miles and drainage channels 802 miles. In addition, approximately 446 miles of supply channels run through irrigation districts adjacent to the Murrumbidgee areas in which the water supply is operated and maintained by the Water Conservation and Irrigation Commission, but land transactions are not under its control.

The land on which the Murrumbidgee Irrigation Areas are situated originally comprised large sheep stations and was sparsely populated. Population was 12,000 in 1923, 15,000 in 1929, 20,000 at the 1947 Census and 24,000 at the 1954 Census. At the 1954 Census, the population of the Yanco District (with Leeton as the centre) was 10,000 and the population of the Mirrool Area (with Griffith as the centre) was 14,000. At 30th June, 1958, the population of Leeton Shire was estimated at 10,400, and that of Wade Shire at 15,450.

(ii) *Administration.* The Water Conservation and Irrigation Commission control land transactions and water supplies for the Murrumbidgee Irrigation Areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission under freehold or perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1959, was 32,970 acres, including 39,171 held for short lease grazing, agriculture, etc.

(iii) *Production.* Since the inauguration of the scheme in 1912, the volume of production from the area has greatly increased. Numbers of new crops are grown while the volume of the major products of the area prior to the scheme, such as wool and livestock for slaughtering, has expanded considerably. The principal products to-day are: wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans and root vegetables.

Rice growing was initiated on the Murrumbidgee Irrigation Areas in 1924 and has since become the most important crop grown in the area. In 1958–59, the total area sown was 28,021 acres and the total quantity of water delivered for the rice crops was 146,697 acre feet. In a normal season, the water supplied for rice represents about one-half of the total delivered to the Murrumbidgee Irrigation Areas.

Co-operation is a prominent feature in the Murrumbidgee Areas. Co-operative organizations in the Mirrool section handle about 300,000 bushels of fruit a year (compared with 54,600 in 1927–28). The annual sales turnover of the Leeton cannery in recent years has exceeded £2,000,000. Settlers and government agencies co-operate extensively in all matters relating to irrigation practice.

4. Other Irrigation Areas.—The Curlwaa, Coomealla, Hay, Buronga, Mallee Cliffs and Tullakool Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which also is responsible for the operation and maintenance of works to supply water.

Curlwaa Area, on the Murray near Wentworth, consists of 10,549 acres of which 7,815 acres were occupied at 30th June, 1959. Production consists of dried vine fruits, deciduous fruits and fodder crops.

Coomealla Area; 9 miles upstream from Curlwaa, comprises 34,672 acres of which 31,013 acres were occupied at 30th June, 1959. Production consists of vine and citrus fruits. An extension of the Coomealla Irrigation Area was completed in recent years to provide irrigation farms for ex-servicemen and 100 ex-servicemen were placed on the new farms.

Tullakool Area, formerly part of the Wakool Irrigation District, comprises 18,006 acres of which 14,311 acres are occupied. Main products are fat lambs, wheat and rice.

Hay Area, on the lower Murrumbidgee, consists of 6,806 acres, of which 6,241 acres are occupied. Production comprises dairy products, fat lambs, sheep, wool and fodders.

Buronga Area, a new area on the Murray River, upstream from Wentworth, consists of 8,693 acres, of which 1,151 acres are occupied. Production will be mainly fruit, vegetables and dairy products. Mallee Cliffs is also a new area upstream from Wentworth, its area being 1,900 acres, of which 1,332 acres are occupied.

5. **Irrigation Districts.**—These Districts are set up under the Water Act for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders. The following are the districts or provisional districts constituted and the areas of land benefited:—*Murray River*—Wakool District (completed) 494,708 acres, Berriquin Provisional District 781,152 acres, Denibootea Provisional District 307,212 acres, Denimein Provisional District 147,005 acres, Jernargo Provisional District (certain portions of which have been included in Berriquin District) 4,325 acres, Barramein Provisional District (domestic and stock supply only—works not yet commenced) 89,080 acres; *Murrumbidgee River* (completed)—Benerembah District 112,818 acres, Tabbita District 10,745 acres, Wah Wah District 575,224 acres, Gumly Provisional District 353 acres; *Lachlan River* (completed)—Jemalong and Wylde's Plains Districts 224,556 acres.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation—that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin, Denibootea and Denimein Districts is diverted through a main canal which will be 100 miles long when completed. Water for the Wakool Irrigation District and the Tullakool Irrigation Area is diverted from the Edward River at Stevens Weir, and a supplementary supply is also obtainable from Mulwala canal. At 30th June, 1959, the total length of completed canals and channels in Berriquin District was 970 miles, including Mulwala canal 75 miles, Berrigan channel 22 miles, subsidiary channels 767 miles, escape channels 96 miles and cross drainage channels 10 miles. Off-take capacity of the Mulwala canal is 5,000 acre feet a day.

Wakool, with 384 miles of channel, contains 308 holdings and the area developed by irrigation comprises about one acre in eight of the total area. The total area irrigated in 1958–59 was 67,931 acres and water supplied was 110,314 acre feet. Crops comprised fodders, pastures, rice, cereals and vegetables, but sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Total irrigated acreage was 228,240 at 30th June, 1959. Sheep and wheat growing are the main industries. The fat lamb industry is well developed and expanding. Dairying is making headway, and a butter factory has been established at Finley.

In the Benerembah, Tabbita and Wah Wah Districts, supplied from the channels of the Murrumbidgee Irrigation Areas, the quantity of water supplied during the 1958–59 season for irrigation, etc., was 95,864 acre feet, and the area irrigated was 49,523 acres, including rice and other cereals, pastures, and fodder crops.

For the same season, 8,468 acre feet of water were supplied from the Lachlan River to irrigate a total area of 10,340 acres within the Jemalong and Wylde's Plains Districts.

6. **Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.**—The Water Act provides for the constitution of Trust Districts for domestic and stock water and irrigation and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed, they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted (the area in acres of each district

is shown in parentheses)—*Murray River*—Tuppal Creek (78,080), Bullatale Creek (68,320), Little Merran Creek (157,440), Poon Boon (34,300), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,001,210); *Lachlan River*—Torrigan, Muggabah and Merrimajeele Creeks (170,240) Condobolin West Weir (4,480), Marrowie Creek (292,640), Ulonga (64,960), Micabil Weir (11,500); *Miscellaneous*—Algudgerie Creek (9,760), Nidgerie Weir (46,880), Great Ana Branch of Darling River (967,339), Collarenebri town water supply (117)—making in all a total area of 2,909,456 acres. Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. The following are the Trust Districts (area in acres is shown in parentheses):—*Murray River*—Bama (3,446), Goodnight (1,167), Bungunyah—Koraleigh (1,810), Glenview (661), Brangan (4,933); *Darling River*—Pomona (1,580); *Hunter River*—Blairmore (315)—making in all a total area of 13,912 acres.

The Lowbidgee Provisional Flood Control and Irrigation District (375,000 acres), the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. There are 50 holdings. Another district, Medgun (272,800 acres) near Moree in the North-West is also in operation. There are 20 holdings in the district and the area benefited by controlled floodings is 61,760 acres.

7. River and Lake, and Farm Water Supplies.—During recent years, the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in dry months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

The Farm Water Supplies Act was passed in 1946. Technical advice and assistance, and also financial assistance, are made available to help individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams.

8. Underground Water.—Extensive use is made of artesian, sub-artesian, and shallow underground water. Eighty thousand square miles in the northern and western portions are covered by the Great Artesian Basin. Eighty-one Bore Water Trusts and 12 Artesian Wells Districts have been constituted. The Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts settlers maintain the drains. Bore Trusts and Artesian Districts cover about 5 million acres and water is distributed through approximately 7,400 miles of open earth drains. The number of artesian bores giving a flowing or pumping supply at 30th June, 1959, was 1,071 and the estimated total daily flow from 600 flowing bores was 61 million gallons. The estimated flow in 1914–15 was 99 million gallons a day for 372 bores. The deepest bore is Boronga No. 2 (4,570 feet), which also has the greatest flow, namely, 1,010,200 gallons a day. Of the total number of bores sunk, 246 have been installed by the Government in connexion with public watering places, Bore Water Trusts or Artesian Wells Districts.

Of other structural basins of sedimentary rocks, e.g. Murray, Cumberland, Oxley and Clarence Basins, the Murray is the largest and also the most important in that it affords stock water supplies over an extensive area of the south-western section of the State. Only a few of these bores flow, the remainder being sub-artesian. Good supplies for stock and, in some instances, small scale irrigation, are obtained from porous sandstones in the Moss Vale-Picton area of the south-western lobe of the Cumberland Basin but the remainder has limited potential. Stock supplies are obtained from bores in the fringe zones of the Oxley Basin but the centre of this basin lies under the Liverpool Range. The Clarence Basin is relatively unimportant from a groundwater viewpoint.

In other parts of the State, the largest and best quality groundwater supplies are obtained from sands and gravels in the alluvium of the major rivers and their tributaries, particularly the western flowing rivers, e.g. Lachlan, Macquarie and Namoi. Supplies of up to 50,000 gallons an hour are obtained from wells and screened bores in these areas and are used for irrigation purposes. The Government is carrying out investigations to determine the groundwater potential of the alluvium of such valleys, particularly with regard to irrigation use, and a test-boring programme is in progress in the Lachlan Valley. Coastal river systems have a much more limited potential in this regard, the main exception being the Hunter.

Old sand dune areas along the coast provide large supplies of good quality water. However, since the soils of these areas are not suited to agricultural pursuits, exploitation has been largely confined to the Sydney and Newcastle areas. Initially a source of Sydney water supply, the Botany sands are now utilized mainly by industry. The Tomago sands provide a considerable proportion of Newcastle water supply.

The older rocks, which are mostly folded and jointed, are very variable in their groundwater potential and only rarely do they yield supplies sufficient and suitable for limited irrigation. Where suitable conditions obtain they yield useful stock supplies, mostly at depths between 50 and 250 feet.

It is necessary under the 1955 amendments to the Water Act that all wells and bores be licensed and details of over 13,000 bores and wells in the State are recorded. When assessed in relation to the geologic and topographic conditions of any particular area, such records provide valuable evidence of the groundwater potential and are thus of considerable benefit to landholders.

Since 1912, the Government has assisted settlers in shallow boring operations for which repayments are required over a period. To 30th June, 1959, the number sunk by the Commission's plants was 4,961 and their average depth was 308 feet.

9. Future Programme.—The programme of post-war development already in hand includes the provision of additional dams and storages, diversion weirs, and flood mitigation and river protection works in various parts of the State. Construction of Burrendong Dam on the Macquarie River is in progress and Keepit Dam on the Namoi River is nearing completion. Legislation has been passed authorizing the construction of a flood control and irrigation dam at Warkworth in the Hunter Valley and a storage dam at Blowering on the Tumut River. The Menindee Lakes storage project, part of the scheme for conserving the waters of the Darling River, is in course of construction. The Hunter River development, of which Glenbawn Dam is an integral part, concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. At 30th June, 1959, work was completed on construction of a diversion weir at Gogeldrie on the Murrumbidgee River from which water will be supplied to a new irrigation area (Coleambally) on the south side of the river comprising not less than 1,000 new irrigation farms. At Wyangala Dam, on the Lachlan River, work has commenced on the temporary lowering of the fixed crest of the dam spillway to enlarge the spillway for passage of greater floods. Investigations are being made concurrently to determine whether the dam can be increased in height to provide a greater storage. Later development will extend to a new area on the north side of the river.

10. Hydro-electricity.—A survey of the use of water for power generation in New South Wales may be found in the previous chapter (*see* p. 222).

§ 3. Victoria.

1. General.—(i) *Rainfall.* Particulars of the rainfall pattern of Victoria were given on page 1117 of Official Year Book No. 37. (*See also* Chapter II.—Physiography, p. 45, of this Year Book.)

(ii) *Administration.* The passing of the Irrigation Act of 1886 put the control of surface waters under the Crown, provided for the establishment of Irrigation Trusts and marked the beginning of irrigation development. In 1905, the Water Act established the State Rivers and Water Supply Commission and gave it control of all irrigation, rural domestic and stock supplies, town water supplies, and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally constituted waterworks trusts or local governing bodies.

The operations of the First Mildura Irrigation Trust, the waterworks trusts and local governing bodies administering town water supplies, the river improvement and drainage trusts and the various sewerage authorities which control sewerage undertakings in country towns, are also subject to general supervision by the Commission.

2. Works Summarized.—Since 1902, when a great drought emphasized the need for a concerted attack on water problems, the total capacity of water storages including Victoria's half share of River Murray storages has increased from 172,000 to 5,246,850 acre feet at 30th June, 1959. Most of the water from these storages is used for irrigation.

The area actually irrigated has risen from 105,000 acres in 1906 to 965,766 acres in 1958–59 to which 1,220,971 acre feet of water were delivered. The Commission estimated the value of irrigated production in 1957–58 at £53,000,000 representing about one-sixth of the value of Victoria's total rural production.

Town water supply and sewerage works have expanded to the stage where two-thirds of the population outside the metropolitan area is served by a reticulated water supply and one-third is served by a sewerage system. Land drainage, flood protection and river improvement have also been advanced.

A domestic and stock water supply is given to various rural areas throughout the State but principally to the Wimmera and Mallee about which a detailed description is provided later in this chapter.

Besides supplying water to its own irrigation districts, the Commission also supervises the diversion of water by private persons by means of licences and permits. In the last ten years, the area so licensed has increased by 50 per cent. and private diverters now provide an eighth of the irrigation production.

Another notable development in the post-war years has been Soldiers' Settlement Schemes based on irrigation. Altogether, nearly one thousand holdings have been prepared for settlers, including more than 500 in the Murray Valley District, 250 at Robinvale and 125 in Gippsland.

3. **Storages.**—The capacities of the main storages in the various systems (in acre feet) at 30th June, 1959, were as follows:—

Goulburn System:—Eildon Reservoir, 2,750,000; Waranga Reservoir, 333,400; Total, 3,104,100; *Murray-Loddon System*:—Half share of River Murray storages, 1,011,420; Cairn Curran, 120,600; Tullaroop, 60,000; Total, 1,340,230; *Wimmera-Mallee*:—Rocklands, 272,000; Total, 538,900; *Gippsland*:—Glenmaggie, 154,300; Total, 154,340; *Coliban*:—62,730; *Werribee-Bacchus Marsh*:—34,900; *Mornington Peninsula*:—5,800; *Orway*:—1,080; *Miscellaneous*:—4,770; *Grand Total*:—5,246,850.

4. **Extent of Systems and Nature of Irrigated Culture.** The following table shows the areas of the various irrigation systems and the areas under irrigated culture during 1958–59.

AREAS OF SYSTEMS AND OF LAND IRRIGATED: VICTORIA, 1958–59.

WATER RESOURCES OF TASMANIA

1958

5. *Irrigation Systems.*—(i) *Goulburn.* The storage capacity for this system is provided principally by Eildon Reservoir. The enlargement of the storage capacity of this reservoir was completed in 1956, and will enable 600,000 acres to be irrigated when the necessary distributary works are completed. Water from Eildon Reservoir flows down the Goulburn River to the Goulburn Weir, located near Nagambie, which raises the summer level of the river about 45 feet for the purpose of diversion. From this weir, water is diverted via the East Goulburn Main Channel direct to the irrigation areas around Shepparton. The two western main channels from the weir (one of which was recently duplicated) convey water to the Waranga Reservoir near Murchison in addition to supplying part of the large Rodney District directly.

Two main outlet channels issue from Waranga Reservoir. One serves the western section of Rodney District while the other serves irrigation districts as far west as Boort, and continues into the Wimmera-Mallee Domestic and Stock System to provide a supplementary supply as far as Beulah East.

Water is also supplied to part of the Goulburn System from Cairn Curran Reservoir on the Loddon River, and Eildon itself may be used to supplement supply to the districts along the Murray River.

The main products of the Goulburn districts are dairy produce, fruit, wool and fat lambs. Annual production of canning fruits in the area is about two-thirds of Australia's total.

(ii) *Murray River System.* The waters of the River Murray are used to supply an area of more than 700,000 acres between Yarrawonga and Merbein. The districts between Yarrawonga and Swan Hill, except Tresco near Swan Hill, are supplied by gravitation and those west of Swan Hill are supplied by pumping.

The Murray Valley Irrigation District, which is served from Yarrawonga Weir, comprises 268,000 acres west of Yarrawonga between the River Murray and Broken Creek. Dairy products, fat lambs and canning fruit are the main items produced.

The gravitation system based on Torrumbarry Weir (52 miles downstream from (Echuca) serves an area of about 378,000 acres around Cohuna, Kerang, Koondrook and Swan Hill. Also included in the Torrumbarry system is the Tresco district supplied by pumping from Lake Boga. Dairying and fat lamb raising are again the major industries. Vine fruits and vegetables are grown around Swan Hill and tobacco growing is increasing in importance.

West of Swan Hill lie four Commission districts with a pumped supply—Nyah, Robinvale, Red Cliffs and Merbein. These contain a total of 1,500 holdings devoted largely to dried vine fruit although citrus fruit and table and wine grapes are of some importance. The area around Mildura is controlled by the First Mildura Irrigation Trust, the only irrigation trust operating in Victoria. It serves an irrigated area about half the combined size of the four Commission districts.

(iii) *Southern Systems.* The most important southern system is an area of 130,000 acres around Maffra and Sale, mainly devoted to dairying. This is supplied from Glenmaggie Reservoir on the Macalister River and from the natural flow of the Thomson River when the flow is adequate. Other important irrigation districts are located quite close to Melbourne around Werribee and Bacchus Marsh. These districts are intensively developed for dairying and vegetable growing.

(iv) *Wimmera-Mallee Domestic and Stock Supply System.* This system serves an area of 11,000 square miles or nearly one-eighth of the State. Without the artificial supply of water, development in this area would be meagre and hazardous owing to the constant threat of drought. The main supply is drawn from the Grampians storages and is supplemented by water drawn from the Goulburn and Loddon Rivers, via the Waranga Western Channel referred to previously, although works in progress will make the Wimmera and Mallee independent of supplies from the Goulburn and Loddon River in the near future. In addition, certain areas in the north of the system are supplied direct from pumps on or near the River Murray.

As far as possible, water is distributed in the winter and spring to reduce evaporation losses in 6,500 miles of Commission channels and 3,000 miles of farm channels. It is the

responsibility of the 10,000 farmers served to provide sufficient storage capacity on their farms to meet their domestic and stock needs for the year. In addition to meeting this demand, the Grampians storages provide a water supply for 40,000 people in 47 towns and are used to irrigate a small area near Horsham.

6. Town Water Supplies and Sewerage.—Details of water supplies and sewerage to towns and local authorities by the Commission are given in § 5 of Chapter XIX., Local Government, of this Year Book.

7. Drainage, Flood Protection and River Improvement.—The largest work in this category undertaken by the State Rivers and Water Supply Commission is the Koo-wee-rup-Cardinia Flood Protection District embracing 80,000 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth £3 million a year.

Another large-scale work, which was completed during 1958–59, is the drainage of 12,500 acres of privately owned land flooded by a recent rise in the level of Lake Corangamite in the Western District. This will free a large area of the lake for grazing in normal years.

By the River Improvement Act of 1948, the formation of local river improvement and drainage trusts under the supervision of the Commission has been greatly facilitated and since 1950, 16 such trusts have been formed. The importance of river improvement work is expected to continue to grow.

8. Finance.—The capital liability of the Commission at 30th June, 1959, was £93,500,000. Of this amount, £64,000,000 was expended on irrigation and £7,000,000 on domestic and stock supply systems. Both these amounts were financed entirely by the State. The total liability for urban supply was £12,000,000 of which 60 per cent. was borne by the State and the remainder by the districts concerned.

9. Underground Resources.—Due to inadequate information as to their extent, the underground waters of Victoria have not as yet been greatly utilized. The first stage of a comprehensive survey of these resources by the Victorian State Rivers and Water Supply Commission, which is partly responsible for the location, investigation and development of subterranean waters, has been completed. It provides records of bores in the Mallee, Wimmera and Glenelg regions, and a description of the Murray Artesian Basin. Investigations have also been made into the underground water resources of local areas such as Orbst Flats, Llowalong Estate on the Avon River and elsewhere.

The Murray Artesian Basin underlies an area of 107,250 square miles, of which 26,808 square miles are in Victoria, 28,269 square miles in South Australia and 52,173 square miles in New South Wales. The quality of the water varies from suitable for domestic purposes in much of the South-western part of the basin to saline and suitable for stock in the rest of the basin. Over 300 bores exist in Victoria, ranging in depth from 50 to 3,000 feet and with an average daily flow of 3,000,000 gallons. In the last few years, the Victorian Department of Mines has expanded considerably the work of exploration for underground water.

10. Future Programme.—The main irrigation work under construction is the enlargement of the channels of the Goulburn System to distribute the extra water now available from the Eildon Reservoir and the Cairn Curran Reservoir. A considerable amount of this work has already been carried out. Other large projects include the construction of Castlemaine Reservoir and important new works in the area known as Carrum Drainage District.

11. Hydro-electricity.—Details of hydro-electricity potential and utilization in Victoria may be found in the previous chapter (*see* page 227).

§ 4. Queensland.

1. General.—(i) *Rainfall.* Particulars of the rainfall pattern of Queensland are given in Official Year Book No. 37, page 1122. (*See also* Chapter II.—Physiography, page 45 of this Year Book.)

(ii) *Administration.* The administration of irrigation and water supply in Queensland is under the control of a Commissioner of Irrigation and Water Supply. For a description of the development of the present administration, see Official Year Book No. 42 and earlier issues.

(iii) *Water Utilization in Queensland.* Queensland's predominant interest in the field of water conservation is the provision of stock and domestic water supplies in its great pastoral areas which contain nearly half of the Commonwealth's cattle and a seventh of the sheep. In addition to the stabilization of water supplies in the pastoral areas and the provision of water along stock routes for travelling stock, the development of irrigated pastures on the eastern seaboard for fattening stock adjacent to meat works and markets has received much attention in later years. The development of projects of water conservation and irrigation on individual farms for irrigation of pastures and fodder crops for dairy herds and for growing small crops and orchard fruits has also received attention.

The State's crops differ from those of other States in that a large proportion is tropical. Sugar-cane is the greatest individual crop, representing in value approximately 45 per cent. of total agricultural production. Approximately 18 per cent. of the sugar-cane acreage was irrigated in 1958-59 and this represented some 42 per cent. of the total irrigated area in Queensland. Queensland is Australia's major tobacco-producing State, and plans are in hand to increase annual production of this crop greatly by means of development under irrigation. The area of tobacco irrigated during 1958-59 represented 94 per cent. of the total plantings of this crop in the State.

2. *Great Artesian Basin.*—(i) *General.* Western Queensland beyond the 20 inch rainfall belt is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, excluding the Cloncurry Mineral Field and the Barkly Tableland. It comprises 430,000 square miles or about two-thirds of the total State area of 667,000 square miles. Statistics of bores and flow as at 30th June, 1959, are:—Artesian bores drilled, 2,620; artesian bores still flowing, 1,725; total depth drilled, 3,704,363 feet; deepest bore, 7,009 feet; total estimated flow, 208 million gallons a day. Certain bores previously classified as "ceased" have been inspected and found to be still flowing. Some ceased bores, after deepening, are again flowing. The average depth of artesian bores is 1,408 feet. Some 9,400 sub-artesian bores, within the Great Artesian Basin, have been registered in Queensland. Artesian pressure and flow are both steadily diminishing. The rate of diminution varies widely throughout the basin. Present general average rates of diminution are:—pressure, 1-2 feet/head, total flow, 2-3 per cent. per annum.

The greater part of the artesian discharge is distributed by open earth channels totalling some 15,500 miles in length. Most of the water flowing along these channels is lost by soakage and evaporation and less than 10 per cent. is actually used by stock. The amount of soakage depends largely on the permeability of the earth and the rate of evaporation varies from season to season, but the shape and maintenance of the drains constitute further factors. The effective utilization of this water could be increased by the use of piping to overcome the loss by soakage and evaporation occurring in the open earth channels.

Although artesian beds underlie such a large area of the State, only 79,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores are not economical watering facilities, because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. Very few new bores exceed 2,000 feet in depth, and a new bore greater than 3,000 feet in depth is exceptional.

Shallow sub-artesian supplies, of variable quality and volume, are available at depths of less than 1,000 feet over a large area of the basin. These beds are not connected with the artesian beds. An essential practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

Although the number of bores has gradually increased over the years, the total flow of all bores has declined since the peak flow of 351 million gallons a day was recorded in 1914. By 1938, the flow was only 230 million gallons a day. The decline gave rise to the fear that supplies were giving out and that the basin was seriously threatened. In 1939, the Queensland Government appointed a committee to ascertain the nature and structure of the Great Artesian Basin with particular reference to the problem of diminishing supply. In its final report, presented in 1954, the majority of the Committee found that the output will continue to decline during the next sixty years when the flow from the remaining flowing bores will be of the order of 110 million gallons per day. At this stage, the discharge from windmills, springs and other leakages and the underflow past the Queensland borders will be of the order of 20 million gallons a day. The total discharge of the order of 130 million gallons a day will be in equilibrium with the recharge of the basin. Numbers of bores on higher ground will cease to flow during the next sixty years and the area served by flowing bores will contract by perhaps 20 per cent.

A programme of strict conservation, involving the restriction of bore flows and improved bore drains, would result in smaller shrinkage of the area served by flowing bores and would actually cost less than the installation and maintenance of pumps or other watering facilities which would be required to provide alternative water supply as additional bores ceased to flow because of a policy on non-restriction. On the other hand, strict conservation would not increase the amount of water ultimately available as perennial flowing supply and would in fact decrease the amount of water passed from intake beds to aquifers within the basin by flattening the hydraulic gradient. The benefit from strict conservation was not considered sufficiently great, nor sufficiently concrete, to warrant implementation.

The quality of artesian water from the greater part of the basin is such that it is not suited for prolonged use for irrigation on most soils. Moreover, artesian supplies are not sufficient for both large scale irrigation and stock-watering. Practically the whole of the final steady-rate discharge from flowing bores will be needed for the watering of stock. Detailed surveys of numerous other sources of underground water in the State, such as the smaller sedimentary basins, the Cainozoic alluvial deposits, recent coastal sands and fractured older rocks, still largely remain to be carried out.

(ii) *Bore Water Areas.* The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity and to conserve artesian supplies by fully utilizing the flows from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by Local Boards or by the Commissioner of Irrigation and Water Supply, acting as a Board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1958-59 are:—Areas constituted, 72; administered by Commissioner, 56; administered by local boards, 6; number abolished, 10; area benefited, 4,425,382 acres; average rate per acre, 1.8d.; number of flowing bores, 56; total flow, 24,092,000 gallons a day; drains served, 2,754 miles.

3. *Other Basins.*—Two major areas bordering the Great Artesian Basin in Queensland carry artesian water. One is located on the western slopes of Cape York Peninsula and the other in the Dawson-Mackenzie River Basin. A small area in which flowing wells occur (the Gatton Basin) extends from Gatton to the coast.

Sub-artesian water supply from the Barkly Basin which extends into western Queensland from the Northern Territory, is referred to in the section dealing with the Northern Territory.

4. *Stock Route Watering.*—During 1935, a scheme was inaugurated to water adequately stock routes in the western portion of the State including main trunk routes connecting Eromanga to Burketown, Charleville to Normanton, and Clermont to Einasleigh, with branches to railheads, a total distance of 3,117 miles. Watering facilities were also provided on subsidiary routes. Under the Stock Routes and Rural Lands Protection Act of 1944, a co-ordinating board was constituted, representative of Government departments and pastoral interests, under the direction of the Minister for Lands and with an officer of that Department as superintendent whose duty was, *inter alia*, to investigate and implement a long-range, co-ordinated plan for adequate watering of all stock routes throughout the State. Natural waters are being supplemented by artificial facilities at intervals of

about 9 miles. Construction is supervised by the Irrigation and Water Supply Commission and by local authorities. Completed facilities are vested in local authorities for control and maintenance. From 1935 to 30th June, 1959, 471 facilities had been completed and at 30th June, 1959, 66 facilities were under construction or investigation.

5. *Irrigation.*—(i) *General.* Irrigation as a means of stabilizing and increasing agricultural production is continuing to receive attention in Queensland. In addition to the Theodore Irrigation Area on the Dawson River, orthodox projects served by a channel system have been developed at Clare, Millaroo and Dalbeg, all on the Burdekin River, and Gibber Gunyah on the Dawson River. St. George on the Balonne River is also being developed. Construction in the St. George Area is approaching completion and 20 farms have been opened, of which 18 are in production. Construction of the main channel system within the Mareeba-Dimbulah Irrigation Area has continued and 25 existing farms are being supplied with water by gravity. Because of the large variations in both monthly and annual river flows, major developments cannot be undertaken until large storage works are provided. Most irrigation in Queensland is undertaken by private farmers operating under licence and obtaining water by pumping from streams or from natural underground storages. There has been considerable development during recent years of individual water conservation projects (water harvesting) to provide storage for irrigation of pastures, fodder crops and small crops, and orchards. Where available, electricity is the most popular source of power for pumping and the principal areas supplied with electricity are the Burdekin Delta, the Lockyer Valley, and the Darling Downs.

It has been estimated that about two thirds of the total area irrigated in Queensland is supplied from underground water. The main areas where these supplies have been extensively developed are the Burdekin Delta (Ayr-Home Hill Area), the Pioneer Valley, Callide Valley, Lower Burnett (Bundaberg Area), Lockyer Valley and Redland Bay. Similar development is taking place in other areas such as parts of the Darling Downs.

Furrow irrigation is used for cotton, sugar cane, most tobacco and some other crops. Spray irrigation is adopted to a considerable extent for fruit, vegetables, fodder crops and a small part of the tobacco. Spraying is well suited to the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Use of the border check method in the irrigation of pasture and fodder crops has proved successful and its use is increasing.

The following table shows for each division of the State the number of irrigators and the areas irrigated for the year ended 31st March, 1959.

AREA OF LAND IRRIGATED: QUEENSLAND, 1958-59.

Division.	No. of Irrigators.	Area Irrigated (Acres).							
		Vegetables.	Fruit.	Sugar-cane.	To-bacco.	Cotton.	Other Crops.	Pastures.	Total.
Southern Queensland ..	5,040	21,523	3,943	16,322	2,024	339	31,461	7,326	82,938
Central Queensland ..	535	901	217	18	9	978	5,124	1,493	8,740
Northern Queensland ..	1,574	4,173	716	49,273	5,457	203	1,550	1,583	62,955
Total	7,149	26,597	4,876	65,613	7,490	1,520	38,135	10,402	154,633

The pattern of irrigation in Queensland is unlike that in southern States; the more important developments in tropical and sub-tropical areas are therefore discussed briefly in the sub-sections following. It should be noted that the spring to autumn "irrigation season" of the temperate southern irrigated lands is not applicable, and that round-the-year irrigation is required throughout most of the State, the timing and duration of the summer "wet" season being too variable to enable a definite non-irrigation season to be fixed.

(ii) *Lockyer Valley.* West of Brisbane and within 30 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation. Despite a mean annual rainfall of 30 inches, the variation is great, and irrigation is necessary for continuous agricultural production. Surveys suggest that some 60,000 acres of land highly suitable for irrigation are available. Of this area, only about 30 per cent. is under irrigation, the number of pumps operating from wells and open water exceeding 550 and 600 respectively. Over 60 per cent. of the farmers operate electric pumps for irrigation purposes and a special policy designed to encourage such development is fostered by the Southern Electric Authority of Queensland. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,370 acre feet. These also tend to augment and conserve underground supplies. The Irrigation Research Station established at Gatton has been converted to a Regional Experimental Farm under the control of the Department of Agriculture and Stock.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(iii) *Burdekin River.* The Burdekin River, which enters the sea between Townsville and Bowen, is a major factor in the life of North Queensland. In most years, heavy floods from a catchment twice the size of Tasmania cause extensive damage and traffic disruptions. On the other hand, the fertile delta area, with its underground water supplies at shallow depth, has contributed greatly to the agricultural prosperity of North Queensland. Present development is confined to the delta area. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently sugar growers and other farmers have tapped the underground water resources of the delta to obtain supplies in the dry periods. Sugar is the main irrigated crop, though citrus fruits, pineapples, vegetables and tobacco are also irrigated. The irrigated area is in excess of 30,000 acres, up to 1,000 acre feet of water being drawn daily from underground sources.

In the Home Hill-Inkerman areas on the south side of the Burdekin, water is obtained from shallow wells by electric pumps supplied from a local power station controlled by the Townsville Regional Electricity Board. Around Ayr, on the north side of the river, electric power from the mains of the Townsville Regional Electricity Board is now being used in place of individual internal combustion engines. At both Home Hill and Ayr, water for domestic supply is raised by a windmill on each property.

In 1940, the Burdekin River Trust was formed to safeguard the sugar areas of the Delta from erosion and floods. An irrigation research station studies the development of pastures and irrigated crops under local conditions.

A major multi-purpose scheme, involving irrigation, flood control and hydro-electric power generation, is being investigated by the various interested government departments under the general supervision of the Burdekin River Authority. The development envisaged includes a dam storing 6,584,000 acre feet, which would make water available for the irrigation of at least 250,000 acres. The principal industries anticipated are tobacco-growing, dairying, and cattle-fattening, with sorghum, sunflowers, peanuts, cotton and sugarcane as other possible forms of production. The projected scheme will change the Burdekin from a mixed blessing to one of the Commonwealth's greatest resources for agricultural and industrial production.

The Clare Irrigation Area, constituted in 1949, the Millaroo Irrigation Area, constituted in 1952, and the Dalbeg Irrigation Area, constituted in 1953, are at present predominantly used for tobacco production. Located from 25 to 65 miles upstream from the mouth of the Burdekin, these areas comprise 12,000 acres and obtain irrigation waters from central pumping stations drawing initially on the unregulated flow of the Burdekin. A temporary storage of 6,700 acre feet capacity has been constructed about 79 miles upstream from the mouth of the Burdekin. At 30th June, 1959, 146 farms were occupied and total production for 1958-59 was valued at £795,000.

(iv) *Dawson Valley.* The Dawson River, a 392-mile long tributary of the Fitzroy River, rises in the Carnarvon Range and joins the Mackenzie River to form the Fitzroy 50 miles west of Rockhampton. Lands bordering the river in its northerly course of about 170 miles before its confluence with the Mackenzie River are commonly termed

the Dawson Valley. A scheme for the development of the Dawson Valley providing for the irrigation of 70,000 acres was inaugurated in 1923. Storage for the scheme was to be provided by a dam of 2,500,000 acre feet capacity at Nathan Gorge. Much investigational and survey work on the scheme was carried out, but the general financial depression and limited loan funds brought about the cessation of this work. However, the initial step in construction had been completed, comprising a weir on the river at Theodore and irrigation works to serve an area of 3,500 acres supplied from a central pumping station. Two additional weirs have since been built, giving a total storage of 10,280 acre feet. Pasture, vegetables, cotton, fruit and dairy products are the principal produce. Attention has recently been given to the former plans for the valley and earlier work is now under close scrutiny as a prelude to future development. Construction of works to serve some 2,400 acres at Gibber Gunyah, adjacent to the existing Theodore Area, has been completed and 19 farms have been occupied.

(v) *Mareeba-Dimbulah Area.* The existence of large areas of sandy soils suitable for tobacco production in the valleys of the Walsh and Barron Rivers in the neighbourhood of Mareeba and Dimbulah has led to large-scale investigations into possible irrigation development in the area. Surveys indicate that 40,000 acres of land suitable for irrigated culture, including 32,000 acres suitable for tobacco, are available. In 1958-59, some 4,116 acres of high-grade tobacco were grown. Seven weirs with a combined capacity of 2,650 acre feet have been completed on a number of streams to store water for irrigation.

During 1952, a report on the utilization of waters of the Barron and Walsh Rivers was prepared and the establishment of an irrigation undertaking approved by the Queensland Government. The projected undertaking provides for construction of a major storage at Tinaroo Falls on the Barron River to store 320,000 acre feet, and construction of irrigation works to serve 78,000 acres commanded by this storage. In each case, construction has commenced. Further development by construction of a second storage at Nullinga on the Walsh River has been deferred for the present. Tobacco will be the basic crop while peanuts, vegetables, maize, cotton and stock fattening also appear suitable.

(vi) *Border Rivers Project.* The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of the Dumaresq-Barwon Border Rivers Commission on which each State is represented. For information on the project see page 248.

(vii) *Balonne River.* The St. George Irrigation Area has been constituted and construction of works to serve some 11,000 acres is in progress. Water supply for the area will be obtained by pumping from the combined weir and road bridge on the Balonne River at St. George.

6. *Channel Country.*—Extensive investigations have been made of the Channel Country fed by inland rivers in the south-western corner of the State. This country is intersected by shallow and irregular flood channels through which huge volumes of flood waters pass in favourable seasons; consequent on the flooding, a heavy growth of natural pastures is produced on the flooded lands, providing feed in quantities far in excess of that required for the normal stock population of the area. If the occurrence of flooding could be made more reliable by means of storages to create artificial floods, the pastoral resources of the area would be enormous. However, inquiries directed on these lines have revealed that little can be done to increase or stabilize the turn-off of fat cattle by artificial storage.

At 30th June, 1952, 41 watering facilities, at an estimated cost of £277,000, had been proposed under a Commonwealth-State agreement for stock routes through, and in the approaches to, the Channel Country. By 30th June, 1959, 31 had been completed, while four sub-artesian bores and one excavated tank were under construction.

7. *Hydro-electricity.*—An outline of Hydro-electricity Schemes operating in Queensland is given in the previous chapter (see page 230).

§ 5. South Australia.

1. *General.*—(i) *Rainfall.* Brief particulars of the climatic conditions in South Australia are given on page 1129 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.)

(ii) *Administration.* Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act provides for the construction of storages in non-reticulated areas and authorizes the Minister to "divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under, or on, any land entered upon for the purpose of supplying water to the inhabitants of any water district".

(iii) *Methods of Catchment and Conservation.* Early in the history of the State the rights to all running streams, springs and "soaks" were vested in the Crown. The Water Conservation Act was passed in 1886 and, up to 30th June, 1959, more than 550 dams, tanks and "rainsheds" had been built or acquired by the State, in addition to 460 wells and 340 bores, at a total cost of £1,759,395. The "rainsheds" comprise timber frameworks roofed with galvanized iron to catch precipitation which is delivered to storage tanks and is available for surrounding settlers and travellers. Rainshed catchments vary from a few hundred square feet to four acres, discharging into tanks ranging from 2,000 to 500,000 gallons. Over most of the State, extraordinary precautions are taken to counteract evaporation. Pipelines in preference to open channels and covered storages are used to reduce evaporation. Meters are attached to practically all services to check usage by individual consumers.

2. *Irrigation.*—In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped on to the land or gravitated from the river. The upper Murray of South Australia and the Mildura area of Victoria formed the cradle of Australian irrigation. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. Including land allotted for War Service Land Settlement purposes, the Department of Lands administers in the Murray Valley an area of 32,758 acres of irrigable high land together with 9,449 acres of reclaimed swamp and 167,175 acres of non-irrigable land in the irrigation areas and 29,747 acres of land temporarily leased and reserved for commonage or other purposes, amounting in all to 239,129 acres. In addition, the Renmark Irrigation Trust controls 20,557 acres, of which 9,550 are irrigated. Water used for irrigation purposes in 1958–59 in the high land irrigation areas controlled by the Department of Lands, excluding War Service Land Settlement areas in course of development, was approximately 100,000 acre feet and, in addition, approximately 63,000 acre feet were applied to the reclaimed areas. In the Renmark area, approximately 29,000 acre feet of water were used for irrigation in 1958–59. The production of the upper Murray areas is almost exclusively fruit and vines. Principal crops are sultanas, currants, lexias, apricots, peaches, nectarines, pears and figs (mainly for dried fruit), wine grapes, and citrus fruits. Before irrigation, these semi-arid lands were of little productive value.

Renmark Irrigation Trust is administered by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold, self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 100 miles of channel for reticulation to 9,550 acres.

The following tables show the acreage devoted to various crops in the government-controlled and Renmark Irrigation Trust areas on the upper Murray, and in the government-controlled reclaimed swamp districts near the mouth of the Murray, which are devoted to dairying.

AREA OF LAND UNDER IRRIGATED CULTURE, 1958-59.

3. Water Supply Schemes.—(i) *Adelaide Metropolitan Water Supply.* Adelaide derives its water from five reservoirs in the nearby Mount Lofty Ranges, and by means of pumping stations and a pipeline from the River Murray at Mannum. The reservoirs have a storage capacity of 51,497 acre feet and the pipeline a capacity of 53,627 acre feet a year. The consumption for the year 1958-59 was 80,476 acre feet, equivalent to a consumption of 108 imperial gallons per head per day. The capital cost to 30th June, 1959, was £29,936,090.

(ii) *Country Reticulated Supplies.* Areas extending to a distance of 90 miles north of Adelaide are supplied from the Warren, Barossa, and South Para Reservoirs (36,290 acre feet) in the Barossa Ranges. To supplement these storages, a branch main from the Mannum-Adelaide Pipeline feeds into Warren Reservoir.

Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, with connexions to the Warren system and the Morgan-Whyalla Pipeline. The 223-mile pipeline from Morgan on the River Murray to Whyalla was designed to deliver annually 4,400 acre feet to Whyalla and 3,300 acre feet to the northern districts. Branch pipelines have been constructed to Jamestown, Caltowie, Peterborough, Clare and Woomera. Yorke Peninsula is now being reticulated. A pipeline has been laid from the Bundaleer Reservoir, and the reticulation system will be extended south to Edithburgh. Work is in progress on the construction of the Myponga Reservoir. A concrete arch dam is being built on the Myponga River, impounding 22,000 acre feet of water. This storage will be used to supply towns and country lands south to Normanville and as an additional source of supply for the Adelaide Metropolitan area.

Water conservation and distribution works in country districts have cost £31,203,396 (exclusive of river control and irrigation works on the River Murray) and contain 6,349 miles of water mains. The capacity of country storages is 71,569 acre feet, serving a population of approximately 306,500.

4. *Underground Water.*—The occupied portion of South Australia is, on the whole, well endowed with underground water and the extent of the several artesian basins is reasonably well known. There are also considerable areas, notably in the south-east of the State, in which ground water occurs. Quality varies widely, but a great deal is at least useful for watering stock and this is the major use to which it is put.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are high in proportion to the carrying capacity of the arid land. However, deep boreholes have been drilled by the government to provide watering places along stock routes, and pastoralists rely largely on supplies from non-pressure aquifers at shallower depths. Marree township is supplied from this source, its deepest bore being 575 feet.

The use of the waters of the Murray Basin is essential to settlement in the Murray Mallee country and in the south-east of the State, especially for farms and township supplies to Mount Gambier, Naracoorte, Bordertown, Pinnaroo, Penola, Lamerook, Coonalpyn, Nangwarry, Mount Burr, Kingston (S.E.), Parilla and Karoonda. The deepest bore in this Basin is 1,805 feet. Towns elsewhere which are supplied from bores include Mount Barker, Port Lincoln, Peterborough, Warooka and Willunga.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, for which the Government maintains about 30 drills. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne and considerable tracts of previously undeveloped country in the Upper South-east, Kangaroo Island and Yorke Peninsula have been found to have usable water and are now being opened up.

Ground water resources surveys are undertaken continually by departmental geologists, the results being published in various bulletins and reports issued from time to time. The *Groundwater Handbook* published in 1959 by the Department of Mines provides a comprehensive detailed review of the State's ground water resources.

5. *Farm Water Schemes.*—While the Department of Mines and the Engineering and Water Supply Department give assistance to individual farmers in the provision of supplies from underground sources, a great part of the farming areas obtains water supply under pressure from the extensive distribution systems connected to various reservoirs or the Murray River.

6. *South-Eastern Drainage.*—Nature has played an ironic prank in the south-east of South Australia where it has been necessary to construct costly drainage schemes to dispose of surplus water. The area comprises a series of valleys or flats separated by low ranges parallel to the coastline which prevent natural drainage. The highest "range" is approximately 50 feet above the adjacent flat and the most easterly flat, some 50 miles from the coast, is 200 feet above sea level. The ranges are generally of poor soil or stony but the flats are fertile.

The Millicent Drainage System was completed in 1885, when 100,000 acres were reclaimed by 225 miles of drains at a cost of £150,000, which was included in the land allotment prices.

The South-Eastern Drainage Area System, which is controlled by the South-Eastern Drainage Board, comprises drains constructed by the Government at national cost, plus those undertaken by the Government in co-operation with the landholders.

The area is bounded on the east by the State Boundary, and on the west by the sea coast. It extends from about 20 miles north of Kingston southerly to near Millicent and Kalangadoo. Up to 1948, about 430 miles of drains had been provided at a cost of £720,876. These were of a developmental nature intended more to promote the rapid removal of floodwaters than to provide a complete system of drainage. Since 1948, the complete drainage of the Biscuit, Reedy Creek and Avenue Flats in the Western Division has been in progress. The southern section of 260,000 acres, involving an excavation of 8,100,000 cubic yards has been completed, and a start has been made on the northern section of 140,000 acres.

The capital cost of drainage in the South-Eastern Drainage Area System at 30th June, 1959, was £4,564,951, and the length of drains constructed was 666 miles.

§ 6. Western Australia.

1. General.—(i) *Rainfall.* Brief particulars of the climatic conditions in Western Australia are given on page 1133 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.)

(ii) *Administration.* Natural water rights in the State, with few exceptions, are vested in the Crown. Irrigation districts are administered by the Minister for Water Supply, Sewerage and Drainage under the Rights in Water and Irrigation Act 1914–1951, and he is advised by an Irrigation Commission representing the local irrigationists and governmental technical and financial branches. Water supplies in country areas in Western Australia coming under the provisions of the Water Boards Act 1904–1954, and the Country Areas Water Supply Act 1947–1957 are controlled either by the local authority or by the Water Supply, Sewerage and Drainage Department. Those controlled by the Department (except for some local water supplies to country towns still under the provisions of the Water Boards Act) form the Country Areas Water Supply, consisting of the Goldfields and Agricultural Water Supply, the Great Southern Towns Water Supply and local water supplies to country towns and districts. The Department also controls individual water supplies serving isolated mines, stock routes, and agricultural areas.

2. *Irrigation.*—(i) *South-West.* The main irrigation areas are situated along the South-Western Railway between the towns of Waroona (70 miles from Perth) and Dardanup (116 miles from Perth).

The Water Supply, Sewerage and Drainage Department controls three irrigation districts—Waroona, Harvey and Collie River—the total area irrigated in these districts during 1958–59 being 25,252 acres and the total water used approximately 90,000 acre feet. The total of acre waterings (that is, the number of acres watered multiplied by the average number of waterings) was 148,632. Investigations are being carried out with a view to irrigating a further 30,000 acres south of the Collie River Irrigation District.

The Waroona Irrigation District (10,397 acres) is supplied from Drakes Brook Dam (1,854 acre feet capacity) and Samson Brook Dam (6,624 acre feet), the Harvey Irrigation District (37,269 acres) from the Harvey Weir (8,370 acre feet) and Stirling Dam (46,368 acre feet), and the Collie River Irrigation District (36,020 acres) from the Wellington Dam (29,440 acre feet).

The following table, which shows acre waterings supplied to crops in the irrigation districts of Harvey, Waroona and Collie River during the seasons 1954–55 to 1958–59 illustrates the general growth of these irrigation schemes.

IRRIGATION, WESTERN AUSTRALIA: ACRE WATERINGS(a).

Year.	Pasture.	Fodder.	Potatoes.	Vegetables.	Orchard.	Flax, Broom Millet, and Preparation of Ground.	All Crops.
1954–55	112,659	3,268	2,363	3,294	845	121	122,550
1955–56	108,468	3,599	1,834	3,452	946	127	118,426
1956–57	129,502	3,757	3,995	3,317	1,024	119	141,714
1957–58	133,634	5,384	3,299	2,947	972	..	146,236
1958–59	136,940	6,324	1,858	2,495	1,014	1	148,632

(a) Number of acres watered multiplied by average number of waterings.

(ii) *General.* In 1958–59, the total area irrigated in Western Australia was 44,102 acres made up of vegetables (8,211 acres), fruit (6,850 acres), vineyards (630 acres), pastures (24,982 acres) and other crops (3,429 acres).

An area of approximately 650 acres of Gascoyne River flats adjacent to Carnarvon is under irrigated cultivation. The principal crops are bananas and beans but others such as tomatoes are also grown. For this agriculture, some 130 acre feet of water a week are drawn from river underflow.

On the Liveringa flood plain, 65 miles south east of Derby, commercial production of rice has been achieved following successful experimental work. Irrigation water from the Fitzroy River is diverted through Uralla Creek, an anabranch, for 25 miles to the rice growing area where a natural storage of approximately 1,200 acre feet exists. During periods of low flow in the Fitzroy River, the supply of water is augmented by pumping.

The Ord River in the Kimberley Division of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 inches in the north. The hottest months (December to March) are also the months of highest rainfall. Communications and population are sparse. The Western Australian Government is considering a proposal to build a dam to conserve 3,000,000 acre feet of water, equipped with a hydro-electric plant, which might supply water for an area of some 200,000 acres agriculturally and topographically suitable for irrigation. Investigations show that the climate and soil conditions are suitable for sugar cane, rice, cotton, safflower and various oil seeds. The economic production of these and other crops, as well as the possible use of such irrigation areas for fattening of cattle, is being examined at the Kimberley Research Station on the Ord River.

3. *Water Supply Schemes.*—(i) *Metropolitan.* Particulars relating to the Metropolitan Water Supply are given in § 5 of Chapter XIX., Local Government.

(ii) *Goldfields and Agricultural Water Supply.* Western Australia has one of Australia's most spectacular water supply schemes, and a brief account of its development will be found on page 1134 of Official Year Book No. 37. Mundaring Reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the Eastern Goldfields and has a capacity of 62,560 acre feet and a catchment of 569 square miles. The water passes through 346 miles of main, mostly steel and 30 inches in diameter, equipped with eight pumping stations.

Maximum pumping capacity from No. 1 Pumping Station at Mundaring Reservoir is nominally 15.9 million gallons a day. The total capacity of all receiving, regulating, standby and service tanks along the main pipe line is 154 million gallons which includes three standby reservoirs at Kalgoorlie having a combined capacity of 60 million gallons.

Hundreds of miles of branch pipe lines have been laid to mining areas, agricultural areas and country towns, a notable one being the Norseman extension of 101 miles. The system serves some 74 towns and water is reticulated to over 2,000,000 acres of mixed farming lands. The total length of pipe lines is 2,756 miles and the number of services is 21,799. The total quantity of water pumped from Mundaring in 1958–59 was 3,002 million gallons. The total cost of the scheme to the State Government to the end of 1958–59 was £11,856,953. Under the terms of the Comprehensive Water Supply Scheme the Commonwealth Government has contributed a further £2,196,486 making a total cost of £14,053,439.

District water supply schemes established for the purpose of supplying certain country towns and mixed farming lands have been absorbed into the Goldfields and Agricultural Water Supply Scheme. For further particulars see Official Year Book No. 37, page 1135.

(iii) *Comprehensive Water Supply Scheme.* A comprehensive water supply scheme to supplement water supplies to the goldfields, agricultural areas, and country towns, authorized in 1947 as a joint work between the Commonwealth and State and estimated to cost £10,000,000 is at present (1959) under construction in two main parts. The northern section is an enlargement and extension of the Goldfields and Agricultural Water Supply. The southern section is the Great Southern Towns Water Supply. Linked with Wellington Dam (initially an irrigation work on the Collie River) by 80 miles of 30-inch diameter pipe through three pumping stations to Narrogin, it now supplements the existing water supplies to country towns along the Great Southern Railway, north to Brookton and south to Katanning. The raising of the impounding wall of Wellington Dam to increase its storage to about 150,000 acre feet is in progress. Expenditure on the Scheme to 30th June, 1958, amounted to £6,618,037.

(iv) *Local Water Supplies.* Local schemes other than above comprise those in the remaining agricultural and mining areas, including the North-West and Kimberley Divisions. Sixty-two separate reticulated water supplies serve country towns and districts. Of these, 55 are controlled by the Water Supply, Sewerage and Drainage Department and the remainder by local authorities.

(v) *Commonwealth and State Government Railways.* Railways of the Commonwealth and State Governments make independent provision for supplies of water for their own purposes, although considerable additional quantities are consumed by the Railways from other sources, e.g., Public Works and Metropolitan Water Supply Departments.

(vi) *Catchments.* The water supplies to these country schemes come from stream flow, dams, tanks, wells and bores.

A total of 66 rated stream gauging stations is operating in the South-West and Kimberley Divisions. Three types of catchment peculiar to this State developed in connexion with local water supplies and deserving special mention are:—rock catchments, which consist of mostly clear granite out-cropping rock, from which the overall run-off from rain amounts to approximately 40 per cent.; bituminous catchments, which are areas which have been sealed with emulsified bitumen—some hundreds of acres have been so treated and yield a run-off of approximately 80 per cent. of the rainfall; and roaded catchments, where selected areas of a catchment are cleared, graded and formed into roads to assist in obtaining additional rainfall run-off.

4. *Underground Water.*—Individual farmers, orchardists, market gardeners and others pump ground water from wells and bores, using windmills, engines or electric power. Water is also obtained from artesian and sub-artesian bores. The Public Works Department hires out to local authorities boring plants which are then hired out to farmers to assist their boring operations. In addition, the department operates its own boring plants and contracts with private firms in connexion with water supply works.

Considerable advances in the knowledge of aquifers and quality of water in the main sedimentary basins have been made as a result of the extensive geological surveys in connexion with oil exploration during the past ten years and most of these results are now in the course of publication. In view of the importance of finding water for towns and farms in low rainfall areas outside the sedimentary basins, the Geological Survey of Western Australia and the Commonwealth Bureau of Mineral Resources recently combined to apply geophysical prospecting to the search for water in weathered granites in the south-western part of the State. The results of this work so far have been promising.

§ 7. Tasmania.

1. *General.*—(i) *Rainfall.* Brief particulars of the rainfall pattern in Tasmania are given on page 1136 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.)

(ii) *Main Purposes of Conservation and Utilization.* Owing to Tasmania's fortunate rainfall position, scarcity of water is not a serious problem in normal seasons. Conservation of water for hydro-electric generation is the predominant interest, and conservation for domestic and industrial purposes is more important than irrigation. Conservation of water on farms is not practised to the same extent as on the mainland, probably because running streams and good rainfall are on a more generous scale. Provision of artificial storages (apart from house tanks) is rare, but progressive landowners are beginning to take advantage of modern plant, such as bulldozers, to provide small excavated storages on their properties. Underground water is of poor quality but a small quantity, which has been exploited to a limited extent by bores and windmills, exists over an area in the Midlands. Geological conditions do not appear to favour the utilization of underground water except on a minor scale.

(iii) *Administration.* On 1st September, 1958, a Rivers and Water Supply Commission was brought into operation with control over all natural waters. The Commission does not own the waters but may take them subject to existing rights, of which the most important are riparian rights. In addition to licensing the use of water, the Commission supervises

the construction of municipal water supply schemes which was previously a function of the Water, Sewerage and Drainage Board. It has similar functions in relation to river improvement and irrigation.

2. Hydro-electricity.*—Tasmania depends entirely on water for power development. The Hydro Electric Commission, the authority controlling the generation of electricity in Tasmania, conducts a continuous survey of the water power resources of the State assisted by modern methods such as aerial photography and geophysical exploration.

Much of the water potential is located on the Central Plateau with an area of about 1,500 square miles at an altitude of from 2,000 to 4,000 feet and subject to rainfall of from 30 inches a year in the east to 80 inches on the western perimeter. On the plateau are a large number of lakes which provide the means for storage at low cost. These include Great Lake with an area of 58 square miles, Lake St. Clair and Lake Echo each more than 12 square miles, and others of smaller area.

The Derwent River and its tributaries which flow south-easterly carry off by far the greater part of the water which falls on the plateau and these rivers are therefore the most abundant source of power. They have been the cheapest to develop to date and most of the existing generating stations are located on them.

The three main rivers running westerly from the plateau—the Arthur, Pieman and Gordon—have only a small portion of their catchment areas at high level, but they run through regions of high rainfall and their power potentials are considerable. However, because of inaccessibility and climate, development of these rivers may be rather expensive and has been deferred so far in favour of more convenient schemes.

Rivers draining from the plateau towards the north and north-west coast, including the Emu, Forth and Mersey, have small catchments at high levels and no natural storages.

Two other important water power sources, independent of the Central Plateau, are the South Esk River in the north and the Huon River in the south. A power station at Trevallyn, near Launceston, utilizes water from the South Esk. The Huon has a large low-level catchment in the high-rainfall area near the west coast. Storage could be provided on this river at a reasonable cost and, because of its proximity to Hobart, a future power station would have considerable value for peak load development.

3. Industrial.—Three principal industrial schemes have been installed privately. Australian Newsprint Mills Ltd. pump approximately six million gallons a day from the Derwent River at Lawitta for the Boyer Mills. Associated Pulp and Paper Mills Ltd. pump several million gallons a day from the Emu River at Burnie, and Titan Products Pty. Ltd. reticulate water from Chasm Creek to their factory at Heybridge. In addition, the State has constructed a regional water scheme to serve the Australian Aluminium Production Commission's plant at Bell Bay on the River Tamar and to supply several municipalities with bulk water for domestic and industrial purposes.

A second regional water scheme draws water from the River Derwent at Lawitta to provide domestic and industrial supplies in five southern municipalities. Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State which is largely unsettled. Diversion to the eastern side of the watersheds is not regarded as practicable.

4. Irrigation.—There are no State irrigation projects at present, but the Rivers and Water Supply Commission is investigating the possibility of establishing a scheme in the Coal Valley. Preliminary investigations have also been made in the Jordan Valley. The Water Act 1957 provides for irrigation works to be undertaken by municipalities and by Trusts constituted for the purpose, but no such works have been undertaken to date. All systems operating are privately owned, and with one exception (at Bushy Park) are single-farm units. At Bushy Park, a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder comprises areas devoted to vegetables and served by municipal water supplies. Irrigation in Tasmania was applied in 1958–59 to 13,431 acres devoted to: hops (1,292 acres); fruit (1,737 acres); pastures (7,502 acres); green fodder, etc. (782 acres); and other crops (2,118 acres).

* See also Chapter VII.—Electric Power Generation and Distribution, p. 235.

§ 8. Northern Territory.

1. **Climate and Topography.**—Some particulars of the climate and main topographical features of the Northern Territory are given on page 1138 of Official Year Book No. 37 and in this issue information on climatic conditions will be found in Chapter II.—Physiography, and a brief outline of contour and physical characteristics in Chapter V.—The Territories of Australia.

2. **Administration.**—Under the Control of Waters Ordinance 1938-1959 of the Northern Territory, natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under prescribed conditions. There is a Water Use Branch in the Northern Territory Administration under the control of a Director. The functions of the Branch include systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies, flood prevention and control.

3. **Underground Water.**—The marked seasonal rainfall over the whole of the Northern Territory is one of the basic factors affecting the pastoral industry which provides the bulk of the Territory's income. The inadequacy of surface water during the dry season underlines the importance of underground water supplies in the Territory where most of the cattle population is dependent on underground supplies for three to five months each year.

Rainfall is one of the factors controlling cattle population but geological features, controlling both soils and the storage of underground water, are even more important. In the northern-most portion of the Territory, which receives from 25 to 60 inches of seasonal rainfall a year, surface water supplies are, in general, adequate for the pastoral industry. Despite this, however, this area has a comparatively low carrying capacity for cattle and the pastoral industry is concentrated more in inland areas where feed retains more nutritive value in the winter despite dry conditions.

South from this well-watered northern-most portion, the Territory becomes progressively drier, with an annual average rainfall of only five inches at the margins of the Simpson Desert in the south-east corner. In the lighter rainfall areas, the search for potable underground water becomes exacting but, in general, the regions providing the best pastures—the Ord-Victoria Region, the Barkly Tablelands and smaller areas in the Alice Springs district—provide also sub-surface conditions suitable for the storage of water. This comes about largely because, in these areas, both pasture and water are related to flat lying or gently folded limestones or volcanics of Upper Proterozoic or Cambrian age, overlying the basement of older, more tightly folded, metamorphic rocks and granites which crop out over wide areas within the Territory.

In the Ord-Victoria Region, the best grass lands overlie volcanic rocks and extend over some 10,000 square miles. Ground water is obtained in shallow bores averaging 70 to 80 feet in depth and producing small supplies which range up to 1,500 gallons an hour. For the most part, water is stored in joints, faults or cracks in the rocks although in places sub-artesian conditions pertain and, on the whole, selection of bore sites is difficult. There are also small sedimentary basins in the region, some of which yield sub-artesian, and in places, artesian water and provide areas of good pastures.

The Barkly Tablelands, which extend into Western Queensland, overlie flat-lying limestone, sandstone and shale of the Barkly Basin. In most places, underground water is under pressure (sub-artesian) but no flowing bores are known. Sandstones and beds of limestone with fractures and solution cavities provide a number of aquifers within the Basin. The hydraulic surface (to which pressure water will rise in bores) ranges between 500 and 600 feet above sea level and adequate supplies for the watering of stock are available at depths ranging from 150 to 400 feet from the surface. The water from over 90 per cent. of the bores is suitable for stock and over 50 per cent. of it is suitable for human consumption. Investigations by the Commonwealth Bureau of Mineral Resources indicate that underground water supplies will be more than sufficient for the future development of the pastoral industry on the Tablelands.

Considerable research has been undertaken in the last three years into increasing the Alice Springs water supply from alluvial basins and provision of a water supply for the mining town of Tennant Creek from the Cabbage Gum Basin, a small basin in deeply weathered Precambrian rocks, 15 miles south of the town.

Similar basins to the Cabbage Gum probably occur in the Territory, south of Alice Springs. If present tests of the Cabbage Gum Basin are successful, it is possible that greater supplies of water than previously expected may be discovered in this area.

A review is being made of the information available concerning the number of bores and wells sunk in the Territory. Up to September, 1959, 1,871 bores and wells had been registered. Of these, 883 were on pastoral properties, 47 on native reserves, 13 for town water supplies and six on mining fields. The number of registered stock route bores established by the Government is 176.

4. **Irrigation.**—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Some water is drawn from the rising main between Manton Dam and Darwin for irrigation purposes, but the trend is for properties in this area to develop their own water supplies, either by boring or by pumping from watercourses or lakes. Investigations for a further dam site to augment Darwin's water supply and to provide reticulated water to properties without natural waters are expected in the near future. Hydrological investigations are being carried out by the Administration and a public company to determine the supply of water and the best methods of control and use in the potential rice-growing areas of the Territory. A total of 86 gauging stations has been established in the Territory. They are of various types, namely long-term automatic, short-term automatic, staff gauge-daily readings, and staff gauge-intermittent readings, of which 24 are associated with proposed rice growing areas. The remaining gauging stations have been located to assess the river water potential of the Territory. A further 70 stations are planned for installation over the next two years. Agricultural activity in the Territory is not extensive, being confined to the Darwin, Adelaide River, Coomalie Creek, Daly River, Katherine River and Alice Springs areas with only small acreages being utilized.

The Katherine River appears to offer irrigation potentialities on the level soil below the township. Approximately 14 properties in and around Katherine are at present drawing water from the Katherine River for irrigation purposes, vegetables and pastures being the usual crops grown. The Katherine River passes through a gorge upstream of the town under conditions which appear suitable for dam construction. The Administration and the Commonwealth Scientific and Industrial Research Organization are investigating the potentialities of the Katherine area for agricultural production. The Administration is preparing a programme of extension work into saline water conversion under Territory conditions. For further particulars, *see* page 1138 of Official Year Book No. 37.

§ 9. Papua and New Guinea.

1. **Rainfall.**—Rainfall in Papua and New Guinea varies considerably from approximately 250 inches near Lindenhafen (New Britain) and 231 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua).

2. **General.**—For a general description of these territories *see* Chapter V.—The Territories of Australia, page 129, of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet. However, complete data regarding water resources are not available.

The largest rivers in the Territory include the Fly (a description of which is given in Chapter XXVI. of Year Book No. 40), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles) and the Markham (110 miles).

The main water conservation interest in New Guinea at present is the hydro-electric potential which is extensive. An outline of schemes at present in operation is given in the previous chapter.

CHAPTER VIII.

WATER CONSERVATION AND IRRIGATION.

A. RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS.

§ 1. Introduction.

Official Year Book No. 37, pages 1096-1141, contained a special article "The Conservation and Use of Water in Australia" prepared by Mr. Ulrich Ellis of Canberra. In subsequent issues, much of Mr. Ellis's article of a statistical nature has been advanced, as has the general information on the more important developments in this field, but for details of general, descriptive and historical matter reference should be made to the original article. Appended to the special article, pages 1140-41, was a bibliography of selected books, reports, papers, etc., dealing with the development of the water resources of Australia and their conservation.

For further details on geographical and climatic features determining the Australian water pattern, reference should be made to Chapter II.—Physiography; on water supply and sewerage in metropolitan areas, cities and towns to Chapter XIX.—Local Government; and on the generation of hydro-electric power to Chapter VII.—Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States may be found on pages 259-265 of this Year Book and a map showing the extent of known artesian basins throughout Australia is shown on page 257.

§ 2. Water Resources and their Utilization.

1. **Surface Supplies.**—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. At present, therefore, it is impossible to estimate, with any degree of reliability, the total average annual flow of Australian streams, but it would probably amount to only a small figure in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Nile, 72; Danube, 228; Amazon, 1,780; Volga, 148; Mississippi, 474; and the ten main rivers of the United States of America in the aggregate, 900.

2. **Major Dams and Reservoirs.**—The table below lists existing major dams and reservoirs, together with those under construction and those projected as at June, 1959:—The list is confined to dams and reservoirs with a capacity of 100,000 acre feet or more. There are, in addition, many other dams and reservoirs of smaller capacity in Australia.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA.

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet).	Remarks.
EXISTING DAMS AND RESERVOIRS.				
Eucumbene	Eucumbene River, New South Wales	3,500,000	381	Part of Snowy Mountains Hydro- electric Scheme..
Eildon	Upper Goulburn River, Victoria	2,750,000	250	Storage for irrigation and for the generation of electricity.
Hume	Murray River near Albury	1,800,000	176	Part of Murray River Scheme— storage for domestic, stock and irrigation purposes. Being increased to 2,500,000 acre feet. Hydro-electric power also developed.
Miena	Great Lake, Tas- mania.	(a)984,500	40	Regulates water to Waddamana hydro-electric power station..
Burrinjuck	Murrumbidgee River New South Wales	837,000	264	Storage for irrigation and pro- duction of hydro-electric power
Somerset	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station.
Lake Victoria ..	Murray River, near South Australian border, in New South Wales	551,700	..	Natural storage for irrigation in South Australia. Storage im- proved by construction of embankments and control regulators.

(a) Useful storage only.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued.*

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet).	Remarks.
EXISTING DAMS AND RESERVOIRS— <i>continued.</i>				
Lake Echo ..	Lake Echo, Tas- mania	(a)412,200	60	Storage for Lake Echo and Tun- gatinah hydro-electric power stations.
Waranga ..	Goulburn River, Victoria	333,400	..	Irrigation storage.
Tinaroo Falls ..	Barron River, North Queensland	330,000	133	For irrigation purposes in the Mareeba-Dimbulah area.
Wyangala ..	Lachlan River, New South Wales	303,900	190	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power.
Glenbawn ..	Hunter River, near Scone, New South Wales	293,000	251	Part of Hunter Valley conserva- tion work, for irrigation and flood mitigation.
Rocklands ..	Glenelg River, Vic- toria	272,000	..	Part of Wimmera-Mallee domes- tic and stock water supply system.
Clark ..	Derwent River, Tas- mania	(a)253,400	200	Serves Tarraleah hydro-electric power station.
Avon ..	Avon River, New South Wales	173,800	232	Part of Sydney water supply.
Glenmaggie ..	Gippsland, Victoria	154,300	100	Storage for irrigation.
Lake St. Clair ..	Central Highlands, Tasmania	(a)154,200	..	Improved natural storage for Tarraleah hydro-electric power station.
Lake Brewster ..	Lachlan River, near Hillston, New South Wales	123,900	..	Storage of rural water supplies for the lower Lachlan.
Cairn Curran ..	Loddon River, Vic- toria	120,600	..	Storage for irrigation.
Upper Yarra ..	Yarra River, Victoria	110,000	270	For Melbourne water supply.

DAMS AND RESERVOIRS UNDER CONSTRUCTION.

Menindee Lakes Pro- ject ..	Darling River, near Menindee, New South Wales	2,000,000	..	Part of Darling River water con- servation scheme, for irrigation and possible hydro-electric power generation.
Warragamba ..	Warragamba River, New South Wales	1,694,900	379	For Sydney water supply. Also provides for generation of hydro-electricity and flood mitigation.
Burrendong ..	Macquarie River, near Wellington, New South Wales	1,361,000	240	For rural water supplies, flood mitigation and possible hydro- electric power generation.
Keepit ..	Namoi River, near Gunnedah, New South Wales	345,000	177	For rural water supplies and hydro-electricity generation.
Tantangara ..	Murrumbidgee River, New South Wales	(a)193,000	148	Part of Snowy Mountains Hydro- electric Scheme.
Wellington ..	Collie River, Western Australia	150,000	112	Existing dam is being enlarged for supply of water to irri- gation districts and to agri- cultural areas and towns.
Koomboolumba ..	Tully River, North Queensland	146,000	123	For hydro-electric and possibly irrigation purposes.

DAMS AND RESERVOIRS PROJECTED.

Burdekin Falls ..	Burdekin River, North Queensland	6,584,000	150	For generation of hydro-electric power, irrigation and flood mitigation.
Blowering ..	Tumut River, New South Wales	800,000	250	Part of Snowy diversion scheme, for irrigation and hydro- electric power generation.
Jindabyne ..	Snowy River, New South Wales	560,000	210	Part of Snowy Mountains Hydro- electric Scheme.
Warkworth ..	Wollombi Brook, Hunter Valley, New South Wales	400,000	100	Flood mitigation dam for the Hunter Valley
Arthur Lakes ..	Source of Lake River near Great Lake, Tasmania	(a)339,000	50	Part of Great Lake hydro-electric power development.
Tumut 4 ..	Tumut River, New South Wales	138,000	300	Part of Snowy Mountains-Hydro- electric Scheme.
Tumut 3 ..	Tumut River, New South Wales	120,000	240	Part of Snowy Mountains Hydro- electric Scheme.

(a) Useful storage only.

3. Irrigation.—(i) *History.* For some brief remarks on the history of irrigation in Australia referring to the efforts of the Chaffey brothers and to the Victorian Irrigation Act in 1886 see issues of the Official Year Book prior to No. 39. Trends in irrigation practice in more recent years were described in Official Year Book No. 37, page 1009.

(ii) *Extent and Nature of Irrigated Culture.* About half of Australia's irrigated acreage is in Victoria, and about two-thirds is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In those areas served by the Murray and its tributaries, irrigation water is used extensively for vines, orchards, pastures, fodders, and for domestic and stock purposes. Approximately forty per cent. of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where vegetables, orchards, fodders, and pastures are served. Large scale irrigation schemes have not been developed in Tasmania or the Northern Territory although reference is made on page 282 to investigations at present being carried out in the Northern Territory to determine the availability of irrigation water for rice production.

The following table shows the area of land irrigated in each State during the years 1954-55 to 1958-59:—

AREA OF LAND IRRIGATED.

(Acres.)

Season.	N.S.W. (a)	Vic. (b)	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
1954-55 ..	616,264	863,563	139,414	69,452	36,130	13,761	151	791	1,739,526
1955-56 ..	379,611	634,334	136,019	70,987	37,164	11,499	225	774	1,270,613
1956-57 ..	525,236	855,182	121,672	66,118	38,567	12,110	168	885	1,619,938
1957-58 ..	695,365	1,001,800	160,345	80,853	41,319	15,321 (c)	127	1,396	1,996,526
1958-59 ..	641,361	965,766	154,633	85,081	44,102	13,431 (c)	274	1,224	1,905,872

(b) Source: State Rivers and

Water Supply Commission.

(c) Not available for publication.

(d) Included in Other Crops.

(e) Includes Tobacco, 7,490 acres.

(f) Includes lucerne for both hay and pasture.

(g) Includes

lucerne for pasture.

(h) Incomplete; excludes area of rice irrigated.

(iii) *Research.* Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following:—high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; soil treatments to improve the physical condition of irrigated heavy clay soils; the utilization of irrigated pastures by stock; growth problems affecting plants and trees; the prevention of evaporation from water storages; and the potability of saline waters for stock.

The Commonwealth Scientific and Industrial Research Organization maintains the following research stations:—Merbein (Victoria)—horticultural problems, particularly of the dried vine fruits industry; Griffith (New South Wales)—the influence of irrigation on plant life (using horticultural trees as test plants), irrigation methods, land drainage and soil structure; Deniliquin (New South Wales)—irrigated pastures; and the Kimberley Research Station (Western Australia)—tropical crops and pastures. In the maintenance of Merbein and Griffith Stations, the Commonwealth is assisted, financially and otherwise, by the New South Wales Water Conservation and Irrigation Commission, by the Dried Fruits Export Control Board and by private organizations.

The Soils Division of the Organization has made detailed surveys of more than a million acres since 1927, with less detailed reconnaissance surveys over many millions of acres. The Division works closely with State authorities. The keynote of soil investigations is relationship between soil and land use, and there is an increasing tendency to seek such surveys before irrigation districts are established. Research is also conducted in the field of water percolation in relation to soil structure.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation Areas. It is representative of the State Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including Extension Groups). Finance is provided by these authorities on an agreed basis. The objectives are:—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

4. Preservation of Catchments.—Since water conservation commences on the catchments, it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years, efforts to counteract soil erosion have been intensified and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

5. Sub-surface Supplies.—(i) *General.* There is no national body in Australia concerned with Commonwealth-wide research into and delineation of underground water resources. However, the Australian Academy of Science, in 1956, instituted a Standing Committee on Hydrology; as a result of discussions by this committee, the Academy, in 1958, recommended the need for such a body. The Commonwealth Government subsequently convened, in 1959, a meeting of interested Government agencies from all States to discuss the need for a permanent Commonwealth and States Conference on Underground Water and the need for the appointment of more Government hydro-geologists. The meeting acknowledged both these needs; its decisions are being considered by the respective Governments.

Although there is no national co-ordinating body, the various States and Territories do maintain Geological Surveys and Water Commissions which are continually extending the knowledge of their own States.

As a result a more or less complete general picture of the available and potential surface water resources exists, but much remains to be done with regard to the location and development of sub-surface supplies (artesian, sub-artesian and ground water), in view of their importance as the basis of settlement over large areas of Australia.

The extent of the artesian basins—particularly the Great Artesian Basin—has been determined fairly accurately while the use of sub-artesian supplies is extensive and more development is possible. The shallower ground-water supplies, however, particularly along alluvial valleys and coastal sandbed areas, have not been investigated or developed to any degree, except in a few localities.

(ii) *Artesian and Sub-artesian Supplies.* Pressure water, variable in quantity and quality, either artesian or sub-artesian, is obtainable in many parts of Australia, the various artesian basins extending over approximately one-third of the continent. A map of Australia showing the extent of the known artesian basins appears on page 257 of this Year Book.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 670,000 square miles, comprising about 430,000 in Queensland, 80,000 in New South Wales, 120,000 in South Australia and 40,000 in the Northern Territory. Of the numerous defined major and minor water-bearing basins in Australia, the following are the principal:—

PRINCIPAL WATER-BEARING BASINS: AUSTRALIA.

Name.	State.	Geological Age of Chief Aquifers.	Approximate Area.	Depth to Pressure Water.
			Square Miles.	Feet.
Great Artesian ..	Queensland, New South Wales, South Australia and Northern Territory	Mesozoic	670,000	Up to 7,000
Desert and Fitzroy Murray ..	Western Australia, Victoria, New South Wales and South Australia	Mesozoic-Palaeozoic Miocene-Oligocene ..	160,000 107,000	100 to 1,500 100 to 900
Eucla	Western Australia, South Australia	Pliocene-Miocene ..	68,000	300 to 2,000
Barkly	Northern Territory, Queensland	Cretaceous, Cambrian and Upper Precambrian	57,000	150 to 1,000
North-west ..	Western Australia	Cretaceous, Permian ..	40,000	230 to 4,000
South-west ..	Western Australia	Recent, Jurassic ..	10,000	200 to 2,500
Pirie-Torrens ..	South Australia ..	Recent, Pleistocene ..	4,000	Up to 600
East Gippsland ..	Victoria ..	Pleistocene-Oligocene	2,500	200 to 1,800
Adelaide ..	South Australia ..	Recent, Oligocene ..	1,100	10 to 850
Basins of Ord-Victoria Region	Northern Territory, Western Australia	Mainly Cambrian and Permian	Unknown	Unknown

More than 3,000 artesian bores have been constructed within the Great Artesian Basin, while the daily free discharge from all bores continuing to flow in Australia has been stated to exceed 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but it is unsuitable for plant life, while in certain areas sub-artesian waters are suitable for all uses including irrigation. In some districts, a considerable amount of irrigation is carried out from shallow ground-water supplies.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, many will not cease, but will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by sandstone outcrops. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or "bore drains" and the careless use of water. (For greater detail on this subject see Official Year Book No. 37, pp. 1103-4.)

(iii) *Ground Water.* Ground water supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes. Two of the most important of these supplies are in New South Wales. The Hunter District Water Board pumps 15 million gallons a day for general use from the Tomago coastal sands near Newcastle and at Botany, Sydney, private industry pumps 5 million gallons a day for its own use from similar sands.

Recent exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day.

§ 3. National and Interstate Aspects.

1. *General.*—As the Commonwealth Constitution makes special reference to water problems, both the Commonwealth and the State Governments have an interest in the control and conservation of water. The main responsibility for control of water resources resides in the individual State governments, but as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following sections.

In the Report on Irrigation, Water Conservation and Land Drainage presented to the Commonwealth Government by the Rural Reconstruction Commission in 1945, national aspects of water conservation and use were emphasized. The report recommended that, to obviate lack of co-ordination, an all-Australian plan having the assent of the various governments be adopted, and that the Commonwealth should endeavour to promote interstate co-operation and co-ordinated development generally.

In 1946, a conference between the Commonwealth and States agreed to revive the Irrigation Production Advisory Committee first established under the authority of the Australian Agricultural Council in 1938. Its functions are:—(a) to prepare for the consideration of the Australian Agricultural Council or any Committee of Ministers appointed by the Council, conclusions formed from investigations to be carried out by Commonwealth and State Officers into the various agricultural industries which it is possible to develop on irrigated lands; (b) to undertake long-term co-ordination of land utilization in irrigable areas served by the River Murray and its tributaries, involving co-ordination of all available lands and the carrying out of such supplementary investigations as may prove necessary.

2. *Murray River Scheme.*—(i) *General.* The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Murrumbidgee (980 miles), the Darling (1,700 miles), and the Goulburn (280 miles). The average annual flow of each of the chief contributory streams is as follows:—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,506,000 acre feet; Murrumbidgee River, 2,280,000 acre feet; Goulburn River (including Broken River), 2,502,000 acre feet; Darling River, 2,224,000 acre feet; and Ovens River, 1,169,000 acre feet. Irrigated production in the River Murray basin is mainly in the form of grapes for wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, fat lambs, poultry, eggs and pigs.

For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia, see issues of the Year Book prior to No. 39. The Agreement provided for the construction of works, the allocation of the water between the three States, and the appointment of a Commission to implement the Agreement. The Commission comprises four Commissioners, representing the Commonwealth and the three States respectively. The Commonwealth representative presides.

(ii) *River Murray Waters Agreement.* Under the Agreement, construction works are carried out by the States (who are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to fill Lake Victoria storage once, and with the aid of water returned from Lake Victoria, to maintain certain specified flows in the lower river varying from 47,000 acre feet a month in the winter months to 134,000 acre feet a month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. These flows are to meet domestic and stock requirements in South Australia, losses of water in lockages and evaporation losses other than in the lakes at the Murray mouth, together with 603,000 acre feet per annum for diversion from the Murray for irrigation in South Australia. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949, see Official Year Book No. 40, page 1065, and earlier issues.

At a conference of Ministers held in July, 1949, to consider the diversion of the Snowy River, it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 440,000 acre feet per annum would be added to the Murray River (see para. 4, Snowy Mountains Hydro-electric Scheme, p. 248) and that a storage of not less

than 1,500,000 acre feet should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and found that an increase in capacity of 500,000 acre feet in storage on the Upper Murray River above Albury was the maximum that was economically justifiable for the regulation for irrigation purposes of the waters of the Upper Murray River and of waters added from the Snowy River. The Commission agreed that this increase could best be provided by increasing the size of the Hume Reservoir from its previously designed capacity of 2,000,000 acre feet to 2,500,000 acre feet, but if additional storages for hydro-electric purposes become justified in the future further increases would best be provided at some other site. It subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for this enlargement of the Hume Reservoir to 2,500,000 acre feet. A conference of Ministers considered the recommendation in July, 1954, and agreed to the enlargement. In addition, it was agreed that the Commission should be given power to construct regulators and to carry out such other work on the River Murray between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7th April, 1955. In view of the proposed diversions by the Snowy Mountains Authority to and from the River Murray, and for other reasons, amendments to those sections of the River Murray Waters Agreement dealing with the distribution of the waters of the Murray were considered desirable. Following Ministerial conferences, amendments were ratified by the four Parliaments concerned and came into force on 6th November, 1958.

The estimated quantity (in acre feet) of water diverted during 1958-59 from the Murray and its tributaries for irrigation and other purposes under the River Murray Agreement was as follows:—New South Wales, 2,155,000; Victoria, 2,576,000; South Australia, 260,000; a total of 4,991,000 acre feet.

(iii) *River Murray Works.* One of the major works of the Murray River Scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 33,000 acres. The design comprises a mass concrete spillway and outlet works extending 1,000 feet and an earthen embankment 110 feet high extending for 4,000 feet across the river flats. The length of the total structure is approximately one mile. Work is nearly completed on the enlargement of the reservoir to its approved capacity of 2,500,000 acre feet. The fixed spillway was completed to its final level in May, 1957, and installation of flood gates to raise the level a further 24 feet was completed in September, 1958. The anchoring of the concrete section of the dam to the underlying rock by prestressed cables was still in progress in September, 1959. On completion of this work, the storage may be raised to its approved capacity. In the meantime, the storage can be progressively increased as work proceeds.

The Yarrawonga Diversion Weir was completed in 1939 to raise the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan Junction and the other below the Lachlan Junction.

The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet a second, and will serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet a second, and is designed to serve 270,000 acres. Only a portion of each area will be irrigated.

Adjoining the river in New South Wales and 35 miles from the Murray-Darling Junction, Lake Victoria storage, with a capacity of 551,700 acre feet and a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. Work has recently been completed on the enlargement of the inlet channel to Lake Victoria to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The total capacities of such main storages are: New South Wales—Burrinjuck (Murrumbidgee), 837,000 acre feet; Wyangala (Lachlan), 303,900 acre feet; Victoria—Eildon (Goulburn), 2,750,000 acre feet; Waranga (Goulburn), 333,400 acre feet. More details of these and other State works on Murray tributaries will be found in the sections dealing with State systems. No storages exist on the Murray in South Australia.

3. New South Wales-Queensland Border Rivers Agreement.—The New South Wales-Queensland Border Rivers Agreement came into effect on 1st July, 1947. The Agreement provides for the construction of certain works on those sections of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland, for the furtherance of water conservation; water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Commission to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir in the Macintyre River at Goondiwindi and the existing weir in the Barwon River at Mungindi. The costs of these works and of administration are to be borne by the States in equal shares. The agreement further provides that the water discharged from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

The Water Conservation and Irrigation Commission of New South Wales, which is the constructing authority for the dam, carried out investigations of several dam sites on the Dumaresq River near Mingoola Station homestead, which is approximately 39 miles from Tenterfield. Foundation drilling supplemented by a geophysical survey carried out by the Commonwealth Bureau of Mineral Resources disclosed unfavourable foundation conditions at all sites, the depth of alluvium overlying sound rock exceeding 150 feet in all cases. In an endeavour to obtain more economical storages, investigations were extended to tributary streams and superficially suitable sites have been located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. Exploratory drilling of the tributary sites is now in progress.

The Irrigation and Water Supply Commission of Queensland is the constructing authority for the new weirs and regulators. The construction of Bonshaw and Cunningham Weirs on the Dumaresq River was completed in January, 1953, and June, 1954, respectively.

A weir and regulator is at present under construction on the Barwon River at the offtake of the Boomi River. The construction of a low level weir to establish a pumping pool at Glenarbon on the Dumaresq River was complete at 30th June, 1959, except for the installation of a fish ladder. The existing Goondiwindi and Mungindi Weirs are being maintained; operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed, it is unlikely that any weirs, other than those referred to above, will be required.

The catchments for the border streams (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland) and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that it is necessary to supplement rainfall from April to October by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

4. Snowy Mountains Hydro-electric Scheme.*—Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in

* See also Chapter VII.—Electric Power Generation and Distribution, p. 216. For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX—Miscellaneous, of Official Year Book No. 42.

1947 and 1948, and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament in July, 1949, passed the Snowy Mountains Hydro-electric Power Act setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The Scheme involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. In addition, works required to make use of the waters of the Upper Murrumbidgee, the Upper Tumut, the Upper Tooma and the Geehi Rivers for power generation also provide additional regulation of these streams and this makes more water available for irrigation. Details of the two transmountain diversions and the associated power works together with details of progress and construction are given in Chapter VII.—Electric Power Generation and Distribution.

Commencing in the 1960–61 irrigation season, the Scheme will make available an additional 170,000 acre feet of water each year for irrigation in the Murrumbidgee Valley. During 1963, this will increase to 500,000 acre feet per annum. When all works are completed, it is estimated that the total gain to the Murrumbidgee by diversion and regulation will amount to 1,120,000 acre feet per annum and the total gain to the Murray will be 800,000 acre feet per annum. This additional water should be sufficient to provide irrigation for approximately 1,000 square miles of land which should result in additional annual primary production to the value of some £30 million per annum.

B. STATES AND TERRITORIES.

§ 1. Australian Local Pattern of Water Conservation and Use.

The foregoing sections deal with water conservation and irrigation in Australia generally and with national and interstate projects. The following survey indicates the local pattern of water resources and the steps taken by the State Governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria, almost every form of water scheme is in operation. In New South Wales, major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest appertains almost exclusively to hydro-electric generation. The Northern Territory is concerned primarily with stock supplies and the safeguarding of long stock routes.

§ 2. New South Wales.

1. *General.*—(i) *Rainfall and History.* In issue No. 37 of the Year Book (p. 1110), information is given on the pattern of rainfall and the history of irrigation in New South Wales. (See also Chapter II.—Physiography, p. 45, of this issue.)

(ii) *Administration.* The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood

control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme, and river improvement works.

Under the Water Act, the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales—Queensland Border Rivers Agreement ratified by Acts of both States in 1947, see page 248 of this chapter.

2. Schemes Summarized.—(i) *Location and Type.* The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam and Lake Brewster on the Lachlan, a tributary of the Murrumbidgee, and by Glenbawn Dam on the Hunter River. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and head storages have been commenced on the Macquarie and Namoi Rivers whilst Menindee Lakes storage, to conserve the waters of the Darling River, is being constructed. Substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including irrigation areas, irrigation districts, water trust districts, flood control and irrigation districts and river improvement districts. There are seven irrigation areas:—The Murrumbidgee Irrigation Areas consisting of 451,251 acres served with water through a channel system stemming from the river at Berembed Weir; the Coomealla Irrigation Area of 34,672 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,549 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,806 acres, supplied with water pumped from the Murrumbidgee; the Tullakool Irrigation Area of 18,006 acres supplied from the Edward River by diversion at Stevens Weir; and the recently established Buronga (8,693 acres) and Mallee Cliffs (1,900 acres) Irrigation Areas served by pumping from the Murray. All these areas are administered by the Commission and details of the various schemes are given in sub-section (iii) below.

(ii) *Works.* The capacities of the main storages (in acre feet) are:—

Murray:—Half share of Hume Reservoir, weirs and locks to Wentworth (1,011,420); Stevens Weir, Edward River (7,165).

Murrumbidgee:—Burrinjuck Dam (837,000); Berembed Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740).

Lachlan:—Wyangala Dam (303,900); Lake Brewster (123,900); Lake Cargelligo (29,435); Jemalong Weir (2,200).

Hunter:—Glenbawn Dam (185,000 acre feet irrigation storage; 108,000 acre feet flood mitigation storage).

Water from the Hume Reservoir is used for domestic and stock purposes, to provide bulk supplies for country towns, for the irrigation of vines, fruits and fodder in the Curlwaa and Coomealla Areas, for rice and other cereals and for pastures in the Tullakool Irrigation Area, for domestic and stock supply and irrigation in the Berriquin, Wakool and Denimein Districts, and for water trusts for domestic and stock purposes and/or irrigation.

The Wyangala Dam is 30 miles upstream from Cowra in the Central West. It has a catchment of 3,200 square miles. Water from the dam, supplemented by the unregulated flow of the Belubula River, provides for domestic and stock purposes along the full length of the river (over 700 miles) and also for irrigation by land holders operating licensed pumps. The towns of Cowra, Forbes, Condobolin, Hillston and Booligal are supplied. Balance storages at Lake Cargelligo and at Lake Brewster conserve water during periods of high flow for release as required. Water from the Lachlan, diverted at Jemalong Weir, supplies the districts of Jemalong and Wylde's Plains, serving an area of 224,556 acres. Proposals for future development include provision of a head storage on the Belubula River.

The approximate total length of channels (including main canals) constructed by the Water Conservation and Irrigation Commission in New South Wales is 3,247 miles. The approximate length of drains and escape channels is 1,000 miles, and the total length of pipe lines is approximately 68 miles, making a grand total of 4,315 miles of channels and pipe lines, etc.

(iii) *Extent of Systems and Nature of Irrigated Culture.* The following table shows the areas of the various irrigation systems and particulars of the areas under irrigated culture in New South Wales during 1958-59:—

AREAS OF SYSTEMS AND OF LAND IRRIGATED: NEW SOUTH WALES, 1958-59.

(Acres.)

System, etc.	Total Area.	Area Irrigated.										Total.
		Rice.	Other Cereals Grown for Grain.	Lucerne. (a)	Other Fodder Crops.	Pastures.		Vineyards.	Orchards. (c)	Vegetables.	Fallow Land and Miscellaneous.

(a) Includes grazing and cutting.

(b) Perennial and annual self-seeding. Perennial amounted to 53,042 acres.

(c) Citrus and deciduous. Deciduous amounted to 9,277 acres of which 7,795 acres were in the Murrumbidgee Irrigation Area.

(d) Not available. (e) Incomplete. (f) Area irrigable; details of area actually irrigated are not available.

(g) Excludes domestic and stock supplies for which particulars are not available. (h) Tobacco.

(i) Includes Flood Control Districts; but excludes some Irrigation Trusts for which information is not available.

3. Murrumbidgee. Irrigation. Areas.—(i) Description. These areas together with adjacent lands supplied under agreement, received 288,412 acre feet, or about a quarter, of the total water (1,183,989 acre feet) allocated within the State for stock, domestic supply and irrigation. They are served by the Burrinjuck Dam (capacity 837,000 acre feet), on the Murrumbidgee, 40 miles north-west of Canberra. The catchment above the dam is 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation areas and districts is supplemented by unregulated flow from the Tumut River below the dam. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied to the Irrigation Districts of Tabbatta, Benerembah and Wah Wah and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter and spring freshets, fed by melting snows, and is released during the September-May irrigation season. It passes along the river channel to Berembred Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet a second. The main canal has been completed to beyond Griffith, 96½ miles from the off-take. Reticulation channels aggregate approximately 879 miles and drainage channels 802 miles. In addition, approximately 446 miles of supply channels run through irrigation districts adjacent to the Murrumbidgee areas in which the water supply is operated and maintained by the Water Conservation and Irrigation Commission, but land transactions are not under its control.

The land on which the Murrumbidgee Irrigation Areas are situated originally comprised large sheep stations and was sparsely populated. Population was 12,000 in 1923, 15,000 in 1929, 20,000 at the 1947 Census and 24,000 at the 1954 Census. At the 1954 Census, the population of the Yanco District (with Leeton as the centre) was 10,000 and the population of the Mirrool Area (with Griffith as the centre) was 14,000. At 30th June, 1958, the population of Leeton Shire was estimated at 10,400, and that of Wade Shire at 15,450.

(ii) *Administration.* The Water Conservation and Irrigation Commission control land transactions and water supplies for the Murrumbidgee Irrigation Areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission under freehold or perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1959, was 32,970 acres, including 39,171 held for short lease grazing, agriculture, etc.

(iii) *Production.* Since the inauguration of the scheme in 1912, the volume of production from the area has greatly increased. Numbers of new crops are grown while the volume of the major products of the area prior to the scheme, such as wool and livestock for slaughtering, has expanded considerably. The principal products to-day are: wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans and root vegetables.

Rice growing was initiated on the Murrumbidgee Irrigation Areas in 1924 and has since become the most important crop grown in the area. In 1958–59, the total area sown was 28,021 acres and the total quantity of water delivered for the rice crops was 146,697 acre feet. In a normal season, the water supplied for rice represents about one-half of the total delivered to the Murrumbidgee Irrigation Areas.

Co-operation is a prominent feature in the Murrumbidgee Areas. Co-operative organizations in the Mirrool section handle about 300,000 bushels of fruit a year (compared with 54,600 in 1927–28). The annual sales turnover of the Leeton cannery in recent years has exceeded £2,000,000. Settlers and government agencies co-operate extensively in all matters relating to irrigation practice.

4. Other Irrigation Areas.—The Curlwaa, Coomealla, Hay, Buronga, Mallee Cliffs and Tullakool Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which also is responsible for the operation and maintenance of works to supply water.

Curlwaa Area, on the Murray near Wentworth, consists of 10,549 acres of which 7,815 acres were occupied at 30th June, 1959. Production consists of dried vine fruits, deciduous fruits and fodder crops.

Coomealla Area, 9 miles upstream from Curlwaa, comprises 34,672 acres of which 31,013 acres were occupied at 30th June, 1959. Production consists of vine and citrus fruits. An extension of the Coomealla Irrigation Area was completed in recent years to provide irrigation farms for ex-servicemen and 100 ex-servicemen were placed on the new farms.

Tullakool Area, formerly part of the Wakool Irrigation District, comprises 18,006 acres of which 14,311 acres are occupied. Main products are fat lambs, wheat and rice.

Hay Area, on the lower Murrumbidgee, consists of 6,806 acres, of which 6,241 acres are occupied. Production comprises dairy products, fat lambs, sheep, wool and fodders.

Buronga Area, a new area on the Murray River, upstream from Wentworth, consists of 8,693 acres, of which 1,151 acres are occupied. Production will be mainly fruit, vegetables and dairy products. Mallee Cliffs is also a new area upstream from Wentworth, its area being 1,900 acres, of which 1,332 acres are occupied.

5. **Irrigation Districts.**—These Districts are set up under the Water Act for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders. The following are the districts or provisional districts constituted and the areas of land benefited:—*Murray River*—Wakool District (completed) 494,708 acres, Berriquin Provisional District 781,152 acres, Denibootea Provisional District 307,212 acres, Denimein Provisional District 147,005 acres, Jernargo Provisional District (certain portions of which have been included in Berriquin District) 4,325 acres, Barramein Provisional District (domestic and stock supply only—works not yet commenced) 89,080 acres; *Murrumbidgee River* (completed)—Benerembah District 112,818 acres, Tabbita District 10,745 acres, Wah Wah District 575,224 acres, Gumly Provisional District 353 acres; *Lachlan River* (completed)—Jemalong and Wylde's Plains Districts 224,556 acres.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation—that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin, Denibootea and Denimein Districts is diverted through a main canal which will be 100 miles long when completed. Water for the Wakool Irrigation District and the Tullakool Irrigation Area is diverted from the Edward River at Stevens Weir, and a supplementary supply is also obtainable from Mulwala canal. At 30th June, 1959, the total length of completed canals and channels in Berriquin District was 970 miles, including Mulwala canal 75 miles, Berrigan channel 22 miles, subsidiary channels 767 miles, escape channels 96 miles and cross drainage channels 10 miles. Off-take capacity of the Mulwala canal is 5,000 acre feet a day.

Wakool, with 384 miles of channel, contains 308 holdings and the area developed by irrigation comprises about one acre in eight of the total area. The total area irrigated in 1958–59 was 67,931 acres and water supplied was 110,314 acre feet. Crops comprised fodders, pastures, rice, cereals and vegetables, but sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Total irrigated acreage was 228,240 at 30th June, 1959. Sheep and wheat growing are the main industries. The fat lamb industry is well developed and expanding. Dairying is making headway, and a butter factory has been established at Finley.

In the Benerembah, Tabbita and Wah Wah Districts, supplied from the channels of the Murrumbidgee Irrigation Areas, the quantity of water supplied during the 1958–59 season for irrigation, etc., was 95,864 acre feet, and the area irrigated was 49,523 acres, including rice and other cereals, pastures, and fodder crops.

For the same season, 8,468 acre feet of water were supplied from the Lachlan River to irrigate a total area of 10,340 acres within the Jemalong and Wylde's Plains Districts.

6. **Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.**—The Water Act provides for the constitution of Trust Districts for domestic and stock water and irrigation and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed, they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted (the area in acres of each district

is shown in parentheses)—*Murray River*—Tuppall Creek (78,080), Bullatale Creek (68,320), Little Merran Creek (157,440), Poon Boon (34,300), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,001,210); *Lachlan River*—Torrigan, Muggabah and Merrimajeele Creeks (170,240) Condobolin West Weir (4,480), Marrowie Creek (292,640), Ulonga (64,960), Micabil Weir (11,500); *Miscellaneous*—Algudgerie Creek (9,760), Nidgerie Weir (46,880), Great Ana Branch of Darling River (967,339), Collarenebri town water supply (117)—making in all a total area of 2,909,456 acres. Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. The following are the Trust Districts (area in acres is shown in parentheses):—*Murray River*—Bama (3,446), Goodnight (1,167), Bungunyah—Koraleigh (1,810), Glenview (661), Brangan (4,933); *Darling River*—Pomona (1,580); *Hunter River*—Blairmore (315)—making in all a total area of 13,912 acres.

The Lowbidgee Provisional Flood Control and Irrigation District (375,000 acres), the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. There are 50 holdings. Another district, Medgun (272,800 acres) near Moree in the North-West is also in operation. There are 20 holdings in the district and the area benefited by controlled floodings is 61,760 acres.

7. River and Lake, and Farm Water Supplies.—During recent years, the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in dry months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

The Farm Water Supplies Act was passed in 1946. Technical advice and assistance, and also financial assistance, are made available to help individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams.

8. Underground Water.—Extensive use is made of artesian, sub-artesian, and shallow underground water. Eighty thousand square miles in the northern and western portions are covered by the Great Artesian Basin. Eighty-one Bore Water Trusts and 12 Artesian Wells Districts have been constituted. The Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts settlers maintain the drains. Bore Trusts and Artesian Districts cover about 5 million acres and water is distributed through approximately 7,400 miles of open earth drains. The number of artesian bores giving a flowing or pumping supply at 30th June, 1959, was 1,071 and the estimated total daily flow from 600 flowing bores was 61 million gallons. The estimated flow in 1914–15 was 99 million gallons a day for 372 bores. The deepest bore is Boronga No. 2 (4,570 feet), which also has the greatest flow, namely, 1,010,200 gallons a day. Of the total number of bores sunk, 246 have been installed by the Government in connexion with public watering places, Bore Water Trusts or Artesian Wells Districts.

Of other structural basins of sedimentary rocks, e.g. Murray, Cumberland, Oxley and Clarence Basins, the Murray is the largest and also the most important in that it affords stock water supplies over an extensive area of the south-western section of the State. Only a few of these bores flow, the remainder being sub-artesian. Good supplies for stock and, in some instances, small scale irrigation, are obtained from porous sandstones in the Moss Vale-Picton area of the south-western lobe of the Cumberland Basin but the remainder has limited potential. Stock supplies are obtained from bores in the fringe zones of the Oxley Basin but the centre of this basin lies under the Liverpool Range. The Clarence Basin is relatively unimportant from a groundwater viewpoint.

In other parts of the State, the largest and best quality groundwater supplies are obtained from sands and gravels in the alluvium of the major rivers and their tributaries, particularly the western flowing rivers, e.g. Lachlan, Macquarie and Namoi. Supplies of up to 50,000 gallons an hour are obtained from wells and screened bores in these areas and are used for irrigation purposes. The Government is carrying out investigations to determine the groundwater potential of the alluvium of such valleys, particularly with regard to irrigation use, and a test-boring programme is in progress in the Lachlan Valley. Coastal river systems have a much more limited potential in this regard, the main exception being the Hunter.

Old sand dune areas along the coast provide large supplies of good quality water. However, since the soils of these areas are not suited to agricultural pursuits, exploitation has been largely confined to the Sydney and Newcastle areas. Initially a source of Sydney water supply, the Botany sands are now utilized mainly by industry. The Tomago sands provide a considerable proportion of Newcastle water supply.

The older rocks, which are mostly folded and jointed, are very variable in their groundwater potential and only rarely do they yield supplies sufficient and suitable for limited irrigation. Where suitable conditions obtain they yield useful stock supplies, mostly at depths between 50 and 250 feet.

It is necessary under the 1955 amendments to the Water Act that all wells and bores be licensed and details of over 13,000 bores and wells in the State are recorded. When assessed in relation to the geologic and topographic conditions of any particular area, such records provide valuable evidence of the groundwater potential and are thus of considerable benefit to landholders.

Since 1912, the Government has assisted settlers in shallow boring operations for which repayments are required over a period. To 30th June, 1959, the number sunk by the Commission's plants was 4,961 and their average depth was 308 feet.

9. Future Programme.—The programme of post-war development already in hand includes the provision of additional dams and storages, diversion weirs, and flood mitigation and river protection works in various parts of the State. Construction of Burrendong Dam on the Macquarie River is in progress and Keepit Dam on the Namoi River is nearing completion. Legislation has been passed authorizing the construction of a flood control and irrigation dam at Warkworth in the Hunter Valley and a storage dam at Blowering on the Tumut River. The Menindee Lakes storage project, part of the scheme for conserving the waters of the Darling River, is in course of construction. The Hunter River development, of which Glenbawn Dam is an integral part, concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. At 30th June, 1959, work was completed on construction of a diversion weir at Gogeldrie on the Murrumbidgee River from which water will be supplied to a new irrigation area (Coleambally) on the south side of the river comprising not less than 1,000 new irrigation farms. At Wyangala Dam, on the Lachlan River, work has commenced on the temporary lowering of the fixed crest of the dam spillway to enlarge the spillway for passage of greater floods. Investigations are being made concurrently to determine whether the dam can be increased in height to provide a greater storage. Later development will extend to a new area on the north side of the river.

10. Hydro-electricity.—A survey of the use of water for power generation in New South Wales may be found in the previous chapter (*see* p. 222).

§ 3. Victoria.

1. General.—(i) *Rainfall.* Particulars of the rainfall pattern of Victoria were given on page 1117 of Official Year Book No. 37. (*See also* Chapter II.—Physiography, p. 45, of this Year Book.)

(ii) *Administration.* The passing of the Irrigation Act of 1886 put the control of surface waters under the Crown, provided for the establishment of Irrigation Trusts and marked the beginning of irrigation development. In 1905, the Water Act established the State Rivers and Water Supply Commission and gave it control of all irrigation, rural domestic and stock supplies, town water supplies, and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally constituted waterworks trusts or local governing bodies.

The operations of the First Mildura Irrigation Trust, the waterworks trusts and local governing bodies administering town water supplies, the river improvement and drainage trusts and the various sewerage authorities which control sewerage undertakings in country towns, are also subject to general supervision by the Commission.

2. Works Summarized.—Since 1902, when a great drought emphasized the need for a concerted attack on water problems, the total capacity of water storages including Victoria's half share of River Murray storages has increased from 172,000 to 5,246,850 acre feet at 30th June, 1959. Most of the water from these storages is used for irrigation.

The area actually irrigated has risen from 105,000 acres in 1906 to 965,766 acres in 1958–59 to which 1,220,971 acre feet of water were delivered. The Commission estimated the value of irrigated production in 1957–58 at £53,000,000 representing about one-sixth of the value of Victoria's total rural production.

Town water supply and sewerage works have expanded to the stage where two-thirds of the population outside the metropolitan area is served by a reticulated water supply and one-third is served by a sewerage system. Land drainage, flood protection and river improvement have also been advanced.

A domestic and stock water supply is given to various rural areas throughout the State but principally to the Wimmera and Mallee about which a detailed description is provided later in this chapter.

Besides supplying water to its own irrigation districts, the Commission also supervises the diversion of water by private persons by means of licences and permits. In the last ten years, the area so licensed has increased by 50 per cent. and private diverters now provide an eighth of the irrigation production.

Another notable development in the post-war years has been Soldiers' Settlement Schemes based on irrigation. Altogether, nearly one thousand holdings have been prepared for settlers, including more than 500 in the Murray Valley District, 250 at Robinvale and 125 in Gippsland.

3. **Storages.**—The capacities of the main storages in the various systems (in acre feet) at 30th June, 1959, were as follows:—

Goulburn System:—Eildon Reservoir, 2,750,000; Waranga Reservoir, 333,400; Total, 3,104,100; *Murray-Loddon System*:—Half share of River Murray storages, 1,011,420; Cairn Curran, 120,600; Tullaroop, 60,000; Total, 1,340,230; *Wimmera-Mallee*:—Rocklands, 272,000; Total, 538,900; *Gippsland*:—Glenmaggie, 154,300; Total, 154,340; *Coliban*:—62,730; *Werribee-Bacchus Marsh*:—34,900; *Mornington Peninsula*:—5,800; *Orway*:—1,080; *Miscellaneous*:—4,770; *Grand Total*:—5,246,850.

4. **Extent of Systems and Nature of Irrigated Culture.** The following table shows the areas of the various irrigation systems and the areas under irrigated culture during 1958–59.

AREAS OF SYSTEMS AND OF LAND IRRIGATED: VICTORIA, 1958–59.

(Acres.)

WATER RESOURCES OF TASMANIA

1958

5. *Irrigation Systems.*—(i) *Goulburn.* The storage capacity for this system is provided principally by Eildon Reservoir. The enlargement of the storage capacity of this reservoir was completed in 1956, and will enable 600,000 acres to be irrigated when the necessary distributary works are completed. Water from Eildon Reservoir flows down the Goulburn River to the Goulburn Weir, located near Nagambie, which raises the summer level of the river about 45 feet for the purpose of diversion. From this weir, water is diverted via the East Goulburn Main Channel direct to the irrigation areas around Shepparton. The two western main channels from the weir (one of which was recently duplicated) convey water to the Waranga Reservoir near Murchison in addition to supplying part of the large Rodney District directly.

Two main outlet channels issue from Waranga Reservoir. One serves the western section of Rodney District while the other serves irrigation districts as far west as Boort, and continues into the Wimmera-Mallee Domestic and Stock System to provide a supplementary supply as far as Beulah East.

Water is also supplied to part of the Goulburn System from Cairn Curran Reservoir on the Loddon River, and Eildon itself may be used to supplement supply to the districts along the Murray River.

The main products of the Goulburn districts are dairy produce, fruit, wool and fat lambs. Annual production of canning fruits in the area is about two-thirds of Australia's total.

(ii) *Murray River System.* The waters of the River Murray are used to supply an area of more than 700,000 acres between Yarrawonga and Merbein. The districts between Yarrawonga and Swan Hill, except Tresco near Swan Hill, are supplied by gravitation and those west of Swan Hill are supplied by pumping.

The Murray Valley Irrigation District, which is served from Yarrawonga Weir, comprises 268,000 acres west of Yarrawonga between the River Murray and Broken Creek. Dairy products, fat lambs and canning fruit are the main items produced.

The gravitation system based on Torrumbarry Weir (52 miles downstream from (Echuca) serves an area of about 378,000 acres around Cohuna, Kerang, Koondrook and Swan Hill. Also included in the Torrumbarry system is the Tresco district supplied by pumping from Lake Boga. Dairying and fat lamb raising are again the major industries. Vine fruits and vegetables are grown around Swan Hill and tobacco growing is increasing in importance.

West of Swan Hill lie four Commission districts with a pumped supply—Nyah, Robinvale, Red Cliffs and Merbein. These contain a total of 1,500 holdings devoted largely to dried vine fruit although citrus fruit and table and wine grapes are of some importance. The area around Mildura is controlled by the First Mildura Irrigation Trust, the only irrigation trust operating in Victoria. It serves an irrigated area about half the combined size of the four Commission districts.

(iii) *Southern Systems.* The most important southern system is an area of 130,000 acres around Maffra and Sale, mainly devoted to dairying. This is supplied from Glenmaggie Reservoir on the Macalister River and from the natural flow of the Thomson River when the flow is adequate. Other important irrigation districts are located quite close to Melbourne around Werribee and Bacchus Marsh. These districts are intensively developed for dairying and vegetable growing.

(iv) *Wimmera-Mallee Domestic and Stock Supply System.* This system serves an area of 11,000 square miles or nearly one-eighth of the State. Without the artificial supply of water, development in this area would be meagre and hazardous owing to the constant threat of drought. The main supply is drawn from the Grampians storages and is supplemented by water drawn from the Goulburn and Loddon Rivers, via the Waranga Western Channel referred to previously, although works in progress will make the Wimmera and Mallee independent of supplies from the Goulburn and Loddon River in the near future. In addition, certain areas in the north of the system are supplied direct from pumps on or near the River Murray.

As far as possible, water is distributed in the winter and spring to reduce evaporation losses in 6,500 miles of Commission channels and 3,000 miles of farm channels. It is the

responsibility of the 10,000 farmers served to provide sufficient storage capacity on their farms to meet their domestic and stock needs for the year. In addition to meeting this demand, the Grampians storages provide a water supply for 40,000 people in 47 towns and are used to irrigate a small area near Horsham.

6. Town Water Supplies and Sewerage.—Details of water supplies and sewerage to towns and local authorities by the Commission are given in § 5 of Chapter XIX., Local Government, of this Year Book.

7. Drainage, Flood Protection and River Improvement.—The largest work in this category undertaken by the State Rivers and Water Supply Commission is the Koo-wee-rup-Cardinia Flood Protection District embracing 80,000 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth £3 million a year.

Another large-scale work, which was completed during 1958–59, is the drainage of 12,500 acres of privately owned land flooded by a recent rise in the level of Lake Corangamite in the Western District. This will free a large area of the lake for grazing in normal years.

By the River Improvement Act of 1948, the formation of local river improvement and drainage trusts under the supervision of the Commission has been greatly facilitated and since 1950, 16 such trusts have been formed. The importance of river improvement work is expected to continue to grow.

8. Finance.—The capital liability of the Commission at 30th June, 1959, was £93,500,000. Of this amount, £64,000,000 was expended on irrigation and £7,000,000 on domestic and stock supply systems. Both these amounts were financed entirely by the State. The total liability for urban supply was £12,000,000 of which 60 per cent. was borne by the State and the remainder by the districts concerned.

9. Underground Resources.—Due to inadequate information as to their extent, the underground waters of Victoria have not as yet been greatly utilized. The first stage of a comprehensive survey of these resources by the Victorian State Rivers and Water Supply Commission, which is partly responsible for the location, investigation and development of subterranean waters, has been completed. It provides records of bores in the Mallee, Wimmera and Glenelg regions, and a description of the Murray Artesian Basin. Investigations have also been made into the underground water resources of local areas such as Orbost Flats, Llowalong Estate on the Avon River and elsewhere.

The Murray Artesian Basin underlies an area of 107,250 square miles, of which 26,808 square miles are in Victoria, 28,269 square miles in South Australia and 52,173 square miles in New South Wales. The quality of the water varies from suitable for domestic purposes in much of the South-western part of the basin to saline and suitable for stock in the rest of the basin. Over 300 bores exist in Victoria, ranging in depth from 50 to 3,000 feet and with an average daily flow of 3,000,000 gallons. In the last few years, the Victorian Department of Mines has expanded considerably the work of exploration for underground water.

10. Future Programme.—The main irrigation work under construction is the enlargement of the channels of the Goulburn System to distribute the extra water now available from the Eildon Reservoir and the Cairn Curran Reservoir. A considerable amount of this work has already been carried out. Other large projects include the construction of Castlemaine Reservoir and important new works in the area known as Carrum Drainage District.

11. Hydro-electricity.—Details of hydro-electricity potential and utilization in Victoria may be found in the previous chapter (*see* page 227).

§ 4. Queensland.

1. General.—(i) *Rainfall.* Particulars of the rainfall pattern of Queensland are given in Official Year Book No. 37, page 1122. (*See also* Chapter II.—Physiography, page 45 of this Year Book.)

(ii) *Administration.* The administration of irrigation and water supply in Queensland is under the control of a Commissioner of Irrigation and Water Supply. For a description of the development of the present administration, see Official Year Book No. 42 and earlier issues.

(iii) *Water Utilization in Queensland.* Queensland's predominant interest in the field of water conservation is the provision of stock and domestic water supplies in its great pastoral areas which contain nearly half of the Commonwealth's cattle and a seventh of the sheep. In addition to the stabilization of water supplies in the pastoral areas and the provision of water along stock routes for travelling stock, the development of irrigated pastures on the eastern seaboard for fattening stock adjacent to meat works and markets has received much attention in later years. The development of projects of water conservation and irrigation on individual farms for irrigation of pastures and fodder crops for dairy herds and for growing small crops and orchard fruits has also received attention.

The State's crops differ from those of other States in that a large proportion is tropical. Sugar-cane is the greatest individual crop, representing in value approximately 45 per cent. of total agricultural production. Approximately 18 per cent. of the sugar-cane acreage was irrigated in 1958-59 and this represented some 42 per cent. of the total irrigated area in Queensland. Queensland is Australia's major tobacco-producing State, and plans are in hand to increase annual production of this crop greatly by means of development under irrigation. The area of tobacco irrigated during 1958-59 represented 94 per cent. of the total plantings of this crop in the State.

2. *Great Artesian Basin.*—(i) *General.* Western Queensland beyond the 20 inch rainfall belt is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, excluding the Cloncurry Mineral Field and the Barkly Tableland. It comprises 430,000 square miles or about two-thirds of the total State area of 667,000 square miles. Statistics of bores and flow as at 30th June, 1959, are:—Artesian bores drilled, 2,620; artesian bores still flowing, 1,725; total depth drilled, 3,704,363 feet; deepest bore, 7,009 feet; total estimated flow, 208 million gallons a day. Certain bores previously classified as "ceased" have been inspected and found to be still flowing. Some ceased bores, after deepening, are again flowing. The average depth of artesian bores is 1,408 feet. Some 9,400 sub-artesian bores, within the Great Artesian Basin, have been registered in Queensland. Artesian pressure and flow are both steadily diminishing. The rate of diminution varies widely throughout the basin. Present general average rates of diminution are:—pressure, 1-2 feet/head, total flow, 2-3 per cent. per annum.

The greater part of the artesian discharge is distributed by open earth channels totalling some 15,500 miles in length. Most of the water flowing along these channels is lost by soakage and evaporation and less than 10 per cent. is actually used by stock. The amount of soakage depends largely on the permeability of the earth and the rate of evaporation varies from season to season, but the shape and maintenance of the drains constitute further factors. The effective utilization of this water could be increased by the use of piping to overcome the loss by soakage and evaporation occurring in the open earth channels.

Although artesian beds underlie such a large area of the State, only 79,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores are not economical watering facilities, because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. Very few new bores exceed 2,000 feet in depth, and a new bore greater than 3,000 feet in depth is exceptional.

Shallow sub-artesian supplies, of variable quality and volume, are available at depths of less than 1,000 feet over a large area of the basin. These beds are not connected with the artesian beds. An essential practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

Although the number of bores has gradually increased over the years, the total flow of all bores has declined since the peak flow of 351 million gallons a day was recorded in 1914. By 1938, the flow was only 230 million gallons a day. The decline gave rise to the fear that supplies were giving out and that the basin was seriously threatened. In 1939, the Queensland Government appointed a committee to ascertain the nature and structure of the Great Artesian Basin with particular reference to the problem of diminishing supply. In its final report, presented in 1954, the majority of the Committee found that the output will continue to decline during the next sixty years when the flow from the remaining flowing bores will be of the order of 110 million gallons per day. At this stage, the discharge from windmills, springs and other leakages and the underflow past the Queensland borders will be of the order of 20 million gallons a day. The total discharge of the order of 130 million gallons a day will be in equilibrium with the recharge of the basin. Numbers of bores on higher ground will cease to flow during the next sixty years and the area served by flowing bores will contract by perhaps 20 per cent.

A programme of strict conservation, involving the restriction of bore flows and improved bore drains, would result in smaller shrinkage of the area served by flowing bores and would actually cost less than the installation and maintenance of pumps or other watering facilities which would be required to provide alternative water supply as additional bores ceased to flow because of a policy on non-restriction. On the other hand, strict conservation would not increase the amount of water ultimately available as perennial flowing supply and would in fact decrease the amount of water passed from intake beds to aquifers within the basin by flattening the hydraulic gradient. The benefit from strict conservation was not considered sufficiently great, nor sufficiently concrete, to warrant implementation.

The quality of artesian water from the greater part of the basin is such that it is not suited for prolonged use for irrigation on most soils. Moreover, artesian supplies are not sufficient for both large scale irrigation and stock-watering. Practically the whole of the final steady-rate discharge from flowing bores will be needed for the watering of stock. Detailed surveys of numerous other sources of underground water in the State, such as the smaller sedimentary basins, the Cainozoic alluvial deposits, recent coastal sands and fractured older rocks, still largely remain to be carried out.

(ii) *Bore Water Areas.* The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity and to conserve artesian supplies by fully utilizing the flows from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by Local Boards or by the Commissioner of Irrigation and Water Supply, acting as a Board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1958-59 are:—Areas constituted, 72; administered by Commissioner, 56; administered by local boards, 6; number abolished, 10; area benefited, 4,425,382 acres; average rate per acre, 1.8d.; number of flowing bores, 56; total flow, 24,092,000 gallons a day; drains served, 2,754 miles.

3. *Other Basins.*—Two major areas bordering the Great Artesian Basin in Queensland carry artesian water. One is located on the western slopes of Cape York Peninsula and the other in the Dawson-Mackenzie River Basin. A small area in which flowing wells occur (the Gatton Basin) extends from Gatton to the coast.

Sub-artesian water supply from the Barkly Basin which extends into western Queensland from the Northern Territory, is referred to in the section dealing with the Northern Territory.

4. *Stock Route Watering.*—During 1935, a scheme was inaugurated to water adequately stock routes in the western portion of the State including main trunk routes connecting Eromanga to Burketown, Charleville to Normanton, and Clermont to Einasleigh, with branches to railheads, a total distance of 3,117 miles. Watering facilities were also provided on subsidiary routes. Under the Stock Routes and Rural Lands Protection Act of 1944, a co-ordinating board was constituted, representative of Government departments and pastoral interests, under the direction of the Minister for Lands and with an officer of that Department as superintendent whose duty was, *inter alia*, to investigate and implement a long-range, co-ordinated plan for adequate watering of all stock routes throughout the State. Natural waters are being supplemented by artificial facilities at intervals of

about 9 miles. Construction is supervised by the Irrigation and Water Supply Commission and by local authorities. Completed facilities are vested in local authorities for control and maintenance. From 1935 to 30th June, 1959, 471 facilities had been completed and at 30th June, 1959, 66 facilities were under construction or investigation.

5. *Irrigation.*—(i) *General.* Irrigation as a means of stabilizing and increasing agricultural production is continuing to receive attention in Queensland. In addition to the Theodore Irrigation Area on the Dawson River, orthodox projects served by a channel system have been developed at Clare, Millaroo and Dalbeg, all on the Burdekin River, and Gibber Gunyah on the Dawson River. St. George on the Balonne River is also being developed. Construction in the St. George Area is approaching completion and 20 farms have been opened, of which 18 are in production. Construction of the main channel system within the Mareeba-Dimbulah Irrigation Area has continued and 25 existing farms are being supplied with water by gravity. Because of the large variations in both monthly and annual river flows, major developments cannot be undertaken until large storage works are provided. Most irrigation in Queensland is undertaken by private farmers operating under licence and obtaining water by pumping from streams or from natural underground storages. There has been considerable development during recent years of individual water conservation projects (water harvesting) to provide storage for irrigation of pastures, fodder crops and small crops, and orchards. Where available, electricity is the most popular source of power for pumping and the principal areas supplied with electricity are the Burdekin Delta, the Lockyer Valley, and the Darling Downs.

It has been estimated that about two thirds of the total area irrigated in Queensland is supplied from underground water. The main areas where these supplies have been extensively developed are the Burdekin Delta (Ayr-Home Hill Area), the Pioneer Valley, Callide Valley, Lower Burnett (Bundaberg Area), Lockyer Valley and Redland Bay. Similar development is taking place in other areas such as parts of the Darling Downs.

Furrow irrigation is used for cotton, sugar cane, most tobacco and some other crops. Spray irrigation is adopted to a considerable extent for fruit, vegetables, fodder crops and a small part of the tobacco. Spraying is well suited to the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Use of the border check method in the irrigation of pasture and fodder crops has proved successful and its use is increasing.

The following table shows for each division of the State the number of irrigators and the areas irrigated for the year ended 31st March, 1959.

AREA OF LAND IRRIGATED: QUEENSLAND, 1958-59.

Division.	No. of Irrigators.	Area Irrigated (Acres).							
		Vegetables.	Fruit.	Sugar-cane.	To-bacco.	Cotton.	Other Crops.	Pastures.	Total.
Southern Queensland ..	5,040	21,523	3,943	16,322	2,024	339	31,461	7,326	82,938
Central Queensland ..	535	901	217	18	9	978	5,124	1,493	8,740
Northern Queensland ..	1,574	4,173	716	49,273	5,457	203	1,550	1,583	62,955
Total	7,149	26,597	4,876	65,613	7,490	1,520	38,135	10,402	154,633

The pattern of irrigation in Queensland is unlike that in southern States; the more important developments in tropical and sub-tropical areas are therefore discussed briefly in the sub-sections following. It should be noted that the spring to autumn "irrigation season" of the temperate southern irrigated lands is not applicable, and that round-the-year irrigation is required throughout most of the State, the timing and duration of the summer "wet" season being too variable to enable a definite non-irrigation season to be fixed.

(ii) *Lockyer Valley.* West of Brisbane and within 30 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation. Despite a mean annual rainfall of 30 inches, the variation is great, and irrigation is necessary for continuous agricultural production. Surveys suggest that some 60,000 acres of land highly suitable for irrigation are available. Of this area, only about 30 per cent. is under irrigation, the number of pumps operating from wells and open water exceeding 550 and 600 respectively. Over 60 per cent. of the farmers operate electric pumps for irrigation purposes and a special policy designed to encourage such development is fostered by the Southern Electric Authority of Queensland. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,370 acre feet. These also tend to augment and conserve underground supplies. The Irrigation Research Station established at Gatton has been converted to a Regional Experimental Farm under the control of the Department of Agriculture and Stock.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(iii) *Burdekin River.* The Burdekin River, which enters the sea between Townsville and Bowen, is a major factor in the life of North Queensland. In most years, heavy floods from a catchment twice the size of Tasmania cause extensive damage and traffic disruptions. On the other hand, the fertile delta area, with its underground water supplies at shallow depth, has contributed greatly to the agricultural prosperity of North Queensland. Present development is confined to the delta area. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently sugar growers and other farmers have tapped the underground water resources of the delta to obtain supplies in the dry periods. Sugar is the main irrigated crop, though citrus fruits, pineapples, vegetables and tobacco are also irrigated. The irrigated area is in excess of 30,000 acres, up to 1,000 acre feet of water being drawn daily from underground sources.

In the Home Hill-Inkerman areas on the south side of the Burdekin, water is obtained from shallow wells by electric pumps supplied from a local power station controlled by the Townsville Regional Electricity Board. Around Ayr, on the north side of the river, electric power from the mains of the Townsville Regional Electricity Board is now being used in place of individual internal combustion engines. At both Home Hill and Ayr, water for domestic supply is raised by a windmill on each property.

In 1940, the Burdekin River Trust was formed to safeguard the sugar areas of the Delta from erosion and floods. An irrigation research station studies the development of pastures and irrigated crops under local conditions.

A major multi-purpose scheme, involving irrigation, flood control and hydro-electric power generation, is being investigated by the various interested government departments under the general supervision of the Burdekin River Authority. The development envisaged includes a dam storing 6,584,000 acre feet, which would make water available for the irrigation of at least 250,000 acres. The principal industries anticipated are tobacco-growing, dairying, and cattle-fattening, with sorghum, sunflowers, peanuts, cotton and sugarcane as other possible forms of production. The projected scheme will change the Burdekin from a mixed blessing to one of the Commonwealth's greatest resources for agricultural and industrial production.

The Clare Irrigation Area, constituted in 1949, the Millaroo Irrigation Area, constituted in 1952, and the Dalbeg Irrigation Area, constituted in 1953, are at present predominantly used for tobacco production. Located from 25 to 65 miles upstream from the mouth of the Burdekin, these areas comprise 12,000 acres and obtain irrigation waters from central pumping stations drawing initially on the unregulated flow of the Burdekin. A temporary storage of 6,700 acre feet capacity has been constructed about 79 miles upstream from the mouth of the Burdekin. At 30th June, 1959, 146 farms were occupied and total production for 1958-59 was valued at £795,000.

(iv) *Dawson Valley.* The Dawson River, a 392-mile long tributary of the Fitzroy River, rises in the Carnarvon Range and joins the Mackenzie River to form the Fitzroy 50 miles west of Rockhampton. Lands bordering the river in its northerly course of about 170 miles before its confluence with the Mackenzie River are commonly termed

the Dawson Valley. A scheme for the development of the Dawson Valley providing for the irrigation of 70,000 acres was inaugurated in 1923. Storage for the scheme was to be provided by a dam of 2,500,000 acre feet capacity at Nathan Gorge. Much investigational and survey work on the scheme was carried out, but the general financial depression and limited loan funds brought about the cessation of this work. However, the initial step in construction had been completed, comprising a weir on the river at Theodore and irrigation works to serve an area of 3,500 acres supplied from a central pumping station. Two additional weirs have since been built, giving a total storage of 10,280 acre feet. Pasture, vegetables, cotton, fruit and dairy products are the principal produce. Attention has recently been given to the former plans for the valley and earlier work is now under close scrutiny as a prelude to future development. Construction of works to serve some 2,400 acres at Gibber Gunyah, adjacent to the existing Theodore Area, has been completed and 19 farms have been occupied.

(v) *Mareeba-Dimbulah Area.* The existence of large areas of sandy soils suitable for tobacco production in the valleys of the Walsh and Barron Rivers in the neighbourhood of Mareeba and Dimbulah has led to large-scale investigations into possible irrigation development in the area. Surveys indicate that 40,000 acres of land suitable for irrigated culture, including 32,000 acres suitable for tobacco, are available. In 1958-59, some 4,116 acres of high-grade tobacco were grown. Seven weirs with a combined capacity of 2,650 acre feet have been completed on a number of streams to store water for irrigation.

During 1952, a report on the utilization of waters of the Barron and Walsh Rivers was prepared and the establishment of an irrigation undertaking approved by the Queensland Government. The projected undertaking provides for construction of a major storage at Tinaroo Falls on the Barron River to store 320,000 acre feet, and construction of irrigation works to serve 78,000 acres commanded by this storage. In each case, construction has commenced. Further development by construction of a second storage at Nullinga on the Walsh River has been deferred for the present. Tobacco will be the basic crop while peanuts, vegetables, maize, cotton and stock fattening also appear suitable.

(vi) *Border Rivers Project.* The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of the Dumaresq-Barwon Border Rivers Commission on which each State is represented. For information on the project see page 248.

(vii) *Balonne River.* The St. George Irrigation Area has been constituted and construction of works to serve some 11,000 acres is in progress. Water supply for the area will be obtained by pumping from the combined weir and road bridge on the Balonne River at St. George.

6. *Channel Country.*—Extensive investigations have been made of the Channel Country fed by inland rivers in the south-western corner of the State. This country is intersected by shallow and irregular flood channels through which huge volumes of flood waters pass in favourable seasons; consequent on the flooding, a heavy growth of natural pastures is produced on the flooded lands, providing feed in quantities far in excess of that required for the normal stock population of the area. If the occurrence of flooding could be made more reliable by means of storages to create artificial floods, the pastoral resources of the area would be enormous. However, inquiries directed on these lines have revealed that little can be done to increase or stabilize the turn-off of fat cattle by artificial storage.

At 30th June, 1952, 41 watering facilities, at an estimated cost of £277,000, had been proposed under a Commonwealth-State agreement for stock routes through, and in the approaches to, the Channel Country. By 30th June, 1959, 31 had been completed, while four sub-artesian bores and one excavated tank were under construction.

7. *Hydro-electricity.*—An outline of Hydro-electricity Schemes operating in Queensland is given in the previous chapter (see page 230).

§ 5. South Australia.

1. *General.*—(i) *Rainfall.* Brief particulars of the climatic conditions in South Australia are given on page 1129 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.)

(ii) *Administration.* Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act provides for the construction of storages in non-reticulated areas and authorizes the Minister to “divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under, or on, any land entered upon for the purpose of supplying water to the inhabitants of any water district”.

(iii) *Methods of Catchment and Conservation.* Early in the history of the State the rights to all running streams, springs and “soaks” were vested in the Crown. The Water Conservation Act was passed in 1886 and, up to 30th June, 1959, more than 550 dams, tanks and “rainsheds” had been built or acquired by the State, in addition to 460 wells and 340 bores, at a total cost of £1,759,395. The “rainsheds” comprise timber frameworks roofed with galvanized iron to catch precipitation which is delivered to storage tanks and is available for surrounding settlers and travellers. Rainshed catchments vary from a few hundred square feet to four acres, discharging into tanks ranging from 2,000 to 500,000 gallons. Over most of the State, extraordinary precautions are taken to counteract evaporation. Pipelines in preference to open channels and covered storages are used to reduce evaporation. Meters are attached to practically all services to check usage by individual consumers.

2. *Irrigation.*—In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped on to the land or gravitated from the river. The upper Murray of South Australia and the Mildura area of Victoria formed the cradle of Australian irrigation. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. Including land allotted for War Service Land Settlement purposes, the Department of Lands administers in the Murray Valley an area of 32,758 acres of irrigable high land together with 9,449 acres of reclaimed swamp and 167,175 acres of non-irrigable land in the irrigation areas and 29,747 acres of land temporarily leased and reserved for commonage or other purposes, amounting in all to 239,129 acres. In addition, the Renmark Irrigation Trust controls 20,557 acres, of which 9,550 are irrigated. Water used for irrigation purposes in 1958–59 in the high land irrigation areas controlled by the Department of Lands, excluding War Service Land Settlement areas in course of development, was approximately 100,000 acre feet and, in addition, approximately 63,000 acre feet were applied to the reclaimed areas. In the Renmark area, approximately 29,000 acre feet of water were used for irrigation in 1958–59. The production of the upper Murray areas is almost exclusively fruit and vines. Principal crops are sultanas, currants, lexias, apricots, peaches, nectarines, pears and figs (mainly for dried fruit), wine grapes, and citrus fruits. Before irrigation, these semi-arid lands were of little productive value.

Renmark Irrigation Trust is administered by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold, self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 100 miles of channel for reticulation to 9,550 acres.

The following tables show the acreage devoted to various crops in the government-controlled and Renmark Irrigation Trust areas on the upper Murray, and in the government-controlled reclaimed swamp districts near the mouth of the Murray, which are devoted to dairying.

3. Water Supply Schemes.—(i) *Adelaide Metropolitan Water Supply.* Adelaide derives its water from five reservoirs in the nearby Mount Lofty Ranges, and by means of pumping stations and a pipeline from the River Murray at Mannum. The reservoirs have a storage capacity of 51,497 acre feet and the pipeline a capacity of 53,627 acre feet a year. The consumption for the year 1958-59 was 80,476 acre feet, equivalent to a consumption of 108 imperial gallons per head per day. The capital cost to 30th June, 1959, was £29,936,090.

(ii) *Country Reticulated Supplies.* Areas extending to a distance of 90 miles north of Adelaide are supplied from the Warren, Barossa, and South Para Reservoirs (36,290 acre feet) in the Barossa Ranges. To supplement these storages, a branch main from the Mannum-Adelaide Pipeline feeds into Warren Reservoir.

Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, with connexions to the Warren system and the Morgan-Whyalla Pipeline. The 223-mile pipeline from Morgan on the River Murray to Whyalla was designed to deliver annually 4,400 acre feet to Whyalla and 3,300 acre feet to the northern districts. Branch pipelines have been constructed to Jamestown, Caltowie, Peterborough, Clare and Woomera. Yorke Peninsula is now being reticulated. A pipeline has been laid from the Bundaleer Reservoir, and the reticulation system will be extended south to Edithburgh. Work is in progress on the construction of the Myponga Reservoir. A concrete arch dam is being built on the Myponga River, impounding 22,000 acre feet of water. This storage will be used to supply towns and country lands south to Normanville and as an additional source of supply for the Adelaide Metropolitan area.

Water conservation and distribution works in country districts have cost £31,203,396 (exclusive of river control and irrigation works on the River Murray) and contain 6,349 miles of water mains. The capacity of country storages is 71,569 acre feet, serving a population of approximately 306,500.

4. *Underground Water.*—The occupied portion of South Australia is, on the whole, well endowed with underground water and the extent of the several artesian basins is reasonably well known. There are also considerable areas, notably in the south-east of the State, in which ground water occurs. Quality varies widely, but a great deal is at least useful for watering stock and this is the major use to which it is put.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are high in proportion to the carrying capacity of the arid land. However, deep boreholes have been drilled by the government to provide watering places along stock routes, and pastoralists rely largely on supplies from non-pressure aquifers at shallower depths. Marree township is supplied from this source, its deepest bore being 575 feet.

The use of the waters of the Murray Basin is essential to settlement in the Murray Mallee country and in the south-east of the State, especially for farms and township supplies to Mount Gambier, Naracoorte, Bordertown, Pinnaroo, Penola, Lamerook, Coonalpyn, Nangwarry, Mount Burr, Kingston (S.E.), Parilla and Karoonda. The deepest bore in this Basin is 1,805 feet. Towns elsewhere which are supplied from bores include Mount Barker, Port Lincoln, Peterborough, Warooka and Willunga.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, for which the Government maintains about 30 drills. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne and considerable tracts of previously undeveloped country in the Upper South-east, Kangaroo Island and Yorke Peninsula have been found to have usable water and are now being opened up.

Ground water resources surveys are undertaken continually by departmental geologists, the results being published in various bulletins and reports issued from time to time. The *Groundwater Handbook* published in 1959 by the Department of Mines provides a comprehensive detailed review of the State's ground water resources.

5. *Farm Water Schemes.*—While the Department of Mines and the Engineering and Water Supply Department give assistance to individual farmers in the provision of supplies from underground sources, a great part of the farming areas obtains water supply under pressure from the extensive distribution systems connected to various reservoirs or the Murray River.

6. *South-Eastern Drainage.*—Nature has played an ironic prank in the south-east of South Australia where it has been necessary to construct costly drainage schemes to dispose of surplus water. The area comprises a series of valleys or flats separated by low ranges parallel to the coastline which prevent natural drainage. The highest "range" is approximately 50 feet above the adjacent flat and the most easterly flat, some 50 miles from the coast, is 200 feet above sea level. The ranges are generally of poor soil or stony but the flats are fertile.

The Millicent Drainage System was completed in 1885, when 100,000 acres were reclaimed by 225 miles of drains at a cost of £150,000, which was included in the land allotment prices.

The South-Eastern Drainage Area System, which is controlled by the South-Eastern Drainage Board, comprises drains constructed by the Government at national cost, plus those undertaken by the Government in co-operation with the landholders.

The area is bounded on the east by the State Boundary, and on the west by the sea coast. It extends from about 20 miles north of Kingston southerly to near Millicent and Kalangadoo. Up to 1948, about 430 miles of drains had been provided at a cost of £720,876. These were of a developmental nature intended more to promote the rapid removal of floodwaters than to provide a complete system of drainage. Since 1948, the complete drainage of the Biscuit, Reedy Creek and Avenue Flats in the Western Division has been in progress. The southern section of 260,000 acres, involving an excavation of 8,100,000 cubic yards has been completed, and a start has been made on the northern section of 140,000 acres.

The capital cost of drainage in the South-Eastern Drainage Area System at 30th June, 1959, was £4,564,951, and the length of drains constructed was 666 miles.

§ 6. Western Australia.

1. General.—(i) *Rainfall.* Brief particulars of the climatic conditions in Western Australia are given on page 1133 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.)

(ii) *Administration.* Natural water rights in the State, with few exceptions, are vested in the Crown. Irrigation districts are administered by the Minister for Water Supply, Sewerage and Drainage under the Rights in Water and Irrigation Act 1914–1951, and he is advised by an Irrigation Commission representing the local irrigationists and governmental technical and financial branches. Water supplies in country areas in Western Australia coming under the provisions of the Water Boards Act 1904–1954, and the Country Areas Water Supply Act 1947–1957 are controlled either by the local authority or by the Water Supply, Sewerage and Drainage Department. Those controlled by the Department (except for some local water supplies to country towns still under the provisions of the Water Boards Act) form the Country Areas Water Supply, consisting of the Goldfields and Agricultural Water Supply, the Great Southern Towns Water Supply and local water supplies to country towns and districts. The Department also controls individual water supplies serving isolated mines, stock routes, and agricultural areas.

2. *Irrigation.*—(i) *South-West.* The main irrigation areas are situated along the South-Western Railway between the towns of Waroona (70 miles from Perth) and Dardanup (116 miles from Perth).

The Water Supply, Sewerage and Drainage Department controls three irrigation districts—Waroona, Harvey and Collie River—the total area irrigated in these districts during 1958–59 being 25,252 acres and the total water used approximately 90,000 acre feet. The total of acre waterings (that is, the number of acres watered multiplied by the average number of waterings) was 148,632. Investigations are being carried out with a view to irrigating a further 30,000 acres south of the Collie River Irrigation District.

The Waroona Irrigation District (10,397 acres) is supplied from Drakes Brook Dam (1,854 acre feet capacity) and Samson Brook Dam (6,624 acre feet), the Harvey Irrigation District (37,269 acres) from the Harvey Weir (8,370 acre feet) and Stirling Dam (46,368 acre feet), and the Collie River Irrigation District (36,020 acres) from the Wellington Dam (29,440 acre feet).

The following table, which shows acre waterings supplied to crops in the irrigation districts of Harvey, Waroona and Collie River during the seasons 1954–55 to 1958–59 illustrates the general growth of these irrigation schemes.

IRRIGATION, WESTERN AUSTRALIA: ACRE WATERINGS(a).

Year.	Pasture.	Fodder.	Potatoes.	Vegetables.	Orchard.	Flax, Broom Millet, and Preparation of Ground.	All Crops.
1954–55	112,659	3,268	2,363	3,294	845	121	122,550
1955–56	108,468	3,599	1,834	3,452	946	127	118,426
1956–57	129,502	3,757	3,995	3,317	1,024	119	141,714
1957–58	133,634	5,384	3,299	2,947	972	..	146,236
1958–59	136,940	6,324	1,858	2,495	1,014	1	148,632

(a) Number of acres watered multiplied by average number of waterings.

(ii) *General.* In 1958–59, the total area irrigated in Western Australia was 44,102 acres made up of vegetables (8,211 acres), fruit (6,850 acres), vineyards (630 acres), pastures (24,982 acres) and other crops (3,429 acres).

An area of approximately 650 acres of Gascoyne River flats adjacent to Carnarvon is under irrigated cultivation. The principal crops are bananas and beans but others such as tomatoes are also grown. For this agriculture, some 130 acre feet of water a week are drawn from river underflow.

On the Liveringa flood plain, 65 miles south east of Derby, commercial production of rice has been achieved following successful experimental work. Irrigation water from the Fitzroy River is diverted through Uralla Creek, an anabranch, for 25 miles to the rice growing area where a natural storage of approximately 1,200 acre feet exists. During periods of low flow in the Fitzroy River, the supply of water is augmented by pumping.

The Ord River in the Kimberley Division of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 inches in the north. The hottest months (December to March) are also the months of highest rainfall. Communications and population are sparse. The Western Australian Government is considering a proposal to build a dam to conserve 3,000,000 acre feet of water, equipped with a hydro-electric plant, which might supply water for an area of some 200,000 acres agriculturally and topographically suitable for irrigation. Investigations show that the climate and soil conditions are suitable for sugar cane, rice, cotton, safflower and various oil seeds. The economic production of these and other crops, as well as the possible use of such irrigation areas for fattening of cattle, is being examined at the Kimberley Research Station on the Ord River.

3. *Water Supply Schemes.*—(i) *Metropolitan.* Particulars relating to the Metropolitan Water Supply are given in § 5 of Chapter XIX., Local Government.

(ii) *Goldfields and Agricultural Water Supply.* Western Australia has one of Australia's most spectacular water supply schemes, and a brief account of its development will be found on page 1134 of Official Year Book No. 37. Mundaring Reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the Eastern Goldfields and has a capacity of 62,560 acre feet and a catchment of 569 square miles. The water passes through 346 miles of main, mostly steel and 30 inches in diameter, equipped with eight pumping stations.

Maximum pumping capacity from No. 1 Pumping Station at Mundaring Reservoir is nominally 15.9 million gallons a day. The total capacity of all receiving, regulating, standby and service tanks along the main pipe line is 154 million gallons which includes three standby reservoirs at Kalgoorlie having a combined capacity of 60 million gallons.

Hundreds of miles of branch pipe lines have been laid to mining areas, agricultural areas and country towns, a notable one being the Norseman extension of 101 miles. The system serves some 74 towns and water is reticulated to over 2,000,000 acres of mixed farming lands. The total length of pipe lines is 2,756 miles and the number of services is 21,799. The total quantity of water pumped from Mundaring in 1958–59 was 3,002 million gallons. The total cost of the scheme to the State Government to the end of 1958–59 was £11,856,953. Under the terms of the Comprehensive Water Supply Scheme the Commonwealth Government has contributed a further £2,196,486 making a total cost of £14,053,439.

District water supply schemes established for the purpose of supplying certain country towns and mixed farming lands have been absorbed into the Goldfields and Agricultural Water Supply Scheme. For further particulars see Official Year Book No. 37, page 1135.

(iii) *Comprehensive Water Supply Scheme.* A comprehensive water supply scheme to supplement water supplies to the goldfields, agricultural areas, and country towns, authorized in 1947 as a joint work between the Commonwealth and State and estimated to cost £10,000,000 is at present (1959) under construction in two main parts. The northern section is an enlargement and extension of the Goldfields and Agricultural Water Supply. The southern section is the Great Southern Towns Water Supply. Linked with Wellington Dam (initially an irrigation work on the Collie River) by 80 miles of 30-inch diameter pipe through three pumping stations to Narrogin, it now supplements the existing water supplies to country towns along the Great Southern Railway, north to Brookton and south to Katanning. The raising of the impounding wall of Wellington Dam to increase its storage to about 150,000 acre feet is in progress. Expenditure on the Scheme to 30th June, 1958, amounted to £6,618,037.

(iv) *Local Water Supplies.* Local schemes other than above comprise those in the remaining agricultural and mining areas, including the North-West and Kimberley Divisions. Sixty-two separate reticulated water supplies serve country towns and districts. Of these, 55 are controlled by the Water Supply, Sewerage and Drainage Department and the remainder by local authorities.

(v) *Commonwealth and State Government Railways.* Railways of the Commonwealth and State Governments make independent provision for supplies of water for their own purposes, although considerable additional quantities are consumed by the Railways from other sources, e.g., Public Works and Metropolitan Water Supply Departments.

(vi) *Catchments.* The water supplies to these country schemes come from stream flow, dams, tanks, wells and bores.

A total of 66 rated stream gauging stations is operating in the South-West and Kimberley Divisions. Three types of catchment peculiar to this State developed in connexion with local water supplies and deserving special mention are:—rock catchments, which consist of mostly clear granite out-cropping rock, from which the overall run-off from rain amounts to approximately 40 per cent.; bituminous catchments, which are areas which have been sealed with emulsified bitumen—some hundreds of acres have been so treated and yield a run-off of approximately 80 per cent. of the rainfall; and roaded catchments, where selected areas of a catchment are cleared, graded and formed into roads to assist in obtaining additional rainfall run-off.

4. *Underground Water.*—Individual farmers, orchardists, market gardeners and others pump ground water from wells and bores, using windmills, engines or electric power. Water is also obtained from artesian and sub-artesian bores. The Public Works Department hires out to local authorities boring plants which are then hired out to farmers to assist their boring operations. In addition, the department operates its own boring plants and contracts with private firms in connexion with water supply works.

Considerable advances in the knowledge of aquifers and quality of water in the main sedimentary basins have been made as a result of the extensive geological surveys in connexion with oil exploration during the past ten years and most of these results are now in the course of publication. In view of the importance of finding water for towns and farms in low rainfall areas outside the sedimentary basins, the Geological Survey of Western Australia and the Commonwealth Bureau of Mineral Resources recently combined to apply geophysical prospecting to the search for water in weathered granites in the south-western part of the State. The results of this work so far have been promising.

§ 7. Tasmania.

1. *General.*—(i) *Rainfall.* Brief particulars of the rainfall pattern in Tasmania are given on page 1136 of Official Year Book No. 37. (See also Chapter II.—Physiography, page 45 of this Year Book.)

(ii) *Main Purposes of Conservation and Utilization.* Owing to Tasmania's fortunate rainfall position, scarcity of water is not a serious problem in normal seasons. Conservation of water for hydro-electric generation is the predominant interest, and conservation for domestic and industrial purposes is more important than irrigation. Conservation of water on farms is not practised to the same extent as on the mainland, probably because running streams and good rainfall are on a more generous scale. Provision of artificial storages (apart from house tanks) is rare, but progressive landowners are beginning to take advantage of modern plant, such as bulldozers, to provide small excavated storages on their properties. Underground water is of poor quality but a small quantity, which has been exploited to a limited extent by bores and windmills, exists over an area in the Midlands. Geological conditions do not appear to favour the utilization of underground water except on a minor scale.

(iii) *Administration.* On 1st September, 1958, a Rivers and Water Supply Commission was brought into operation with control over all natural waters. The Commission does not own the waters but may take them subject to existing rights, of which the most important are riparian rights. In addition to licensing the use of water, the Commission supervises

the construction of municipal water supply schemes which was previously a function of the Water, Sewerage and Drainage Board. It has similar functions in relation to river improvement and irrigation.

2. Hydro-electricity.*—Tasmania depends entirely on water for power development. The Hydro Electric Commission, the authority controlling the generation of electricity in Tasmania, conducts a continuous survey of the water power resources of the State assisted by modern methods such as aerial photography and geophysical exploration.

Much of the water potential is located on the Central Plateau with an area of about 1,500 square miles at an altitude of from 2,000 to 4,000 feet and subject to rainfall of from 30 inches a year in the east to 80 inches on the western perimeter. On the plateau are a large number of lakes which provide the means for storage at low cost. These include Great Lake with an area of 58 square miles, Lake St. Clair and Lake Echo each more than 12 square miles, and others of smaller area.

The Derwent River and its tributaries which flow south-easterly carry off by far the greater part of the water which falls on the plateau and these rivers are therefore the most abundant source of power. They have been the cheapest to develop to date and most of the existing generating stations are located on them.

The three main rivers running westerly from the plateau—the Arthur, Pieman and Gordon—have only a small portion of their catchment areas at high level, but they run through regions of high rainfall and their power potentials are considerable. However, because of inaccessibility and climate, development of these rivers may be rather expensive and has been deferred so far in favour of more convenient schemes.

Rivers draining from the plateau towards the north and north-west coast, including the Emu, Forth and Mersey, have small catchments at high levels and no natural storages.

Two other important water power sources, independent of the Central Plateau, are the South Esk River in the north and the Huon River in the south. A power station at Trevallyn, near Launceston, utilizes water from the South Esk. The Huon has a large low-level catchment in the high-rainfall area near the west coast. Storage could be provided on this river at a reasonable cost and, because of its proximity to Hobart, a future power station would have considerable value for peak load development.

3. Industrial.—Three principal industrial schemes have been installed privately. Australian Newsprint Mills Ltd. pump approximately six million gallons a day from the Derwent River at Lawitta for the Boyer Mills. Associated Pulp and Paper Mills Ltd. pump several million gallons a day from the Emu River at Burnie, and Titan Products Pty. Ltd. reticulate water from Chasm Creek to their factory at Heybridge. In addition, the State has constructed a regional water scheme to serve the Australian Aluminium Production Commission's plant at Bell Bay on the River Tamar and to supply several municipalities with bulk water for domestic and industrial purposes.

A second regional water scheme draws water from the River Derwent at Lawitta to provide domestic and industrial supplies in five southern municipalities. Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State which is largely unsettled. Diversion to the eastern side of the watersheds is not regarded as practicable.

4. Irrigation.—There are no State irrigation projects at present, but the Rivers and Water Supply Commission is investigating the possibility of establishing a scheme in the Coal Valley. Preliminary investigations have also been made in the Jordan Valley. The Water Act 1957 provides for irrigation works to be undertaken by municipalities and by Trusts constituted for the purpose, but no such works have been undertaken to date. All systems operating are privately owned, and with one exception (at Bushy Park) are single-farm units. At Bushy Park, a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder comprises areas devoted to vegetables and served by municipal water supplies. Irrigation in Tasmania was applied in 1958–59 to 13,431 acres devoted to: hops (1,292 acres); fruit (1,737 acres); pastures (7,502 acres); green fodder, etc. (782 acres); and other crops (2,118 acres).

* See also Chapter VII.—Electric Power Generation and Distribution, p. 235.

§ 8. Northern Territory.

1. **Climate and Topography.**—Some particulars of the climate and main topographical features of the Northern Territory are given on page 1138 of Official Year Book No. 37 and in this issue information on climatic conditions will be found in Chapter II.—Physiography, and a brief outline of contour and physical characteristics in Chapter V.—The Territories of Australia.

2. **Administration.**—Under the Control of Waters Ordinance 1938-1959 of the Northern Territory, natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under prescribed conditions. There is a Water Use Branch in the Northern Territory Administration under the control of a Director. The functions of the Branch include systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies, flood prevention and control.

3. **Underground Water.**—The marked seasonal rainfall over the whole of the Northern Territory is one of the basic factors affecting the pastoral industry which provides the bulk of the Territory's income. The inadequacy of surface water during the dry season underlines the importance of underground water supplies in the Territory where most of the cattle population is dependent on underground supplies for three to five months each year.

Rainfall is one of the factors controlling cattle population but geological features, controlling both soils and the storage of underground water, are even more important. In the northern-most portion of the Territory, which receives from 25 to 60 inches of seasonal rainfall a year, surface water supplies are, in general, adequate for the pastoral industry. Despite this, however, this area has a comparatively low carrying capacity for cattle and the pastoral industry is concentrated more in inland areas where feed retains more nutritive value in the winter despite dry conditions.

South from this well-watered northern-most portion, the Territory becomes progressively drier, with an annual average rainfall of only five inches at the margins of the Simpson Desert in the south-east corner. In the lighter rainfall areas, the search for potable underground water becomes exacting but, in general, the regions providing the best pastures—the Ord-Victoria Region, the Barkly Tablelands and smaller areas in the Alice Springs district—provide also sub-surface conditions suitable for the storage of water. This comes about largely because, in these areas, both pasture and water are related to flat lying or gently folded limestones or volcanics of Upper Proterozoic or Cambrian age, overlying the basement of older, more tightly folded, metamorphic rocks and granites which crop out over wide areas within the Territory.

In the Ord-Victoria Region, the best grass lands overlie volcanic rocks and extend over some 10,000 square miles. Ground water is obtained in shallow bores averaging 70 to 80 feet in depth and producing small supplies which range up to 1,500 gallons an hour. For the most part, water is stored in joints, faults or cracks in the rocks although in places sub-artesian conditions pertain and, on the whole, selection of bore sites is difficult. There are also small sedimentary basins in the region, some of which yield sub-artesian, and in places, artesian water and provide areas of good pastures.

The Barkly Tablelands, which extend into Western Queensland, overlie flat-lying limestone, sandstone and shale of the Barkly Basin. In most places, underground water is under pressure (sub-artesian) but no flowing bores are known. Sandstones and beds of limestone with fractures and solution cavities provide a number of aquifers within the Basin. The hydraulic surface (to which pressure water will rise in bores) ranges between 500 and 600 feet above sea level and adequate supplies for the watering of stock are available at depths ranging from 150 to 400 feet from the surface. The water from over 90 per cent. of the bores is suitable for stock and over 50 per cent. of it is suitable for human consumption. Investigations by the Commonwealth Bureau of Mineral Resources indicate that underground water supplies will be more than sufficient for the future development of the pastoral industry on the Tablelands.

Considerable research has been undertaken in the last three years into increasing the Alice Springs water supply from alluvial basins and provision of a water supply for the mining town of Tennant Creek from the Cabbage Gum Basin, a small basin in deeply weathered Precambrian rocks, 15 miles south of the town.

Similar basins to the Cabbage Gum probably occur in the Territory, south of Alice Springs. If present tests of the Cabbage Gum Basin are successful, it is possible that greater supplies of water than previously expected may be discovered in this area.

A review is being made of the information available concerning the number of bores and wells sunk in the Territory. Up to September, 1959, 1,871 bores and wells had been registered. Of these, 883 were on pastoral properties, 47 on native reserves, 13 for town water supplies and six on mining fields. The number of registered stock route bores established by the Government is 176.

4. **Irrigation.**—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Some water is drawn from the rising main between Manton Dam and Darwin for irrigation purposes, but the trend is for properties in this area to develop their own water supplies, either by boring or by pumping from watercourses or lakes. Investigations for a further dam site to augment Darwin's water supply and to provide reticulated water to properties without natural waters are expected in the near future. Hydrological investigations are being carried out by the Administration and a public company to determine the supply of water and the best methods of control and use in the potential rice-growing areas of the Territory. A total of 86 gauging stations has been established in the Territory. They are of various types, namely long-term automatic, short-term automatic, staff gauge-daily readings, and staff gauge-intermittent readings, of which 24 are associated with proposed rice growing areas. The remaining gauging stations have been located to assess the river water potential of the Territory. A further 70 stations are planned for installation over the next two years. Agricultural activity in the Territory is not extensive, being confined to the Darwin, Adelaide River, Coomalie Creek, Daly River, Katherine River and Alice Springs areas with only small acreages being utilized.

The Katherine River appears to offer irrigation potentialities on the level soil below the township. Approximately 14 properties in and around Katherine are at present drawing water from the Katherine River for irrigation purposes, vegetables and pastures being the usual crops grown. The Katherine River passes through a gorge upstream of the town under conditions which appear suitable for dam construction. The Administration and the Commonwealth Scientific and Industrial Research Organization are investigating the potentialities of the Katherine area for agricultural production. The Administration is preparing a programme of extension work into saline water conversion under Territory conditions. For further particulars, *see* page 1138 of Official Year Book No. 37.

§ 9. Papua and New Guinea.

1. **Rainfall.**—Rainfall in Papua and New Guinea varies considerably from approximately 250 inches near Lindenhafen (New Britain) and 231 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua).

2. **General.**—For a general description of these territories *see* Chapter V.—The Territories of Australia, page 129, of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet. However, complete data regarding water resources are not available.

The largest rivers in the Territory include the Fly (a description of which is given in Chapter XXVI. of Year Book No. 40), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles) and the Markham (110 miles).

The main water conservation interest in New Guinea at present is the hydro-electric potential which is extensive. An outline of schemes at present in operation is given in the previous chapter.

CHAPTER IX.

POPULATION.

NOTE.—The figures shown throughout this chapter for the Census of 30th June, 1954, are the final results, and population estimates shown for the intercensal period 1947 to 1954 are revised figures which have been adjusted in accordance with these results.

In general, the remaining statistics in this chapter cover the year 1959. More detailed figures will be found in the annual bulletin, *Demography*.

§ 1. Population Statistics.

Population statistics relating to Australia or to the component States and Territories as at specific dates are of two types—

- (i) *Those ascertained by census enumeration.* These results attain a very high degree of accuracy and may generally be accepted without reservation.
- (ii) *Estimates derived by the application of vital and migration statistics to census data.* In general, three estimates are made for any specific date:
 - (a) Original estimates for dates subsequent to a census made before another census is taken. These estimates represent the population ascertained at the Census, plus natural increase and recorded net migration since the Census. As complete records of interstate migration are not available, the estimated State or Territory populations so derived are approximate, and are subject to revision when the actual population of each State or Territory is ascertained at the next Census. For some States such revisions were substantial after the Census of 1954.
 - (b) Two-stage revision of the original estimates for each newly completed intercensal period to adjust for the difference between the new census result and the comparable estimate. This is to bring intercensal estimates into line with the two census populations and thus effect adjustment for unrecorded movement of population in the intercensal period. The first revision is reconciled with preliminary census results and the second revision with final census results.

Final revised figures become the permanent population estimates. For purposes requiring a mean population for any twelve-month period such mean is calculated as described in § 4. As populations at specific dates are used in these calculations, consequential revisions are made in mean populations when the estimates for specific dates are revised as described above.

In accordance with this policy, all Australian population statistics shown in this issue of the Official Year Book for dates up to 30th June, 1954, and all mean populations for calendar years up to 1953 and financial years up to 1953–54 are final. Population statistics for dates or years subsequent to these are subject to revision when another census is taken.

Since the establishment of the Commonwealth Bureau of Census and Statistics, the populations of the States and Territories have been estimated in a comparable manner and attention has been given to the improvement of the basic demographic data from which the estimates are compiled. The principal source of error in early estimates lay in the migration records, both overseas and interstate, and efforts were directed towards their improvement. The 1911 Census disclosed an error in the precensus estimates equivalent to proportions of 14.5 per cent. and 10.0 per cent., respectively, of recorded male and female overseas departures from Australia. These proportions were used as adjusting factors to recorded overseas departures during the intercensal period 1911–21. These adjusting factors were reduced after the 1921 Census to 1 per cent. for males and 4.5 per cent. for females and were discontinued altogether after the 1933 Census. From the results of the 1954 Census, it appears that the accuracy of the records of overseas migration is such that, in future, little adjustment to recorded figures will be necessary for Australia as a whole.

It is improbable that the same degree of accuracy as has been attained in the record of overseas migration can be reached in the case of interstate movements. Records are made of interstate passengers by sea, rail and air, but it is impracticable, with occasional important exceptions, to record the movements by road.

§ 2. The Census.

1. **Census-taking.**—Although “musters” of the population were carried out at least annually from 1788 to 1825, the first regular census in Australia was not taken until 1828, when a count of the population of the Colony of New South Wales was made. Subsequent censuses were taken sporadically in the various colonies until 1881, when a census was taken on the same date throughout Australia.

In 1891 and 1901, census-taking was still in the hands of the Government Statisticians of the States, but, in 1911, under the provisions of the Commonwealth Census and Statistics Act, which provides for the enumeration to be made from one centre instead of by each State as formerly, the Commonwealth Statistician undertook the first census of the Commonwealth of Australia. The second was taken in 1921, the third in 1933, the fourth in 1947 and the fifth in 1954.

2. **Population recorded at Censuses.**—State and Territorial populations recorded at the Australia-wide censuses taken over the period 1881 to 1954 are shown in the following table. The figures relate to the political boundaries of the several States (or Colonies) and Territories as they existed at the date of each census, except that the Northern Territory has been shown separately from South Australia for three censuses prior to its transfer from that State. The years of formation of the separate Colonies and transfer of the Territories are shown in Chapter 1, § 4 and § 5. The total populations recorded at the censuses taken in the Colonies from 1828 to 1876 were shown in Official Year Book No. 40, page 326.

(a) Part of New South Wales prior to 1911.

The final results of the 1954 Census of the Australian External Territories will be found in § 13 of this chapter.

3. **Increase since 1881 Census.**—The increases in the populations of the several States and Territories and of Australia as a whole during the last seven intercensal periods are shown in the following table, which distinguishes the numerical increases, the proportional increases (which do not allow for the differences in the length of the intercensal periods) and the average annual rates of increase.

POPULATION: INTERCENSAL INCREASES.

NOTE.—Minus sign (—) denotes decrease.

§ 3. Growth and Distribution of Population.

1. **Growth of Population.**—The table which follows shows the growth in the population of each sex in the various States and Territories as measured by the estimated population at 31st December in 1880 and thereafter at decennial intervals to 1950. Each year from 1954 to 1959 is included in order to show recent growth in greater detail.

ESTIMATED POPULATION: 1880 TO 1959.

(a) Northern Territory figures included with South Australia prior to 1900. (b) Part of New South Wales prior to 1911. (c) Includes all defence personnel enlisted in Australia irrespective of movements subsequent to enlistment. (d) Revised estimates based on the June, 1957 Population Count of Canberra are as follows:—1954, males 16,458, females 14,848, persons 31,306; 1955, males 17,615, females 16,345, persons 33,960; 1956, males 19,553, females 17,275, persons 36,828.

Estimates of population for intercensal years are obtained in the manner outlined in § 1.

The estimated population at 31st December each year from 1788 to 1946 on the same basis as in the table above was shown in *Demography*, Bulletin No. 67, 1949 and for the period 1881 to 1958 in *Demography*, Bulletin No. 76. A graph illustrating the growth of the population of Australia and of each State and Territory appears on page 299.

2. **Present Numbers.**—The population of Australia at 31st December, 1959, was estimated at 10,166,173 persons, of whom 5,136,247, or 50.52 per cent., were males and 5,029,926, or 49.48 per cent., were females. The increase during 1959 was 214,555, equal to 2.16 per cent., males having increased by 106,972, or 2.13 per cent., and females by 107,583, or 2.19 per cent. This increase was the result of an excess of births over deaths of 137,764, and a net gain by migration of 76,791 persons.

3. **Proportion of Area and Population, Density and Masculinity.**—The previous table shows the number of persons in each of the States and Territories at 31st December, 1959. In the following table the proportions of the total area and of the total population represented by each State and Territory are given, together with the density and the masculinity of the population.

DENSITY AND MASCULINITY OF POPULATION, 1959.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

State or Territory.	Proportion of Total Area. (Per cent.)	Proportion of Estimated Population, 31st December, 1959. (Per cent.)			Density. (a)	Masculinity.(b)
		Males.	Females.	Persons.

Australia	100.00	100.00	100.00	100.00	3.42	102.11

(a) Number of persons per square mile.

(b) Number of males per 100 females.

Additional information regarding density and masculinity of population appears in later sections of this chapter.

4. **Urban and Rural Distribution.**—Particulars of the distribution of the population amongst metropolitan urban, other urban and rural areas in each State and Territory are available only from a census. Particulars of the distribution at the 1947 Census were shown in Official Year Book No. 39, pages 521–524.

At the Census of 30th June, 1954, the number of persons and the proportion of the total population of Australia in each division were:—metropolitan urban 4,845,230, 53.92 per cent.; other urban 2,230,039, 24.81 per cent.; rural 1,887,892, 21.01 per cent. migratory population, 23,369, accounted for the remaining 0.26 per cent.

Of the States, Victoria had the largest proportion of population residing in the metropolitan area (62.15 per cent.) but was closely followed in this respect by South Australia (60.66 per cent.). Percentages for the other States were:—Western Australia, 54.50; New South Wales, 54.42; Queensland, 38.10; and Tasmania, 30.84.

A feature of the metropolitan population is its higher femininity as compared with the population of extra-metropolitan areas. In 1933, 52.5 per cent. of the metropolitan population was composed of females; in 1947, the proportion had fallen slightly to 51.9 per cent., being highest in Tasmania at 52.3 per cent; at the Census of 30th June, 1954, the proportion had fallen to 51.0 per cent., there being little difference in the proportions as between the several States. The proportion of females in extra-metropolitan areas was between 46 per cent. and 48 per cent. at each of these three censuses.

Metropolitan Urban Divisions include the capital cities of the States and (included in 1954 for the first time) Canberra, the capital city of Australia, the boundaries of the capital cities being determined for census purposes by the Statisticians of the States in collaboration with the Commonwealth Statistician, and normally include the city proper and all contiguous urban areas. In order to conform to the growth of the metropolitan urban population, the boundaries are reviewed at each census and adjustments made, wherever necessary, to embrace contiguous urban areas that have developed since the previous census. Amendments were made prior to the Census of 1954 to the boundaries of the Metropolitan Urban Divisions in New South Wales, Victoria and Tasmania.

Other Urban Divisions comprise Darwin, the capital city of the Northern Territory, all separately incorporated cities and towns, and all other towns with a population of 1,000 persons or more (750 in Tasmania), outside the Metropolitan Urban Divisions. The inclusion in the Other Urban Divisions in 1954 of the larger towns not separately incorporated was a significant departure from the classification adopted at previous censuses, when these towns (in all States except Tasmania) were included in the Rural Divisions, and the Other Urban Divisions (or Provincial Urban Divisions) were restricted to provincial separately incorporated cities and towns only.

Rural Divisions comprise the remaining portions of each State and Territory, and are affected by the intercensal changes in the areas of the Metropolitan Urban and Other Urban Divisions. As already mentioned, the Rural Divisions in 1954 exclude the towns of 1,000 persons or more (750 in Tasmania) which were not separately incorporated.

The term "Migratory" refers to persons, not elsewhere enumerated, who at midnight between 30th June and 1st July, 1954, were travelling on ships in Australian waters or on long-distance trains or aircraft.

As particulars of the population in urban and rural divisions for the 1947 Census are not directly available on the basis of the 1954 composition of these divisions, adjustments have been made to the 1947 figures in order to provide approximate comparisons with 1954 for the purposes of the following table. Adjustments to 1947 Metropolitan figures have been made in New South Wales, Victoria, Tasmania and the Australian Capital Territory, while in all States and in the Northern Territory adjustments have been made to allow for the transfer of towns of 1,000 persons or more from Rural to Other Urban.

URBAN AND RURAL POPULATION(a): CENSUS, 30th JUNE, 1954.

(f) June, 1959, Population count of Canberra.

7. **Urban Areas Outside Metropolitan Areas.**—The proportion of the total population of each State which was located in incorporated urban provincial areas at the 1933 and 1947 Censuses was shown in Official Year Book No. 39, pages 522–3. In Official Year Book No. 40, page 334, a table was given showing aggregate population at the 1947 Census of all cities and towns outside the metropolitan area of each State with 2,000 or more and 3,000 or more inhabitants, irrespective of whether such centres were incorporated separately or not. In addition, the proportion of the aggregate population of these cities and towns to the total population of the State was shown. The following table shows similar particulars for the 1954 Census.

**AGGREGATE POPULATION OF CITIES AND TOWNS OF SPECIFIED SIZE:
CENSUS, 30th JUNE, 1954.**

(EXCLUDING FULL-BLOOD ABORIGINALS.)

State or Territory.	Cities and Towns outside Metropolitan Area with Population of—					
	2,000 and over.			3,000 and over.		
	Number.	Population.	Proportion of Total Population.	Number.	Population.	Proportion of Total Population.
			%			%
New South Wales(a) ..	98	881,391	25.75	67	806,373	23.55
Victoria	56	415,690	16.95	40	376,347	15.35
Queensland	41	404,520	30.69	29	374,328	28.40
South Australia ..	14	74,502	9.35	9	62,008	7.78
Western Australia(b) ..	13	82,139	12.84	7	67,440	10.54
Tasmania	8	89,003	28.83	6	84,312	27.31
Northern Territory ..	2	10,856	65.92	1	8,071	49.01
Australian Capital Territory (c)
Total	232	1,958,401	21.79	159	1,778,879	19.79

(a) Excludes that part of Liverpool Municipality outside the Metropolitan Area of Sydney.

(b) Excludes that part of Fremantle suburbs outside the Metropolitan Area of Perth. (c) The only city or town is Canberra, the capital city of Australia, classed as metropolitan.

In the foregoing table, "Urban Areas" comprising two or more Local Government Areas or portions thereof are treated as units. The "Urban Areas" so treated are: in New South Wales, Newcastle; in Victoria, Ballarat, Bendigo, and Geelong; in Western Australia, Kalgoorlie; and in Tasmania, Launceston. The figures in each instance include the populations of the adjoining areas which, together with the city proper, constitute the entire "Urban Area".

The numbers of towns of 2,000 or more inhabitants in New South Wales and Victoria, and of 3,000 or more in New South Wales, show considerable decreases as compared with the figures for the 1947 Census. This is due to the absorption, by the increased metropolitan areas, of towns within these ranges which were formerly outside the metropolitan limits, and, in New South Wales, to similar absorptions by the City of Blue Mountains, Greater Wollongong and Newcastle Urban Area.

8. **Principal Cities in the World.**—The following table shows the population of the world's largest cities at the latest available date:—

POPULATION OF THE WORLD'S LARGEST CITIES.

§ 4. Mean Population.

1. **General.**—Mean populations are calculated for twelve-month periods to provide a satisfactory average basis for calculations requiring allowance for the continuous change in population figures during such periods.

2. **Method of Calculation.**—From 1901 onwards the mean population for any year has been calculated by the formula:—

$$\text{Mean Population} = \frac{a + 4b + 2c + 4d + e}{12}$$

where a , b , c , d and e , respectively, are the populations at the end of the quarter immediately preceding the year and at the end of each of the four succeeding quarters; e.g., in the case of a calendar year, 31st December of the preceding year and 31st March, 30th June, 30th September and 31st December of the year under consideration. This formula gives a close approximation to the mean of a theoretical population progressing smoothly through the five values a , b , c , d , e .

3. Results.—(i) *Calendar Years.* The following table shows the mean population of each State and Territory for the calendar years 1950 to 1959:—

MEAN POPULATION: CALENDAR YEARS.

(a) Revised estimates based on the June, 1957 Population Count of Canberra are as follows:—1955, 31,411; 1956, 34,132; 1957, 36,749.

§ 5. Elements of Increase.

1. *Natural Increase.*—(i) *General.* The two factors which contribute to the growth of a population are the "natural increase", i.e., the excess of births over deaths, and the "net migration", i.e., the excess of arrivals over departures. In earlier issues of the Official Year Book, particulars of the natural increase from 1861 were given for each sex and for each State and Territory (see No. 22, p. 899). Figures for more recent years will be found in *Demography*, Bulletin No. 76.

During the present century, the rate of natural increase grew until it reached its maximum at a rate of 17.44 per thousand of mean population in 1914, but it steadily declined after that year to 7.07 in 1934. There was little change until 1939, but during the war and in the post-war period the rate rose sharply, reaching 14.37 in 1947. In 1959 the rate was 13.69.

In the following table particulars of the natural increase in each State and Territory are given for each sex for each five-year period from 1926 to 1955 and for each of the years 1955 to 1959.

POPULATION: NATURAL INCREASE (EXCESS OF BIRTHS OVER DEATHS).
(EXCLUDING FULL-BLOOD ABORIGINALS.)

(a) Excess of births over civilian deaths from September, 1939 to June, 1947. (b) Excess of, births over deaths per 1,000 of mean population. (c) Excess of births over civilian deaths per 1,000 of mean population from September, 1939 to June, 1947. (d) Rates based on the revised estimates of mean population for the Australian Capital Territory consequent on the June, 1957, Population Count of Canberra are as follows:—1955, 22.45; 1956, 25.74; 1957, 25.42.

NOTE.—Minus sign (—) denotes excess of deaths over births.

During the first five years of the present century, the average annual increment to the population of Australia by natural increase was 56,886 persons. The increment rose to 81,695 persons a year in 1921-25, but thereafter fell to 52,650 in the five years 1931-35. During 1941-45, the average annual excess of births over civilian deaths was 74,750, while during 1951-55 the annual excess of births over deaths was a record high average of 119,940. The excess for the year 1959 was 137,764.

A graph showing the rate of natural increase for each year from 1860 to 1959 will be found on page 336.

(ii) *Comparison with other Countries.* Australia has a higher rate of natural increase than most European countries, owing to the fact that it has both a higher birth rate and a lower death rate. The following table gives a comparison between the rate of natural increase in Australia and that in some of the principal countries for which such information is available.

NATURAL INCREASE OF POPULATION: VARIOUS COUNTRIES.

NOTE.—Minus sign (—) denotes decrease.

2. **Recorded Net Interstate and Oversea Migration.***—The other factor of increase in the population, namely, the excess of arrivals over departures, known as "net migration", is, from its nature, much more subject to variation than is "natural increase".

Particulars of the increase by net migration are given below for five-year periods from 1926 to 1955 and for each of the years 1955 to 1959.

POPULATION: INCREASE BY RECORDED NET INTERSTATE AND OVERSEA MIGRATION.(a)

(a) Excess of arrivals over departures. Interstate migration relates to recorded movements by rail, sea and air and to certain special movements by road, together with an allowance for unrecorded movement into the Australian Capital Territory. (b) Excludes troop movements from September, 1939 to June, 1947. (c) Excludes interstate migration from July, 1943 to June, 1947. (d) Revised figures of net migration consequent on the June, 1957 Population Count of Canberra are as follows:—1955, males 800, females 1,119, persons 1,919; 1956, males 1,481, females 477, persons 1,958; 1957, males 773, females 547, persons 1,320.

NOTE.—Minus sign (—) indicates excess of departures over arrivals.

* The subject of overseas migration is dealt with at some length later in this chapter (see p. 315).

In the five years ended 1935, there was a net emigration of 10,886 and, in the five years ended 1940, a net immigration of 43,128. During the war period 1941-45 net immigration fell to 7,809 persons. In 1946, there was a net loss by migration of 15,148 persons, due mainly to the departure of refugees and evacuees, and also fiancées, wives and children of British and Allied servicemen but with increasing transport facilities and the resumption of assisted migration there was a net gain of 10,611 in 1947, which increased rapidly to 55,115 in 1948, 150,001 in 1949 and 152,505 in 1950. This large net gain was due in great measure to the arrival of successive contingents from Australia's quota of 176,000 former European displaced persons, of whom 156,491 had arrived by the end of 1950. As this flow diminished, it was partly offset by new schemes for assisted migrants, but by 1953, the total net gain from all sources during the year had fallen to 42,897. Since then it has risen, being 65,366 in 1958 and 76,791 in 1959. The net gains in each of the years 1949 to 1952 were the highest recorded for individual years with the exception of 1919, for which year troops returning from the 1914-18 War were included.

3. **Total Increase.**—The total increase of the population is obtained by combining the natural increase with the increase by net migration. For the period September, 1939, to June, 1947, deaths of defence personnel have been deducted from the total increase so derived. The results of the 1947 and 1954 Censuses disclosed some unrecorded movements of population during the intercensal periods, July, 1933, to June, 1947, and July, 1947, to June, 1954, and particulars of total increase, after taking into account deaths of defence personnel in the earlier period, have been adjusted for these discrepancies. However, no separate adjustment has been applied to individual elements of increase during the periods, although intercensal discrepancies disclosed by previous censuses were adjusted on recorded overseas departures.

The annual increments to the population for the years 1955 to 1959 are shown below together with the increases for each five years from 1926 to 1955. For the reasons stated in the previous paragraph, figures for the period 1933 to 1954 differ from the totals of figures for natural increase and net migration shown in preceding tables by an amount equal to the net total of deaths of defence personnel and unrecorded movements of population disclosed by the Censuses of 1947 and 1954.

(a) Includes recorded deaths of defence personnel, whether inside or outside Australia, from September, 1939 to June, 1947. (b) Excludes interstate migration from July, 1943 to June, 1947. (c) Revised figures based on the June, 1957 Population Count of Canberra are as follows:—1955, males, 1,157, females 1,497, persons 2,654; 1956, males 1,938, females 930, persons 2,868; 1957, males 1,267, females 1,019, persons 2,286.

4. Rate of Population Growth.—(i) *Australia.* The annual percentage rate of population growth is computed by the compound interest formula. The formula is as follows:—

$$P_1 = P_0 (1+r)^t$$

where P_0 and P_1 are the populations at the beginning and end of the period respectively, t is the number of years intervening and r is the annual rate of growth.

The annual rates of growth per cent., of population in Australia during each of the years 1950 to 1959 were as follows:—1950, 3.26; 1951, 2.65; 1952, 2.48; 1953, 1.87; 1954, 2.11; 1955, 2.45; 1956, 2.36; 1957, 2.25; 1958, 2.09; and 1959, 2.16.

The annual rate of population growth during the present century has been 1.69 per cent., but the results from year to year have deviated widely from this figure. In the following table the period 31st December, 1900 to 31st December, 1959 has been arranged into certain defined groups of years according to the occurrence of influences markedly affecting the growth of population:—

POPULATION: PERIODICAL RATES OF GROWTH.

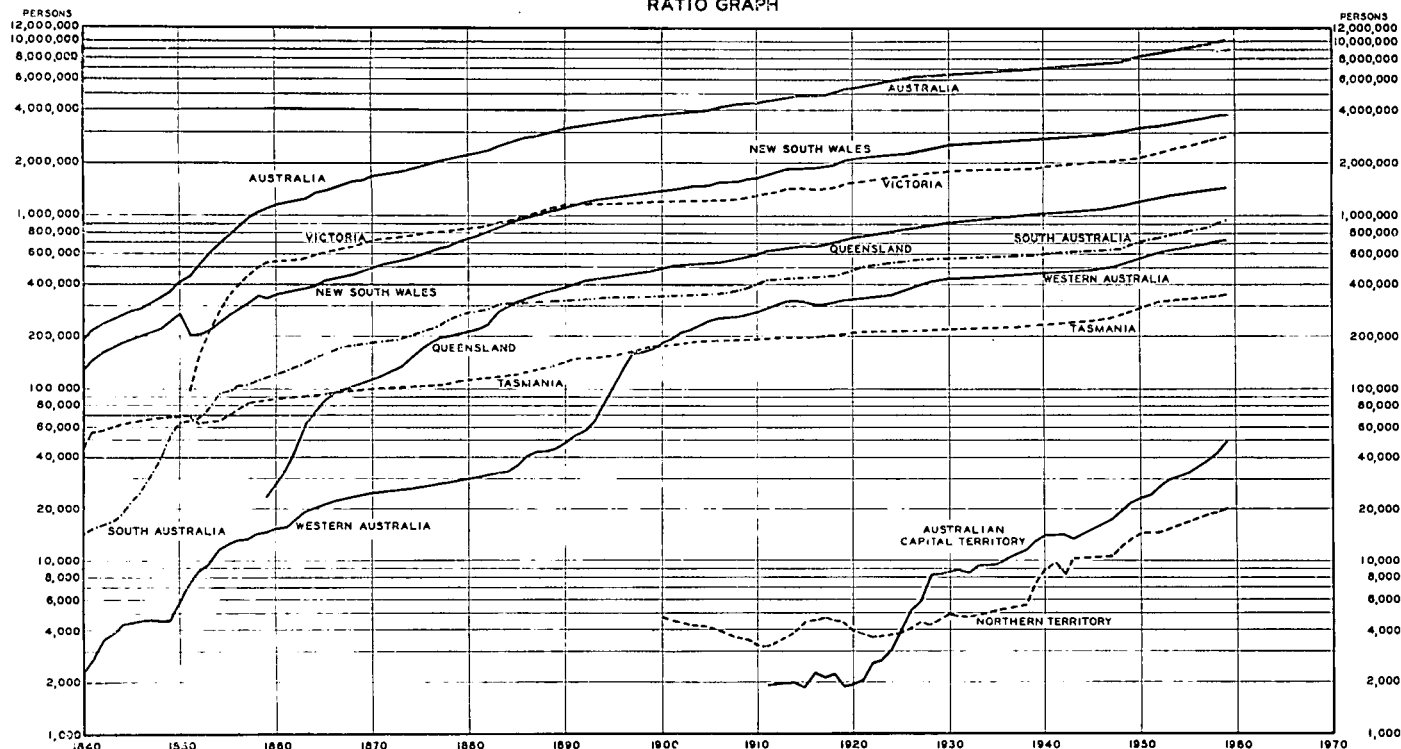

Period.	Interval. (Years.)	Total Increase. (‘000.)	Average Annual Numerical Increase. (‘000.)	Annual Rate of Population Growth. (Per cent.)		
				Natural Increase.	Net Migration.	Total.
1901 to 1913 ..	13	1,128	87	1.59	0.53	2.04
1914 to 1923 ..	10	862	86	1.50	0.15	1.64
1924 to 1929 ..	6	680	113	1.28	0.64	1.88
1930 to 1939(a) ..	10	569	57	0.82	0.03	0.85
1940 to 1946(a) ..	7	513	73	1.05	0.01	1.01
1947 to 1959(a) ..	13	2,648	204	1.47	1.05	2.35

(a) For the period September, 1939 to June, 1947, overseas movements of Australian defence forces have been excluded and deaths of members of these forces, whether occurring in Australia or overseas, have been included.

Up to 1913, the rate of natural increase was rising, and this factor, coupled with the impetus given to immigration from 1911 onwards by increased governmental assistance, was responsible for the comparatively high annual rate of 2.04 per cent. during this period. The 1914-18 War was a dominating influence in the decade 1914-23, and its effects can be

seen in the reduction of the rate from 2.04 to 1.64 per cent. From 1924 to 1929, more settled and prosperous conditions were experienced; encouraged migration was resumed on a large scale and, despite a further decline in the rate of natural increase owing to the persistent fall in the birth rate, the annual rate of growth rose to 1.88 per cent. After 1929 came the economic depression, and immigration ceased—in fact, Australia actually lost people through an excess of departures over arrivals in 1930, 1931, 1932 and 1935. The rate of natural increase also fell, and the annual rate of growth of the population fell to 0.85 per cent. With the outbreak of war in 1939, Australia entered a new phase in her demographic history, the full effects of which will not be seen for some time to come. The immediate effect of the war was to increase the number of marriages and to reverse the downward trend in fertility. The number of births increased each war year from 1940 to 1945, and these increases more than offset the rise in deaths due to war casualties and higher civilian death rates. As might be expected, migration over these years was negligible. The post-war period 1947 to 1959 was marked by a continued high natural increase and a resumption of immigration, the latter resulting in very high net gains in each of the four years 1949 to 1952. The annual rate of growth for the period 1947 to 1959 was 2.35 per cent.

Rates of population growth from 1881 are shown for each State and Territory of Australia in the annual bulletin, *Demography*.

(ii) *Various Countries*. Estimated rates of growth of the population of Australia in comparison with those for other countries are shown in the following table:—

NOTE.—Minus sign (—) denotes decrease.

§ 6. Density.

1. *General*.—From certain aspects, population may be less significant in respect of its absolute amount than in its relation to the area of the country. Australia, with an area of 2,971,081 square miles and an estimated population at 31st December, 1959, of 10,166,173, excluding full-blood aborigines, has a density of only 3.42 persons to the square mile, and is, therefore, the most sparsely populated of the civilized countries of the world. For the other continents and sub-continents, the densities in 1958 were approximately as follows:—Europe (excluding U.S.S.R.), 220; Asia (excluding U.S.S.R.), 152; U.S.S.R. 24; Africa, 20; North and Central America, 27; and South America, 20. The population of Australia has thus about one-sixth of the density of that of South America and of Africa; about one-seventh of that of U.S.S.R.; about one-eighth of that of North and Central America; about one-forty-fourth of that of Asia (excluding U.S.S.R.); and about one-sixty-fifth of that of Europe (excluding U.S.S.R.).

On account of the large area of Australia and the unsuitability for settlement of much of the country, the density of population must necessarily increase slowly. In Australia as a whole, the figure has increased from 1.29 per square mile in 1901 to 3.42 in 1959. The rise in density from 1901 to 1959 in each State and Territory was:—New South Wales 4.45 to 12.25, Victoria 13.77 to 32.35, Queensland 0.76 to 2.17, South Australia 0.95 to 2.46, Western Australia 0.20 to 0.74, Tasmania 6.68 to 13.53, Northern Territory 0.01 to 0.04 and Australian Capital Territory 2.05 (in 1911) to 53.19. When comparing the density of population of the several States, consideration should be given to the average annual rainfall distribution in each State as an indication of the climatic influence upon probable population numbers. The proportion of the area of Australia receiving less than 10 inches of

rainfall is 38 per cent.; that of the various States is:—New South Wales, 20 per cent.; Victoria, nil; Queensland, 13 per cent.; South Australia, 83 per cent.; Western Australia, 58 per cent.; and Tasmania, nil.

2. **Main Countries of the World.**—Number and density of population of the more important countries of the world are shown in the following table. In some instances, more particularly in the cases of Asia and Africa, the numbers must be considered as rough approximations only. The figures for the individual countries and continents accord, in the main, with those in the Population and Vital Statistics Report for July, 1959, (Vol. XI, No. 3) which is published by the Statistical Office of the United Nations. Details relate, in most cases, to mid-year 1958 estimates but in a few cases these are not available and the latest estimate available has been used. The totals for the continents include countries and territories not listed in the table below and adjustments for over- and under-estimation and enumeration.

§ 7. General Characteristics.

1. **Sex Distribution.**—(i) *States.* The number of males to each hundred females has been adopted as a measure of the "masculinity" of the population. On pages 163–5 in Official Year Book No. 2 a table is included showing the masculinity of the population of each of the States for each year from 1796 to 1907. In issue No. 5, on page 123, the figures in this table for the years 1901 to 1907 were modified in accordance with the results of the 1911 Census.

With the exception of some dislocation arising from the two World Wars, there was a continuous diminution of the masculinity of the population until 1945. This resulted from the increasing proportion of the population in the higher age groups, in which females preponderate owing to their greater longevity, and from the general long-term fall in the birth rate. At the 1947 Census, the numbers of the sexes were practically equal, but there has since been an increase in masculinity owing to the higher birth rate and to the increase in the number of immigrants, the majority of whom are males.

The following table shows the masculinity of the population at five-year intervals from 1925 to 1950 and for each of the years 1955 to 1959:—

POPULATION: MASCULINITY, 1925 TO 1959.

(NUMBER OF MALES PER 100 FEMALES.)

At 31st December—	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T.	A.C.T.	Aust.
1925	104.09	99.71	110.94	102.02	115.76	100.90	297.61	132.37	104.24

(a) Excludes full-blood aboriginals.

(b) Excludes Maoris.

(c) White population only.

2. **Age Distribution.**—The age distribution of the population is obtained only at a census, but estimates, based on the census distribution and on births, recorded ages at death and recorded ages of migrants, are made for intercensal years.

Estimates for 30th June, 1958 and 1959, are shown in the following table. Particulars of the age distribution recorded at the 1947 and 1954 Censuses were published in Official Year Book No. 43, page 560.

POPULATION: ESTIMATED AGE DISTRIBUTION(a), AUSTRALIA.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

Age last Birthday. (Years.)	30th June, 1958.			30th June, 1959.

(a) Based on the age distribution at the Census of 30th June, 1954 (adjusted only for "not stated" ages) and on subsequent births, recorded ages at death and recorded ages of migrants.

The next table shows the change which has taken place in the age constitution of the population of Australia since 1871. Up to the 1954 Census, each successive census except that of 1921 had revealed a larger percentage of the population 15 years of age and over than had been recorded at the previous census. In 1954, however, the proportion of this age group dropped sharply to a level (71.5 per cent.) slightly below that of 1933, the proportion under 15 years showing a corresponding increase to 28.5 per cent. of the total population. The proportions at 30th June, 1959 were estimated to be 70.0 per cent. and 30.0 per cent. respectively.

(a) Estimate 30th June.

3. **Conjugal Condition.**—Of the total population of Australia at the 1954 Census, 46.9 per cent. had never married; 47.1 per cent. were married (including 1.4 per cent. married but permanently separated); 5.2 per cent. were widowed; and 0.8 per cent. were divorced. Between 1947 and 1954, the number never married increased by 17.7 per cent.; those married (including permanently separated) by 20.6 per cent.; the widowed by 10.2 per cent.; and the divorced by 31.8 per cent.

From the demographic point of view, the most important change in the conjugal condition of the population of Australia between 1947 and 1954 was the increase of 35.0 per cent. in never married persons under 15 years of age, which more than offset the continued decrease in never married persons aged 15 years and over. This decrease was, however, confined to females, as the number of unmarried males aged 15 years and over increased by 3.6 per cent. between 1947 and 1954. The proportion of married persons continued to increase, and in 1954 comprised 66 per cent. of the population 15 years of age and over who stated their conjugal condition, compared with 62 per cent. in 1947 and 54 per cent. in 1933.

The number of widowed females recorded in Australia in 1954 was 351,102, or more than three times as many as the number of widowed males. This disparity is the result of two influences. The first is the greater longevity of females coupled with the usually younger age at marriage; and the second is that a larger proportion of widowed males remarry.

NOTE.—Minus sign (—) denotes decrease.

4. **Birthplace.**—At 30th June, 1954, the Australian-born element of the population of Australia represented 85.7 per cent. as compared with 90.2 per cent. at the 1947 Census. The number of Australian-born increased by 864,893, or 12.7 per cent., between 1947 and 1954, while the oversea-born population increased by 542,279 or 72.9 per cent. The latter resulted mainly from the increase of 503,458 in the number of persons of European birthplace between 1947 and 1954—principally persons born in England (an increase of 96,819); Italy (86,265); Germany (50,855); Poland (50,021); and the Netherlands (49,861).

Although numerically less significant, the number of persons of Asian and African birthplace more than doubled during the intercensal period, but there was little change in the number of persons born elsewhere.

Of persons born outside Australia, 57 per cent. were males and 43 per cent. females.

POPULATION: BIRTHPLACES, AUSTRALIA, 1947 AND 1954.

5. **Period of Residence in Australia.**—This table classifies the immigrant population of Australia according to period of residence in Australia, and reflects the greatly increased rate of immigration since 1947. It shows that in 1954, of persons born outside Australia who stated their period of residence, 40.9 per cent. had resided in Australia for a period of less than 5 years, 53.9 per cent. for less than 8 years, and 56.2 per cent. for less than 15 years, compared with 5.7, 7.7 and 14.8 per cent. respectively at the previous Census in 1947.

6. **Nationality.**—At 30th June, 1954, 8,582,251 persons, or 95.5 per cent. of the Australian population, were of British nationality (consisting of 85.7 per cent. born in Australia and 9.8 per cent. born outside), compared with 99.5 per cent. in 1947 (90.2 per cent. Australian-born and 9.3 per cent. born outside Australia). Of the oversea-born population in 1954, 68.6 per cent. were British subjects, compared with 94.8 per cent. in 1947. The most numerous foreign nationals in Australia at 30th June, 1954, were:—Italian, 90,018 persons; Dutch, 53,458; Polish, 49,746; German, 31,448; Yugoslav, 18,124; Greek, 17,843; Ukrainian, 17,239; and Latvian, 17,225.

POPULATION: NATIONALITY (i.e., ALLEGIANCE), AUSTRALIA, 1947 AND 1954.

(a) "Irish" nationality is included with "British" nationality for the purpose of this table.

7. Religion.—At the 1921 Census, 92,258 persons in Australia, or 1.7 per cent., gave no reply to this question, but at the Censuses of 1933, 1947 and 1954, when the public was informed that there was no legal obligation to answer this question, 848,948 persons (12.8 per cent.), 824,824 (10.9 per cent.) and 855,819 (9.5 per cent.), respectively, gave no reply. Of males 10.3 per cent., and of females 8.7 per cent., did not state their religion in 1954.

Of those who stated their religion, the greatest numerical increase during the inter-censal period between 1947 and 1954 was recorded by Roman Catholic and Catholic combined. This group was followed closely by Church of England, and then Presbyterian, Methodist and Lutheran in that order. Amongst the denominations with the largest numbers of adherents, the greatest proportional increases were recorded by Roman Catholic and Catholic combined, 29.9 per cent.; Presbyterian, 17.0 per cent.; Church of England, 15.3 per cent.; and Methodist, 12.2 per cent. The largest proportional increase was that of the Lutheran denomination, 73.7 per cent.

At the 1954 Census, as at earlier censuses, 99 per cent. of those who stated their religion professed the Christian faith. Between 1947 and 1954, the number who stated they were of non-Christian religion increased by 50 per cent., while those specifically stating they had no religion decreased by 10 per cent.

NOTE.—Minus sign (—) denotes decrease.

8. **Industry.**—In the following table, the male and female populations of Australia are classified according to the industry in which they were usually engaged at the 1954 Census. Persons usually engaged in industry are regarded as being "in the work force," while the remainder of the population, which at the 1954 Census comprised 5,284,508 persons, is classified as not being in the work force. The term "in the work force" includes persons of all ages who are employers, self-employed or working on their own account, wage and salary earners and unpaid helpers engaged in industry. It also includes persons "not at work," i.e., those who stated that they were usually engaged in work, but were not actively seeking a job at the time of the Census by reason of sickness, accident, etc., or because they were on strike, changing jobs or temporarily laid off, etc.; also persons able and willing to work but unable to secure employment, as well as casual and seasonal workers not actually in a job at the time of the Census.

Persons who do not earn their living by doing work for monetary reward, such as children, housewives, full-time students, retired persons, pensioners and permanent inmates of institutions, are regarded as not being in the work force.

About 63 in every 100 of the male population and 19 in every 100 of the female population were in the work force, or, in other words, there were in 1954, 3.4 males to every female in the work force.

Of the total males in the work force, those engaged in Manufacturing represented the largest proportion, namely 28.0 per cent., followed in order by those in Primary Production, 16.1 per cent.; Commerce, 13.6 per cent.; Building and Construction, 11.3 per cent.; Public Authority (n.e.i.) and Professional Activities, 9.1 per cent.; and Transport and Storage, 8.4 per cent.

As with males, females in the work force were engaged mainly in Manufacturing, 26.9 per cent., followed in order by those in Commerce, 22.5 per cent.; Public Authority (n.e.i.) and Professional Activities, 22.1 per cent.; and Amusement, Hotels, Cafés, Personal Service, etc., 14.8 per cent.

Total	4,546,118	4,440,412	8,986,530	100.00

9. **Occupational Status.**—The term “occupational status” relates to the capacity in which persons are engaged in the various branches of industry.

While the numbers of employers and of persons self-employed at the 1954 Census showed increases of approximately 13 per cent. and 6 per cent., respectively, as compared with 1947, the number of employees increased by slightly more than 20 per cent., and in 1954 constituted nearly 80 per cent. of the total work force, as compared with 77 per cent. in 1947. Employers and self-employed combined constituted 17.8 per cent. of the work force in 1954 as compared with 19.0 per cent. in 1947.

POPULATION: OCCUPATIONAL STATUS, AUSTRALIA, 1947 AND 1954.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

(a) Includes persons who were (1) unable to secure employment; (2) temporarily laid off from their jobs; or (3) not actively seeking work at the time of the Census on account of sickness or accident, industrial dispute, resting between jobs or for any other reason.

NOTE.—Minus sign (—) denotes decrease.

10. **Race.**—The term “Race” as used for Census purposes is not synonymous with ethnic group, but is based on geographical rather than ethnological descriptions. The form of inquiry at the 1954 Census was:—“For persons of European Race, wherever born, write ‘European’. For non-Europeans, state the race to which they belong, for example, ‘Aboriginal’, ‘Chinese’, ‘Negro’, ‘Afghan’, etc. If the person is half-caste with one parent of European race, write also ‘H.C.’, for example ‘H.C. Aboriginal’, ‘H.C. Chinese’, etc.” The complementary instruction was:—“In the case of a person both of whose parents are non-European but of different races, state the race of that person’s father (and do *not* add ‘H.C.’).” This form of inquiry and the instruction are identical with those used at the 1947 Census. It follows that, as the essential distinction is between European and non-European races only, those having European blood to the extent of one half have been classed as half-castes of the non-European race.

A summary for the 1947 and 1954 Censuses is shown in the following table.

POPULATION: RACE, AUSTRALIA, 1947 AND 1954.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

Race.	Census, 30th June, 1947.			Census, 30th June, 1954.			Increase. 1947-54.

(a) Native of India or Pakistan,
and South Sea Islander, so described.

(b) Includes Fijian, Maori, Papuan, Pacific Islander, Polynesian

NOTE.—Minus sign (—) denotes decrease.

11. **Other General Characteristics.**—Questions asked at the 1933 Census regarding orphanhood, and the ability to read and write a foreign language (of persons who could not read and write English), were not asked on the schedules of the 1947 and 1954 Censuses and the question on dependent children asked at the 1947 Census was not asked in 1954. The latest data published in respect of the first two questions appear on pages 482 and 487 of Official Year Book No. 36, and in respect of dependent children on page 326 of Official Year Book No. 41.

§ 8. Oversea Migration.

1. Oversea Migration during the Present Century.—Earlier issues of the Official Year Book contain, in summary form, tables showing the increase of population by net migration from 1861 to the latest date, while information for individual years is published in the annual bulletin, *Demography*. The following table shows, for Australia, arrivals and departures and net migration since 1901. A graph showing arrivals and departures from 1921 to 1959 appears on page 300.

OVERSEA MIGRATION: AUSTRALIA.

Period.	Arrivals.			Departures.			Net Migration.		
	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.

(a) Excludes movement of defence personnel from September, 1939 to June, 1947.

NOTE.—Minus sign (—) indicates excess of departures over arrivals.

As the encouragement of immigration by governmental assistance has been a feature of Australian immigration policy, a clear indication of the significance of migration movements is obtained when "assisted" and "unassisted" movements are distinguished. This was shown broadly, for the period 1901-1952, in Official Year Book No. 40, page 361, and has been continued in the following table for the period 1926 to 1959.

"ASSISTED" AND "UNASSISTED" MIGRATION: AUSTRALIA.

Period.	Arrivals.			Departures.	Excess of "Un-assisted" Arrivals over All Departures.
	Nominated and Selected ("Assisted").	Other ("Un-assisted").	Total.		
1926-30 ..	99,403	371,077	470,480	340,773	30,304
1931-35 ..	781	238,542	239,323	250,209	- 11,667
1936-40(a) ..	3,828	317,484	321,312	278,184	39,300
1941-45(a)	63,925	63,925	56,116	7,809
1946-50(a) ..	273,195	428,725	701,920	348,836	79,889
1951-55 ..	275,241	752,625	1,027,866	614,042	138,583
1955 ..	66,688	170,549	237,237	139,982	30,567
1956 ..	54,957	192,491	247,448	153,450	39,041
1957 ..	62,361	170,967	233,328	154,596	16,371
1958 ..	55,799	174,465	230,264	164,898	9,567
1959 ..	(b) 64,137	189,759	253,896	177,105	12,654

(a) Excludes movements of defence personnel from September, 1939, to June, 1947.

(b) Preliminary.

NOTE.—Minus sign (—) indicates excess of departures over "unassisted" arrivals.

It is not possible in the statistics of departures to distinguish the return movement of persons who came to Australia as "assisted" migrants from that of "unassisted" migrants. Consequently, the separate net migration of "assisted" and "non-assisted" persons cannot be ascertained. Nevertheless, the basis on which the above table has been compiled is sufficient to throw into relief the major trends in Australian migration statistics in the period reviewed.

Although separate net migration figures are not available, it is generally agreed that Australia has gained considerably more population through its encouraged migration programme than it has from non-assisted migration.

A detailed review of assisted migration into Australia in recent years is given in § 9.

2. **Classification of Arrivals and Departures.**—(i) *General.* Since 1st July, 1924, overseas travellers have been classified according to declared intention in regard to residence made at the time of arrival or departure. Certain of the headings previously used in this classification were changed, as from 1957, to ensure more accurate definition and to assist in interpretation of the figures. The figures themselves, however, are exactly comparable with those published in issues of the Official Year Book prior to No. 44.

"Long Term and Permanent Movement" (formerly described as "Permanent Movement") relates to *persons arriving* who state that they intend to reside in Australia for a period of one year or more; and to *persons departing* who state that they intend to reside abroad for a period of one year or more.

"Short Term Movement" (formerly described as "Temporary Movement") relates to *persons arriving* who state that they intend to reside in Australia for a period of less than one year; and to *persons departing* who state that they intend to reside abroad for a period of less than one year.

These definitions are in accordance with international usage and do not purport to represent permanent migration as such. For various reasons, the intentions of travellers are subject to subsequent modification and the classification headings used must therefore be accepted as indicating intention only. The numbers so classified since 1st January, 1926, are as follows:—

ARRIVALS AND DEPARTURES CLASSIFIED ACCORDING TO INTENDED RESIDENCE: AUSTRALIA.

Period.	Arrivals.				Departures.			
	Long Term and Permanent Movement.(a)	Short Term Movement.(a)		Total.	Long Term and Permanent Movement.(a)	Short Term Movement.(a)		Total.
		Australian Residents Returning.	Visitors Arriving.			Australian Residents Departing.	Visitors Departing.	
1926-30 ..	224,010	121,395	125,029	b 470,480	103,209	111,714	125,772	c 340,773
1931-35 ..	54,444	84,554	100,325	239,323	71,670	79,426	99,108	d 250,209
1936-40 ..	(e) 88,712	104,870	127,730	321,312	51,006	94,650	132,528	278,184
1941-45 ..	(e) 32,624	11,150	20,151	63,925	22,399	9,163	24,554	56,116

1959 ..	124,022	61,754	68,120	253,896	40,444	64,631	72,030	177,105

(a) For definitions of long term and permanent and short term movement see letterpress above.
 (b) Includes 46 arrivals whose intended period of residence was not stated. (c) Includes 78 departures whose intended length of stay abroad was not stated. (d) Includes 5 departures whose intended length of stay abroad was not stated. (e) Includes evacuees arriving in Australia during the war years as follows:—1936-40, 4,543; 1941-45, 12,586.

(ii) *Long Term and Permanent Movement.* The 1939-45 War caused a large drop, from 1940, in the number of arrivals but after the war the number rose progressively, reaching 174,540 in 1950, the highest on record. As in the case of arrivals, although not to the same extent, the number of departures rose rapidly in the period of immediate post-war re-adjustment of population, but the high figure of 29,806 in 1946 was surpassed in each of the years 1952 to 1959, which were higher than any recorded since the introduction of the method of classification in 1924.

Up to and including 1929, there was a considerable net gain from long term and permanent movement, but during 1930 and 1931 there was a heavy net loss. The loss was very much reduced in 1932, 1933 and 1934, while during the five years up to and including

1939 there was a net gain of more than 28,000. Except for the arrival of evacuees, little movement took place during the war period, but in 1946 a net loss of 11,589 persons occurred, owing in large measure to the departure for the United States of America of Australian wives and children of American servicemen, and, when conditions permitted after the war, the departure of Australians to Papua and New Guinea and of large numbers of war evacuees who were returned to their home countries. Subsequently, the largest net gain recorded was 153,685 in 1950. A net gain of 83,578 was recorded in 1959.

(iii) *Short Term Movement.* Short term movement refers to persons intending residence for periods of less than one year and includes Australian residents and visitors from overseas. Since 1st July, 1947, it also includes Australian defence personnel irrespective of intended length of residence. Although considerable in number, the short term movement is of little significance from the point of view of population growth, as it represents principally the movement of people travelling on business or for pleasure.

3. *Extent of Journey.*—Since 1st January, 1945, the journeys undertaken by passengers have been recorded for Australian oversea migration statistics in two ways: (a) according to country of embarkation or disembarkation and (b) according to country of last or intended future residence.

Detailed statistics of oversea journeys are published in the annual bulletin, *Demography*.

4. *Nationality.*—From 1st July, 1924, to 30th June, 1948, nationality of oversea passengers was recorded as "British" or "Alien" only. Racial origin was also recorded and as the particulars of racial origin stated by passengers closely reflected their nationalities and made it possible to present much more detail of "nationality" than was possible on the total "Alien" basis, published statistics were confined mainly to those compiled on the detailed basis according to a composite classification of "nationality or race".

This method was superseded on 1st July, 1948, by one in which each passenger's race was recorded as European, Asian, African or Polynesian and nationality, as shown on each passenger's passport or other document of identification, was recorded independently of race. The principal nationalities recorded on this basis for the years 1957 to 1959 are as follows:—

NATIONALITY OF ARRIVALS AND DEPARTURES: AUSTRALIA.

Nationality.	Arrivals.			Departures.			Net Migration.		
	1957.	1958.	1959.	1957.	1958.	1959.	1957.	1958.	1959.

Total ..	65,637	58,385	124,022	20,757	19,687	40,444

(a) For definition of long term and permanent movement see para. 2 (i), p. 316.

6. **Occupation.**—The following is a summary of the main occupational groups of males classified to long-term and permanent movement (see para. 2 (i) on p. 316) during 1959:—Arrivals—Rural, fishing and hunting, 3,401; professional and semi-professional, 3,133; administrative, 1,238; commercial and clerical, 5,250; domestic and protective service, 1,555; craftsmen, 14,850; operatives, 6,914; labourers, 6,339; indefinite or not stated, 2,622; not gainfully occupied (mainly children), 20,335; total, 65,637. Departures—Rural, fishing and hunting, 615; professional and semi-professional, 2,028; administrative, 708; commercial and clerical, 2,626; domestic and protective service, 956; craftsmen, 3,913; operatives, 1,366; labourers, 2,357; indefinite or not stated, 390; not gainfully occupied (mainly children), 5,798; total, 20,757.

§ 9. Assisted Migration into Australia.

1. **Joint Commonwealth and States Scheme.**—Details of the joint scheme of assisted immigration arrived at by agreement between the Commonwealth and State Governments, which operated from 1920 to 1939, were published in earlier issues of the Official Year Book (see No. 38, p. 576). After the outbreak of hostilities in 1939, it was decided to discontinue the grant of assisted passages for the duration of the war.

2. **United Kingdom Free and Assisted Passage Agreements, March, 1946.**—(i) *General.* Resumption of migration was the subject of negotiations between the Commonwealth and United Kingdom Governments towards the end of 1945 and two agreements were signed in March, 1946. These agreements, which came into operation on 31st March, 1947, provided

for free and assisted passages to be granted to British residents desirous of settling in Australia. The Free Passage Agreement was terminated on 28th February, 1955. From 1st April, 1949, the Assisted Passage Agreement continued in operation under renewal from time to time and has again been renewed as from 1st April, 1957.

(ii) *Assisted Passages.* Under the existing financial arrangements, the United Kingdom Government's contribution towards the Assisted Passage Scheme is agreed upon when the Agreement is extended, and for the five years from 1st April, 1957, is fixed at a maximum amount of £150,000 sterling a year.

The Assisted Passage Agreement covers five main groups of migrants (and their families), namely, personal nominees, group nominees, Commonwealth nominees. "Bring out a Briton" campaign families and unnominated migrants. *Personal nominees* are migrants sponsored by residents of Australia able to provide suitable accommodation for them (any adult resident of Australia may nominate friends or relatives in the United Kingdom who are eligible to be considered for assisted passages under this agreement). *Group nominees* are recruited on a trade-qualification basis to meet applications lodged by employers and State Governments, who guarantee to provide employment and accommodation for those selected; *Commonwealth nominees* comprise workers selected against known and assessed employment demands in Australia. Migrants in this group can live in hostels established by the Commonwealth Government for up to two years while they are seeking to obtain private accommodation. The Commonwealth nominee scheme was introduced in 1950 in order to reinforce the personal and group nomination schemes. "Bring out a Briton" campaign families are selected to fill employment and accommodation vacancies located by special voluntary committees formed by community effort to stimulate the flow of British migrants who are otherwise unable to obtain sponsorship. *Unnominated migrants* may also be granted assisted passages, even though they are unable to arrange personal nominations and are not occupationally qualified for approval under other existing assisted passage selection schemes. Families must possess a minimum of £500 sterling for transfer to Australia and must be prepared to make their own accommodation arrangements after arrival; these are known as "Nest-Egg" migrants. Single persons must possess £25 sterling and married couples without children £50 sterling. Temporary accommodation if required is provided by the Commonwealth Government.

Although the Commonwealth is not generally prepared to accept single persons or married persons without children if they have reached their forty-sixth birthday before the date of sailing, the parents or close relatives of intending migrants or of persons established in Australia may, if otherwise acceptable under the scheme, be granted passages irrespective of age. Each migrant of 19 years of age and over is required to contribute £10 sterling towards the cost of his or her passage, while persons under 19 years travel free. Apart from this contribution and that made annually by the United Kingdom Government, the cost of the passages is borne by the Commonwealth Government.

(iii) *Number of Arrivals.* The numbers of British migrants who came to Australia under the Free and Assisted Passage Agreement during the years 1947 to 1959 are given in the following table:—

UNITED KINGDOM FREE AND ASSISTED PASSAGE AGREEMENT: NUMBER OF MIGRANTS.(a)

Period.	N.S.W.	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	A.C.T.	Commonwealth Nominees.	Total.
1947-52 ..	41,756	48,985	21,176	12,407	16,601	6,242	2,358	27,367	176,892
1953 ..	3,890	3,962	1,835	1,072	1,969	485	110	372	13,695
1954 ..	3,046	3,199	1,872	1,406	2,067	425	97	6,605	18,717
1955 ..	4,743	6,068	2,731	1,756	2,219	672	119	7,389	25,697
1956 ..	4,231	5,516	2,471	1,814	2,231	602	189	7,082	24,136
1957 ..	4,994	5,184	3,219	2,197	1,774	749	220	6,665	25,002
1958 ..	5,921	6,392	3,568	3,239	2,400	930	199	9,338	31,987
1959(b) ..	4,377	5,130	2,460	3,500	1,674	732	223	13,518	31,614
Total, 1947-59	72,958	84,436	39,332	27,391	30,935	10,837	3,515	78,336	347,740

(a) Includes child migrants as shown in para. 3 (iii) below. (b) Preliminary. (c) Includes 3,444 persons, comprised of unnominated single persons and married couples without children.

3. *Child Migration from the United Kingdom.*—(i) *General.* Since the commencement of the assisted passage schemes in 1947, the immigration of unaccompanied children and youths from the United Kingdom has been encouraged under the auspices of approved voluntary organizations. The organizations at present introducing child migrants include the Fairbridge Farm Schools, Dr. Barnardo's Homes, the Big Brother Movements of New South Wales and Tasmania, and the Northcote Children's Emigration Fund. All the principal religious denominations are also participating in the scheme. There are 34 approved Homes in Australia caring for 806 child migrants.

(ii) *Financial Assistance.* The United Kingdom Government contributes 12s. 6d. a week for each child and in addition the respective State Governments contribute amounts varying from 7s. a week in New South Wales to £1 3s. 3d. in Western Australia. The Commonwealth Government pays the normal child endowment of 10s. a week. In addition, the Commonwealth Government and the State Government concerned may contribute towards the capital expenditure on accommodation for child migrants.

(iii) *Number of Arrivals.* From the beginning of 1947 to the end of 1959, a total of 5,435 British children and youths arrived under the sponsorship of voluntary organizations. New South Wales took 3,264, Western Australia 1,264, Victoria 494 and the other three States 413. These children were brought to Australia under the United Kingdom Free and Assisted Passage Scheme and are included in the figures shown in the table on page 319.

4. *Assisted Passage Scheme, Eire.*—In November, 1948, the Commonwealth Government decided to grant limited financial assistance to natural-born citizens of Eire normally resident in the British Isles, and to natural-born British citizens resident in Eire, who wished to emigrate to Australia and who were duly selected. This scheme applied only to prospective settlers and their dependants who were not eligible for assisted passages under the agreement with the United Kingdom Government (*see para. 2 above*). The maximum amount granted towards an adult passage was £30 sterling, with varying amounts for children according to age.

It was not essential for an applicant for a passage to be nominated by a friend or relative in Australia before the question of granting financial assistance was considered. Single men and women who were eligible under the scheme were readily accepted. Families, on the other hand, were accepted only if they could produce evidence of having secured accommodation in Australia, or, in the case of nominated migrants, a guarantee of accommodation by their sponsors. Up to the end of 1959, 3,360 migrants had arrived under this scheme.

The assisted passage scheme for citizens of Eire was cancelled on 31st March, 1959, and as from 1st April, 1959, the General Assisted Passage Scheme (*see para. 15 below*) has been applied to nationals of Eire.

5. *Maltese Migration.*—On 31st May, 1948, the Commonwealth Government and the Government of Malta entered into an agreement under which both Governments grant financial assistance towards the passage costs of selected Maltese migrants. The Commonwealth contribution is £30 sterling per adult, with proportionate amounts for children, and the Government of Malta contributes an amount at least equal to this sum. This agreement has been extended from time to time. On 13th August, 1957, a new agreement, which was acknowledged to have come into effect as from 1st July, 1956, was signed between the two Governments. This agreement, which was to be of 2 years' duration, was extended to 30th June, 1959, and subsequently to 30th June, 1960.

From its inception until 31st December, 1959, a total of 24,841 Maltese had arrived under this scheme. Up to the end of 1959, 234 Maltese children had been brought out to approved institutions in Australia. These are included in the number shown above.

6. *Empire and Allied Ex-Servicemen's Scheme.*—On 26th May, 1947, the Commonwealth Government implemented a scheme under which assistance was given to the passage costs of Empire ex-servicemen and their dependants not covered by the Free and Assisted Passage Scheme (*see para. 2 above*) and of ex-servicemen of the U.S.A. Later, eligibility was extended to ex-servicemen and resistance workers of the Netherlands, Norway, France, Belgium and Denmark. The amount of assistance for an adult was £30 sterling and amounts for children varied according to age. The scheme was discontinued as from 30th June, 1955.

During its currency a total of 21,333 migrants came to Australia under the scheme. The majority of these (16,830) were Dutch.

7. Displaced Persons Scheme.—On 21st July, 1947, the Commonwealth Government entered into an agreement with the International Refugee Organization to settle displaced persons in Australia. Although the International Refugee Organization concluded its activities in 1951, the Commonwealth agreed to receive those displaced persons already accepted for migration, but whose passages had still to be arranged. A total of 170,700 persons settled in Australia under this scheme. Since the cessation of the Displaced Persons Scheme, substantial numbers of refugees have migrated to Australia under both assisted and full-fare arrangements (*see para. 14*).

8. Netherlands Migration.—A migration agreement concluded between the Commonwealth and Netherlands Governments in February, 1951, came into operation on 1st April of that year. On 1st August, 1956, the agreement was extended for a period of 5 years with retroactive effect as from 1st April, 1956. This superseded an earlier arrangement in 1946, between the Commonwealth and the Netherlands Emigration Foundation (*see Official Year Book No. 39, p. 567*).

The migrant is required to contribute towards his passage costs in accordance with a formula devised by the Netherlands Government. The balance is met by the Commonwealth and Netherlands Governments and the Intergovernmental Committee for European Migration. The Commonwealth Government's contribution is now equivalent to \$110 a head.

The provision of shipping is the responsibility of the Netherlands Government. The Commonwealth arranges for the reception of migrants and their after-care and assists in the securing of employment. Families who have not obtained private accommodation prior to arrival may be temporarily accommodated in an Immigration Centre. When the breadwinner is placed in employment, he proceeds either to employer-found accommodation or a Commonwealth Hostel. These arrangements continue until the family can secure its own accommodation, or vacancies enable a family to be united in a hostel.

Up to the end of December, 1959, 51,449 Dutch migrants had settled here under the Netherlands–Australia Migration Agreement.

9. Italian Migration.—On 29th March, 1951, the Commonwealth and Italian Governments entered into a migration agreement effective for a period of 5 years, under which certain selected Italian migrants were assisted to Australia. The agreement came into force on 1st August, 1951.

The agreement was temporarily suspended at the end of 1952, but in March, 1954 provision was made for assisted passages to be granted to certain relatives and fiancées of migrants who had previously settled in Australia under the agreement. On 1st December, 1954, the agreement proper was re-opened and was extended to 31st July, 1959. It has since been further extended, by an exchange of letters, to 31st July, 1960. At present, the Commonwealth contributes the equivalent of \$100 towards the fare of each migrant. The balance of passage costs is contributed by the migrants themselves, the Italian Government and the Intergovernmental Committee for European Migration. Up to 31st December, 1959, arrivals under this agreement totalled 38,947 persons.

As the Italian agreement does not provide for the acceptance of nationals other than Italian, a special quota is determined annually for the selection of suitable refugees from other nationals living in Italy. Arrivals under this "Non-Italian National Quota" (N.I.N.Q.) totalled 4,830 between 1st July, 1955, and 31st December, 1959.

10. Migration from Trieste.—In 1953, arrangements were made for the migration of refugees from Trieste. These arrangements continued until what was formerly the Free Territory of Trieste became part of the Italian Republic. Since then, migrants from Trieste have proceeded under the Italian Agreement. Altogether, 4,745 Triestians arrived in Australia as assisted migrants up to 30th June, 1955. The Commonwealth made a contribution

to passage costs at the same rate as for other European migrants and the balance was made up by contributions from the Intergovernmental Committee for European Migration and the Italian Government.

11. German Migration.—On 29th August, 1952, a migration agreement was signed between the Commonwealth Government and the Government of the Federal Republic of Germany. This was somewhat similar to the agreements concluded with the Netherlands and Italy and was effective for a period of 5 years. The agreement was renewed on 27th August, 1958, to be effective from 29th August, 1957. The Commonwealth Government's contribution towards passage costs is the equivalent of \$100 a head. The migrant may be required to pay a small contribution and the balance of passage costs is paid by the Intergovernmental Committee for European Migration. The ICEM payment is derived in part from a lump sum contribution which the Government of the Federal Republic of Germany makes annually to the Committee. Arrivals of German assisted migrants numbered 50,122 to the end of December, 1959.

12. Austrian Migration.—Late in 1952, arrangements were made with the Intergovernmental Committee for European Migration for the migration to Australia of a small number of selected rural and other workers and their families from Austria. Later, these arrangements were extended to cover greater numbers and wider categories of migrants. The Commonwealth contributes an amount equivalent to \$100 a head towards the passage costs of Austrian migrants. The Austrian Government, the Intergovernmental Committee for European Migration and the migrants themselves also contribute towards passage costs. Reception arrangements, temporary accommodation, after-care and placement in employment are undertaken by the Commonwealth. Under these arrangements, 14,059 Austrians arrived in Australia up to 31st December, 1959.

13. Greek Migration.—An arrangement similar to the Austrian one was made with the Intergovernmental Committee for European Migration late in 1952. The Commonwealth's contribution and the arrangements for reception, accommodation, employment and after-care are the same as for Austrian migrants. Under this arrangement, 25,061 Greek assisted migrants had settled in Australia up to 31st December, 1959.

14. Refugee Migration.—Following the cessation of the Displaced Persons Scheme in 1951, Australia has accepted for permanent resettlement under assisted passage arrangements 24,200 refugees of European origin to 31st December, 1959. Included in this figure are 13,933 Hungarians who have been granted asylum in Australia since the uprising in October, 1956. The Commonwealth Government granted a total of £A130,000 for the relief of Hungarian refugees and, in addition, contributed the equivalent of \$100 a head to the passage costs of those refugees who were granted assisted passages. In the post-war period up to 31st December, 1959, Australia has received 246,380 refugees under assisted passage and full fare arrangements.

Australia continues to accept refugees—mainly Yugoslavs and Hungarians—from countries of temporary asylum under the assisted passage schemes applicable to those countries, as well as under full fare arrangements.

15. General Assisted Passage Scheme.—To encourage the migration of persons from the United States of America, Switzerland, Denmark, Norway, Sweden and Finland, the Commonwealth Government on 10th September, 1954, introduced an assisted passage scheme for nationals of these countries. Later, the scheme was extended to cover certain British subjects living in a number of countries other than the United Kingdom and to nationals of Eire, Belgium and France. Up to 31st December, 1958, the Commonwealth made a contribution of £37 10s. sterling per adult and *pro rata* amounts for children according to the fare paid, but this was increased to £57 2s. 10d. sterling (\$160) per adult and *pro rata* for children in respect of migrants approved on and after 1st January, 1959. To the end of December, 1959, 11,432 migrants had arrived in Australia under this scheme.

16. Summary of Arrivals of Assisted Migrants.—The following table shows, for the period January, 1947, to December, 1959, the number of assisted migrants who arrived in Australia under the various schemes.

NUMBER OF ARRIVALS UNDER ASSISTED PASSAGE SCHEMES.

(a) General Assisted Passage Scheme, mainly Swiss, Danish, Swedish, Norwegian, Finnish, French and U.S. Americans. (b) Hungarians from all countries of refuge, Austria, Italy, Switzerland, &c. (c) Mostly Yugoslavs and Stateless. (d) Mostly Dutch. (e) Preliminary.

NOTE.—(i) All arrivals indicated in this table have obtained some financial assistance from the Australian Government towards payment of their passage money. Transport to Australia for the migrants concerned has been arranged on (1) ships under charter to the Department of Immigration, (2) ships and aircraft under charter to the Intergovernmental Committee for European Migration and (3) normal commercial shipping and airlines.

(ii) The arrivals under these schemes include a small number of nationals of other countries and stateless persons.

From the earliest years of assisted migration to the end of 1959, a total of 1,854,001 assisted migrants arrived in Australia.

§ 10. The Regulation of Immigration into Australia.

1. **Powers and Legislation of the Commonwealth.**—(i) *Constitutional.* Under section 51 (xxvii.) and (xxviii.) of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws with respect to immigration, emigration, aliens, and the influx of criminals.

(ii) *Legislation.* Immigration into the Commonwealth is regulated by the Migration Act 1958 which came into force on 1st June, 1959, and repealed the Immigration Act 1901–1949 and Aliens Deportation Act 1948.

Any immigrant entering Australia after the commencement of the Act without having been granted an “entry permit” and without being within an exempted class, is a prohibited immigrant. Exempted persons include diplomatic, consular and trade representatives of other countries and seamen whose ships are in Australian ports. “Immigrant” includes persons entering for temporary stay.

Entry permits are normally granted at ports of entry by means of stamps in travellers’ passports or equivalent documents, without any form of application having to be completed. Temporary entry permits are granted to persons who have been authorized to enter for a limited period only. Persons eligible to enter for permanent residence are granted permits of unrestricted validity. Persons who are refused entry permits must be kept on board the ship on which they arrive; otherwise, the shipping company is liable to a fine of £500.

The Act abolishes the “Dictation Test” as a means of excluding or deporting ineligible persons. Other deportation powers which were contained in the repealed legislation were largely re-enacted, though with some revision.

The Act also revises the law relating to the emigration of aborigines and children, repealing the Emigration Act 1910.

The new Act does *not* affect passport or visa requirements for entry to Australia. All persons who, prior to the 1958 Act, had been required before embarkation to obtain visas, or other kinds of provisional authority to proceed to Australia, still have to obtain them. Likewise, persons who have *not* had to produce prior authority to enter Australia, before being given passages to Australia, do *not* have to obtain them solely as a result of the new Act. Persons previously allowed to enter Australia without production of passports—notably British people arriving from New Zealand—are still able to do so.

The Immigration (Guardianship of Children) Act 1946–1952 provides that the Minister for Immigration becomes the legal guardian of every person under the age of 21 years who enters Australia other than in the charge of, or for the purpose of living in the care of, a parent or adult relative. It is primarily administered through the child welfare authorities in each State who, as the Minister’s delegates under the Act, supervise the welfare of each “immigrant child”.

The Aliens Act 1947–1952 provides that a register of aliens shall be maintained for every State and Territory of the Commonwealth. Unless exempted, aliens 16 years of age and over are required to register with the Department of Immigration and to notify the Department of any change of address, occupation or employment, and of their marriage. The Act also provides that consent must be obtained before an alien may change his surname.

2. **Conditions of Immigration into Australia.**—(i) *Persons of Non-European Race.* In pursuance of established policy, the general practice is not to permit persons of non-European descent to enter Australia for the purpose of settling permanently, but exceptions are made in favour of the spouses and children of Australian citizens and other British subjects resident in Australia, and also for highly qualified and distinguished persons. Special provision exists for the temporary admission of non-Europeans who are bona fide merchants, students, tourists and numerous other categories. They are permitted to enter and remain in Australia under temporary entry permits while they retain their status.

(ii) *Persons of European Race.* Maltese, Cypriots and aliens of European race desiring to settle permanently in Australia are required to obtain authority for admission from the Department of Immigration or an Australian Oversea Post. Their admission under the present policy is subject to their compliance with the Commonwealth's requirements in regard to health, character, freedom from security risk and general suitability as settlers.

(iii) *General Information.* General information as to conditions of entry into Australia may be obtained from the following officers:—

- (a) In Australia—The Secretary, Department of Immigration, Canberra, Australian Capital Territory, and Commonwealth Migration Officers in the capital cities of the various States;
- (b) In Great Britain—the Chief Migration Officer, High Commissioner's Office, Australia House, Strand, London;
- (c) In other British Commonwealth countries—The High Commissioner for Australia;
- (d) In Holland, Italy, Germany, Greece, Austria, Denmark and Hong Kong—the Chief Migration Officer or Migration Officer in the capital city of each of those countries;
- (e) In other countries where Australia is represented—the Secretary, Australian Embassy, Legation or Consulate.

For details of Australian representatives in the British Commonwealth and other countries see the section entitled "Australian Representation Abroad: Oversea Representation in Australia" in Chapter XXX.

3. *Nationality of Persons Arriving.*—For details of the nationality of persons who arrived in Australia during the years 1957 to 1959, see page 317.

§ 11. Passports.

Under the Passports Act 1920, it was compulsory for each person over 16 years of age leaving Australia to be in possession of a passport or other document authorizing his departure. This Act has now been superseded by the Passports Act 1938–1948, which repealed the compulsory provisions. The Act also applies to the External Territories of Australia.

Although it is not compulsory for Australians to obtain a passport when leaving Australia, it is desirable in their own interests that they should have one in order to establish their identity and nationality overseas. A passport is necessary for admission into most countries, and the holder of an Australian passport also has no difficulty in landing on return to Australia. The charge for an Australian passport is £1.

As a result of the Nationality and Citizenship Act 1948–1958 (see § 12 below) and the enactment of similar citizenship legislation in other British Commonwealth countries, it is now the general rule that Australian passports are issued only to Australian citizens. Citizens of other British Commonwealth countries secure passports from their own High Commissioners in Australia. Australian citizens abroad may secure passports only from Australian representatives.

Diplomatic and official passports are issued to members of the Australian diplomatic service and other Government officials proceeding abroad on official business.

Applicants for passports are required to produce evidence of their identity and nationality (e.g., birth certificates).

§ 12. Citizenship and Naturalization.

1. **Commonwealth Legislation.**—The Nationality and Citizenship Act 1948 commenced on Australia Day (26th January), 1949 and repealed all previous Commonwealth legislation on this subject. The most significant effect of the Act was the creation for the first time of the status of "Australian Citizen". In this respect, the Act was complementary to citizenship legislation passed or about to be passed by other countries of the British Commonwealth. All Australian citizens, and the citizens of other countries of the British Commonwealth, are declared to be British subjects. For details of the Act, see Official Year Book No. 42, page 619.

2. **Certificates Granted.**—(i) *Australia.* The following tables show the number of certificates granted during 1958 and the number of persons affected by these certificates. The certificate covers the person being naturalized and his/her children under the Nationality and Citizenship Act 1948–1958.

NATURALIZATION: CERTIFICATES GRANTED, AUSTRALIA, 1958.

(a) Excludes children affected by grant of certificates.

(ii) *States.* The number of persons affected by certificates granted in 1958 in respect of residents of the various States and Territories were as follows:—New South Wales, 16,524; Victoria, 12,402; Queensland, 4,932; South Australia, 7,097; Western Australia, 4,063; Tasmania, 1,154; Northern Territory, 123; Australian Capital Territory, 365; External Territories, 272; Total, 46,932.

§ 13. Population of External Territories.

Ordinances of the individual external territories under the control of Australia, namely; Norfolk Island, Papua, the Trust Territory of New Guinea, and the Trust Territory of Nauru, provide for a Census of the non-indigenous population to be taken by the Commonwealth Statistician on the day prescribed for the taking of a Census in the Commonwealth of Australia. The following table shows the population of each of these Territories at the Census of 30th June, 1954, and the estimated population at 30th June, 1959.

The Commonwealth of Australia assumed control of the Cocos (Keeling) Islands on 23rd November, 1958, and of Christmas Island on 1st October, 1958. An estimate of these populations at 30th June, 1959 is included in the table below.

POPULATION: EXTERNAL TERRITORIES.

(EXCLUDING INDIGENOUS POPULATION.)

Territory.	Census, 30th June, 1954.			Estimate, 30th June, 1959.
	Males.	Females.	Persons.	Persons.
Christmas Island	2,908
Cocos (Keeling) Islands	651
Norfolk Island	478	464	942	1,048
Papua	3,867	2,446	6,313	8,798
Trust Territory of New Guinea	7,201	4,241	11,442	15,270
Trust Territory of Nauru	1,269	376	1,645	2,068

Particulars concerning the indigenous populations of the external territories will be found in Chapter V.—The Territories of Australia.

§ 14. The Aboriginal Population of Australia.

In Official Year Book No. 17, pages 951–61, a brief account was given of the Australian aboriginal population, its origin, its numbers as estimated from time to time, and the steps taken for its protection. On pages 914–6 of Official Year Book No. 22, particulars were shown for each of the States and Territories of Australia at successive periods, while a special article dealing with the estimated number and distribution of the native population at the date of first settlement of the white race in the continent appeared on pages 687–96 of Official Year Book No. 23.

The aborigines are scattered over the whole of the mainland but are mostly in Western Australia, Queensland and the Northern Territory. Particulars of the number in each State and Territory at the Census of 30th June, 1954, are shown in the following table. Full-blood aborigines in employment or living in proximity to settlements were enumerated at the census, while estimates of the total numbers, including those living in the nomadic state, were furnished by the authorities responsible for native welfare. Half-caste aborigines are included in the numbers of the population and are of course enumerated at the census. The figures shown for Queensland are exclusive of Torres Strait Islanders.

ABORIGINAL POPULATION, 30th JUNE, 1954.

(a) Enumerated at the Census of 30th June, 1954.

(b) Furnished by the native welfare authorities (see text hereunder).

(c) Approximate, see text hereunder.

(d) Revised estimates.

According to the latest information available from native welfare authorities, there appears to have been little real change since 1947 in the total numbers of aborigines in Australia. They appear to have decreased in some States and to have increased in others and especially in the Northern Territory. But exact numbers are not yet known and estimates have recently been revised. Even by Census and special surveys it is difficult to obtain accurate counts of those aborigines who live on the fringe of settlements. Nomadic habits still persist to some extent among "settled" natives and it is still very difficult to obtain reliable estimates of the numbers of aborigines who inhabit extensive districts remote from settlement. These are in an area exceeding one million square miles of hinterland embracing outlying parts of three States and of the Northern Territory.

Under these circumstances, the general Census of Population is not a suitable means of obtaining records of the total number of aborigines in Australia. The only available source of estimates is the administrative records of various welfare authorities supplemented by observations of field officers and others who traverse the remote hinterland.

The estimate of number of full blood aborigines in South Australia shown in the above table is a rough approximation derived from the Annual Report of the Aborigines' Protection Board of that State. The estimate of 10,195 for Western Australia as at 30th June, 1954, comprises 8,195 recorded by the Commissioner of Native Welfare for the settled districts, and his revised estimate of 2,000 "nomad natives beyond the confines of civilization". This latter figure was referred to as follows in the Annual Report of the Commissioner of Native Affairs for 1958-59:—"It would be impossible, of course, to estimate the number of desert natives who are now living beyond the confines of civilization, but it is certain that there cannot be more than approximately 2,000". Previous estimates were reduced from 10,000 to 6,000 in 1948 and to 2,000 in 1959 as the result of fuller information and the Commissioner's Report indicated that the earlier estimates had been greatly exaggerated.

As the result of welfare action taken by the Administration in the Northern Territory 15,439 aborigines were gazetted as wards under the Welfare Ordinance on 13th May, 1957. On the basis of this number with adjustments for nomadic and other aborigines, the Administration estimated that there were 15,995 aborigines of full blood in the Northern Territory on 31st December, 1956. For comparative purposes a figure of approximately 15,500 is adopted in the above table as at 30th June, 1954.

CHAPTER X.

VITAL STATISTICS.

NOTE.—The tables in this chapter are confined to the principal characteristics of vital statistics for Australia and relate, in the main, to the year 1958 except for the totals of marriages, births, deaths and infant deaths, for which it has been possible to include figures for 1959. Comparisons have been restricted, in general, to the individual years 1955 to 1959 and the five-year periods 1931–35 to 1951–55, while age data have been shown in five-year groups. Comparisons over longer periods, together with more detailed figures such as single age particulars and cross-classifications of various characteristics, will be found in the annual bulletin, *Demography*.

Figures of births and deaths for Australia throughout are exclusive of full-blood aboriginals.

§ 1. Provisions for Registration and Compilation of Statistics.

In Australia, vital statistics are compiled from information supplied for the registration of births, deaths and marriages. Each State and Territory has an independent system of registration. Provisions for the civil registration of births, deaths and marriages have been in force in Tasmania from 1839, in Western Australia from 1841, in South Australia from 1842, in Victoria from 1853 and in New South Wales and Queensland (then part of New South Wales) from 1856. Registration in the Territories is administered by the Commonwealth Government, registration in respect of the Northern Territory having been taken over from South Australia in 1911 and in respect of the Australian Capital Territory from New South Wales in 1930. The authority responsible for the registration of births, deaths and marriages occurring within his particular State or Territory is the Registrar-General (the Government Statist in Victoria) or the Principal Registrar.

In the Australian Capital Territory and the Northern Territory, information concerning a birth is required to be supplied within 21 days, in South Australia in 42 days, and in all other States 60 days is allowed. In all States, however, provision has been made for the late registration of births. For the registration of a death, the period allowed is 8 days in Tasmania, 10 days in South Australia, 14 days in Western Australia, the Northern Territory and the Australian Capital Territory, 21 days in Victoria and 30 days in New South Wales and Queensland. Provision is made in all States and Territories for the celebration of marriages by ministers of religion registered for that purpose with the Registrar-General (the Government Statist in Victoria) or the Principal Registrar of Births, Deaths and Marriages of the State or Territory and also by certain civil officers. In all cases the celebrant, whether minister of religion or civil officer, is required to register particulars of the parties married with the Registrar-General's Office. In Victoria, Western Australia, the Northern Territory and the Australian Capital Territory, registration of a marriage is required immediately following the ceremony, in Tasmania and South Australia within 7 days and in New South Wales and Queensland within 30 days.

For all States except Tasmania, the registration of stillbirths is compulsory. Western Australia was the first State to introduce compulsory registration in 1908, followed by the Australian Capital Territory in 1930, New South Wales in 1935, South Australia in 1937, Northern Territory in 1949, Victoria in 1953, and Queensland in 1959. There is no statutory requirement in Tasmania for the registration of stillbirths, but provision is made for voluntary registration and it appears likely that nearly all such births are notified to the Registrar-General. In this chapter, stillbirths have been excluded from all tables of births and deaths and are shown only in those specially relating to stillbirths.

The data for the compilation of vital statistics are obtained from registry records and forwarded, through the Deputy Commonwealth Statistician in each State, and direct from the Principal Registrars in the two Territories, to the Commonwealth Statistician. The compilation and publication of vital statistics for Australia is one of the functions of the Commonwealth Statistician. The Deputy Commonwealth Statisticians compile and publish statistics relating to their respective States.

§ 2. Marriages.

NOTE.—See NOTE at the beginning of this chapter.

1. **Number of Marriages.**—The number of marriages registered in Australia during the year ended 31st December, 1959, was 74,363, giving a rate of 7.39 per 1,000 of the mean population for the year. A summary of the number of marriages registered in each State and Territory in five-year periods from 1931–35 to 1951–55 and for each of the years 1955 to 1959, is given in the following table. Annual averages for each five-year period from 1861 to 1950 were published in Official Year Book No. 39, page 575. A graph showing the number of marriages in each year from 1860 to 1959 appears on page 335 of this issue.

MARRIAGES.

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

2. **Crude Marriage Rates.**—The crude marriage rates for each State and Territory from 1931–35 to 1959 are given hereunder:—

CRUDE MARRIAGE RATES.(a)

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES.									
1931–35 ..	7.20	7.02	7.35	6.83	7.58	7.19	5.92	5.74	7.16
1936–40 ..	9.29	9.52	8.80	9.65	9.49	9.25	13.28	7.22	9.35
1941–45 ..	9.97	9.86	10.04	10.61	9.74	8.61	7.18	7.57	9.94
1946–50 ..	9.90	9.72	9.41	9.87	10.01	9.56	9.39	9.36	9.77
1951–55 ..	8.41	8.34	7.92	8.11	8.44	8.35	9.21	(b)8.22	8.29
ANNUAL RATES.									
1955 ..	7.92	7.94	7.54	7.59	7.81	8.22	8.86	(b)7.74	7.84
1956 ..	7.68	7.73	7.27	7.40	7.50	8.07	8.94	(b)8.01	7.61
1957 ..	7.94	7.57	7.38	7.53	7.08	7.59	9.50	(b)6.80	7.64
1958 ..	7.73	7.54	7.25	7.25	7.14	7.33	10.45	7.88	7.51
1959 ..	7.50	7.27	7.36	7.18	7.49	7.45	10.01	7.55	7.39

(a) Number of marriages per 1,000 of mean population. (b) Revised rates based on population estimates adjusted in accordance with the June, 1957 Population Count of Canberra are as follows:—1951–55, 8.20; 1955, 7.67; 1956, 7.86; 1957, 6.74.

3. **Marriage Rates based on Marriageable Population.**—As the marriage rates in some international tabulations are based on the unmarried population aged 15 years and over,

the corresponding rates have been calculated for Australia for the eight census periods to 1953-55. The period in each case comprises the census year with the year immediately preceding and the year immediately following, and the figures are as follows:—

PERSONS MARRYING PER 1,000 OF UNMARRIED POPULATION: AUSTRALIA.

Period.				Rate.(a)	Period.				Rate.(a)
1880-82	48.63	1920-22	55.97
1890-92	44.04	1932-34	42.88
1900-02	42.14	1946-48	71.24
1910-12	50.12	1953-55	65.32

(a) Average annual number of persons who married per 1,000 unmarried persons, including widowed and divorced, aged 15 years and over.

4. **Crude Marriage Rates of Various Countries.**—The following table gives the crude marriage rates for Australia in comparison with the rates for various other countries.

CRUDE MARRIAGE RATES(a): VARIOUS COUNTRIES.

Country.					Country.				
	1921-25.	1926-30.	1931-35.	1958.		1921-25.	1926-30.	1931-35.	1958.

(a) Number of marriages per 1,000 of mean or mid-year population. (b) White population only. (c) 1957. (d) Includes Maoris.

5. **Age and Conjugal Condition at Marriage.**—(i) *General.* Particulars of age at marriage in age groups and previous conjugal condition of bridegrooms and brides in 1958 are given hereunder. There were 7,004 males under 21 years of age married during 1958, while the corresponding number of females was 27,340. At the other extreme there were 974 bridegrooms and 452 brides in the age group 65 years and over.

**AGE AND CONJUGAL CONDITION OF BRIDEGROOMS AND BRIDES:
AUSTRALIA, 1958.**

Age at Marriage (Years).	Bridegrooms.				Brides.

40–44 ..	2,135	1	18	119	299	482	517	406	293
45–49 ..	1,508	..	7	48	101	220	306	349	477
50–54 ..	1,072	..	3	11	24	71	154	230	579
55–59 ..	790	..	1	8	13	21	71	119	557
60–64 ..	609	1	14	33	39	522
65 and over ..	974	2	3	9	31	929
Total Brides	74,001	29	18,525	33,903	9,216	4,348	2,693	1,681	3,606

(iv) *Average Ages of Bridegrooms and Brides.* The average age at marriage of brides and bridegrooms has steadily declined during recent years. The average ages, in years, of brides for each of the five years to 1958 were:—1954, 25.59; 1955, 25.42; 1956, 25.34; 1957, 25.18; and 1958, 25.00. The average ages, in years, of bridegrooms were 28.82 in 1954, 28.68 in 1955, 28.66 in 1956, 28.54 in 1957, and 28.36 in 1958. The difference in the average age at marriage as between brides and bridegrooms is generally just over three years, the difference in 1958 being 3.36 years.

6. **Previous Conjugal Condition.**—The following table shows the relative conjugal condition of bridegrooms and brides in 1958.

CONJUGAL CONDITION OF BRIDEGROOMS AND BRIDES: AUSTRALIA, 1958.

Conjugal Condition of Bridegrooms.	Total. Bridegrooms.	Conjugal Condition of Brides.		
		Spinsters.	Widows.	Divorced.
Bachelors	66,657	62,547	1,254	2,856
Widowers	3,035	1,113	1,337	585
Divorced	4,309	2,296	575	1,438
Total Brides	74,001	65,956	3,166	4,879

7. **Birthplaces of Persons Marrying.**—A table showing the relative birthplaces of bridegrooms and brides married in each year will be found in the annual bulletin, *Demography*.

8. **Occupation of Bridegrooms.**—The distribution of the 74,001 bridegrooms for 1958 amongst classes of occupations was as follows:—craftsmen, 20,011; commercial and clerical, 13,219; operatives, 11,698; rural, fishing and hunting, 7,759; labourers, 8,103; professional and semi-professional, 4,263; domestic and protective service, 4,094; administrative, 2,884; not gainfully occupied and not stated, 1,970.

9. **Celebration of Marriages.**—In all the States, marriages may be celebrated either by ministers of religion who are registered for that purpose with the Registrar-General, or by certain civil officers—in most cases district registrars—but most of the marriages are celebrated by ministers of religion. The registered ministers in 1958 belonged to more than forty different denominations, some of which, however, have only very few adherents. A number of these have been combined under the heading "Other Christian". The figures for 1958 are shown in the following table:—

MARRIAGES IN EACH DENOMINATION, 1958.

Civil ..	14.50	8.60	3.11	11.33	15.66	14.58	10.45	21.30	11.10

§ 3. Divorce.

The number of dissolutions of marriage, nullities of marriage and judicial separations in 1958 was 6,983. Further information may be found in Chapter XVI.—Public Justice, and detailed tables relating to divorce statistics for 1958 and summary tables for earlier years in *Demography*, Bulletin No. 76.

§ 4. Fertility and Reproduction.

NOTE.—See NOTE at the beginning of this chapter.

1. **Introduction.**—Of the two elements of increase in the population, namely, natural increase and net migration, the former has been by far the more important over the past few decades. The level of natural increase depends on the excess of births over deaths and the relation between fertility and mortality determines the rate of reproduction or replacement of the population.

2. **Number of Live Births and Confinements.**—(i) *Year 1958.* There are various methods of measuring the fertility of the population by relating the number of births to the number in the population. In each the basic data are, of course, the numbers of live births.

The number of live births registered in Australia during 1958 is shown in the following table. The table shows also the number of confinements resulting in one or more live births. The figures exclude cases where the births were of still-born children only.

LIVE BIRTHS AND CONFINEMENTS, 1958.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W.A.	Tas.	N.T.	A.C.T.	Aus- tralia.
--------------	--------	------	---------	----------	------	------	------	--------	-----------------

LIVE BIRTHS.

Single births..	78,246	59,731	33,130	19,555	16,338	8,370	685	1,243	217,298
Twins ..	1,764	1,512	727	480	390	198	12	29	5,112
Triplets ..	35	26	15	12	3	3	94
Males ..	40,809	31,517	17,443	10,181	8,532	4,449	347	679	113,957
Females ..	39,236	29,752	16,429	9,866	8,199	4,119	350	596	108,547
Total ..	80,045	61,269	33,872	20,047	16,731	8,568	697	1,275	222,504

STILLBIRTHS ASSOCIATED WITH MULTIPLE BIRTHS INCLUDED ABOVE.

Twins ..	42	6	15	4	16	2	..	1	86
Triplets ..	1	1	2

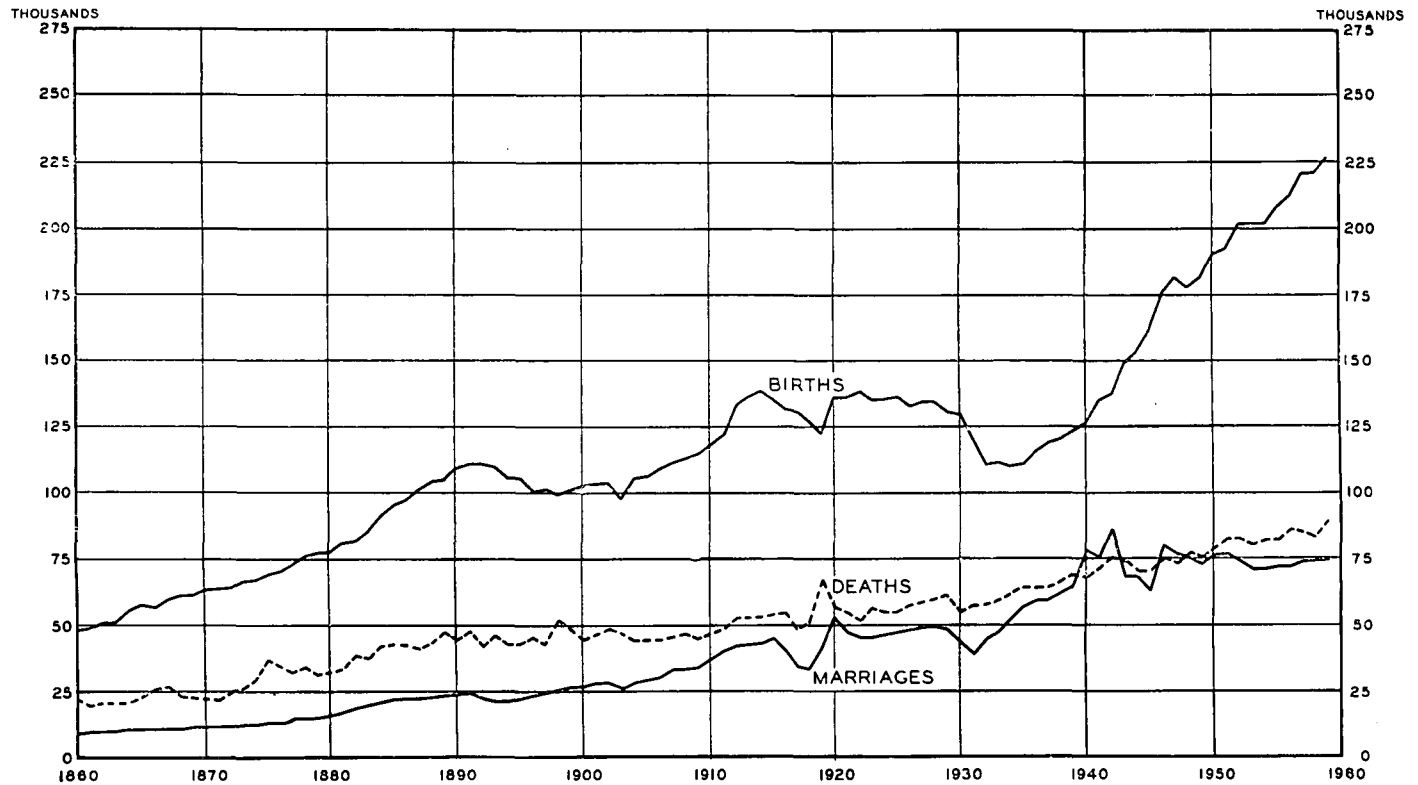

CONFINEMENTS RESULTING IN ABOVE BIRTHS.

Nuptial ..	75,370	58,309	31,532	19,072	15,695	8,099	593	1,238	209,908
Ex-nuptial ..	3,791	2,190	1,974	729	847	371	98	21	10,021
Total ..	79,161	60,499	33,506	19,801	16,542	8,470	691	1,259	219,929

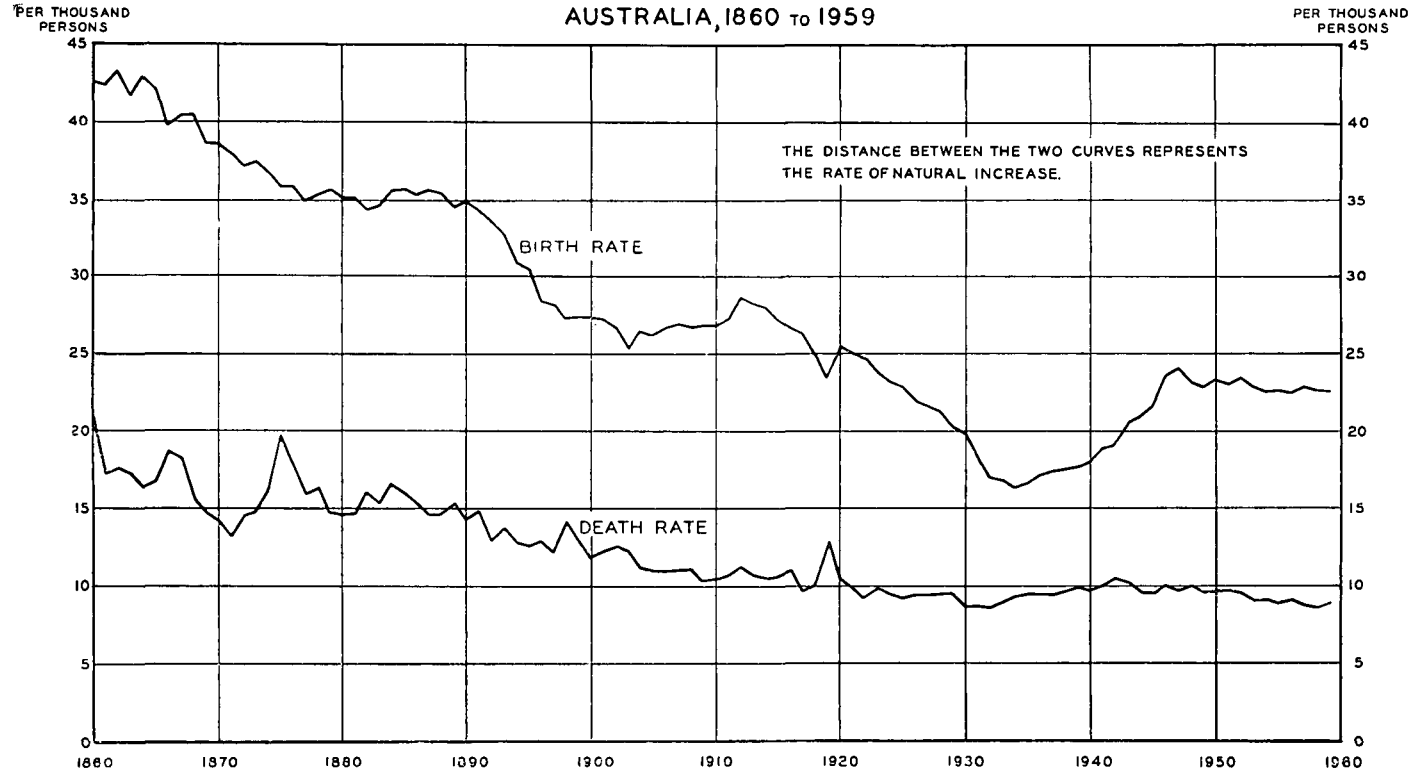

NOTE.—Owing to the registration procedure adopted in some States, it is possible that in some cases where one child only of a multiple pregnancy is live-born the confinement has been treated as a single birth. However, the numbers of multiple births are not significantly affected. See also para. 13, p. 344.

(ii) *Live Births, Years 1931 to 1959.* The average annual number of live births in each State and Territory for each five-year period from 1931 to 1955 and the total number of live births for each year from 1955 to 1959 are given in the following table. Corresponding figures for each five-year period from 1861 to 1950 were published in *Official Year Book* No. 39, page 583.

BIRTHS, DEATHS, AND MARRIAGES: AUSTRALIA, 1860 to 1959

A graph showing the number of births in each year from 1860 to 1959 will be found on page 335.

3. *Crude Birth Rates.*—The oldest and most popular method of measuring fertility is to relate the number of births to the total population, thus obtaining the crude birth rate. The crude birth rate measures the rate per thousand persons (irrespective of age or sex) at which the population has added to its numbers by way of births during a given period. Other methods of measuring fertility are shown on pages 340-3.

Crude birth rates for each five-year period from 1931 to 1955 and for each year from 1955 to 1959 for each State and Territory are set out below:—

CRUDE BIRTH RATES.(a)

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES.									
1931-35 ..	17.28	15.60	18.48	14.89	18.36	19.95	15.99	15.77	16.94
1936-40 ..	17.51	16.20	19.48	15.82	19.16	20.58	19.96	18.68	17.52

1946-50 ..	22.60	22.51	24.69	24.41	25.24	26.71	23.77	37.92	23.39
1951-55 ..	21.78	22.41	24.13	23.25	25.35	25.57	29.64	32.30	22.85
ANNUAL RATES.									
1955 ..	21.31	22.30	24.16	22.55	25.23	25.59	30.22	32.56	22.57
1956 ..	21.29	22.42	23.72	22.35	24.98	25.15	31.07	31.04	22.50
1957 ..	21.93	22.61	24.25	22.35	24.47	25.55	34.49	30.13	22.86
1958 ..	21.67	22.36	23.95	22.35	23.71	25.37	36.25	31.01	22.59
1959 ..	21.51	22.13	24.77	22.12	23.80	25.05	38.87	29.22	22.56

(a) Number of births per 1,000 of mean population. (b) Revised rates based on population estimates adjusted in accordance with the June, 1957 Population Count of Canberra are as follows:—1951-55, 32.22; 1955, 26.30; 1956, 30.47; 1957, 29.84.

NOTE.—The birth rates in the table above are based on live births registered in the respective States and Territories. Prior to 1939, a large proportion of births in respect of which the mother's usual residence was the Australian Capital Territory took place in Queanbeyan, just over the New South Wales border. With improved hospital facilities in the Territory, the position was reversed until late in 1952, when maternity accommodation was provided at the Queanbeyan District Hospital. The following rates, based on births in respect of which the mother's usual residence was the Australian Capital Territory, are a truer measure of birth rates in the Australian Capital Territory.

Average Annual Rates.				Annual Rates.			
1931-1935	19.53	1955	(a)26.53
1936-1940	19.29	1956	(a)30.64
1941-1945	23.06	1957	(a)29.58
1946-1950	27.13	1958	31.04
1951-1955	(a)28.39	1959	29.52

(a) Revised rates based on population estimates adjusted in accordance with the June, 1957 Population Count of Canberra are as follows:—1951-55, 28.32; 1955, 26.27; 1956, 30.07; 1957, 29.29.

The variations similarly caused in the birth rates for the States and the Northern Territory by referring the birth registrations to the State or Territory in which the mother was usually resident are shown by the following corrected rates for 1959:—New South Wales, 21.52; Victoria, 22.10; Queensland, 24.78; South Australia, 22.10; Western Australia, 23.83; Tasmania, 25.12; and Northern Territory, 38.53.

A graph showing the birth rate for each year from 1860 to 1959 will be found on page 336.

In the earlier years of the present century the crude birth rate fluctuated somewhat, but from 1912, when 28.60 was recorded, there was an almost continuous decline to the very low figure of 16.39 in 1934. The decline in the depression years was occasioned to some extent by the postponement of marriages. With subsequent improvement in economic conditions the rate rose, and in 1940 it increased quite appreciably, owing to a continued improvement in the economic welfare of the community and the war-time boom in marriages. The improvement in the birth rate has been substantially maintained since the end of the war despite some falling off in marriage rates. The post-war peak of 24.07 was recorded in 1947.

4. **Crude Birth Rates, Various Countries.**—The following table gives crude birth rates for Australia in comparison with rates for various other countries:—

CRUDE BIRTH RATES(a): VARIOUS COUNTRIES.

Country.	1921- 25.	1926- 30.	1931- 35.	1958.	Country.	1921- 25.	1926- 30.	1931- 35.	1958.
Canada ..	27.4	24.1	21.4	27.7	Finland ..	24.7	22.5	19.5	18.5
Union of South Africa(b)	27.1	25.9	24.1	25.7	France ..	19.3	18.2	16.5	18.1
New Zealand(c)	22.2	19.7	17.0	25.2	Norway ..	22.2	18.0	15.2	18.1

					Denmark ..	22.3	19.4	17.7	16.5
					Sweden ..	19.1	15.9	14.1	14.2

(a) Number of births per 1,000 of mean or mid-year population. (b) While population only.
(c) Excludes Maoris. (d) 1933-35. (e) Excludes full-blood aborigines.

5. **Fertility Rates.**—The principal demographic factors affecting the level of crude birth rates are the proportion of women of child-bearing age in the population and the proportion of such women who are married. These factors may vary considerably at different periods and for different countries, and a population with a higher proportion of married women of child-bearing age will have a much higher crude birth rate than one with a low proportion, although the fertilities of the two populations may be identical.

In order to compare fertilities, births are sometimes related to the number of women of child-bearing age or, alternatively, nuptial births are related to the number of married women of child-bearing age. Thus births are related to potential mothers, giving the fertility rate.

The following table sets out for certain periods, commencing with 1880-82, the number of births per thousand of mean population, the number of births per thousand women of child-bearing age and the number of nuptial births per thousand married women of child-bearing age. For purposes of this table the child-bearing age has been taken to be 15-44 years inclusive, but births to mothers who were stated to be under 15 or over 44 years have been included in the compilations.

CRUDE BIRTH RATES AND FERTILITY RATES: AUSTRALIA.

Period.	Average Annual Rates.			Index Nos. (Base: 1880-82 = 100).		
	Crude Birth Rate.(a)	Fertility Rates.		Crude Birth Rate.(a)	Fertility Rates.	
		Births per 1,000 Women aged 15-44 Years.	Nuptial Births per 1,000 Married Women aged 15-44 Years.		Births per 1,000 Women aged 15-44 Years.	Nuptial Births per 1,000 Married Women aged 15-44 Years.
1880-82.. ..	35.3	170	321	100	100	100
1890-92.. ..	34.5	159	332	98	94	103

1910-12.. ..	27.2	117	236	77	69	74
1920-22.. ..	25.0	107	197	71	63	61
1932-34.. ..	16.7	71	131	47	42	41
1946-48.. ..	23.6	104	160	67	61	50
1953-55.. ..	22.7	109	149	64	64	46

(a) Number of births per 1,000 of mean population.

The table above shows how increasing proportions both of women of child-bearing age and of married women of child-bearing age inflate the crude birth rate. Thus, while the nuptial birth rate for married women increased by only 22 per cent. over the period 1932-34 to 1946-48 the crude birth rate rose by 41 per cent. due principally to the greatly increased number of marriages during that period.

6. Age-specific Fertility Rates for Females.—So long as customary ages at marriage do not change drastically, the main demographic factor affecting the number of births is the age composition of the potential mothers in the population. Within the child-bearing group the fertility of women of different ages varies considerably and a clearer view of the fertility of the population can be obtained from an examination of what are known as its age-specific fertility rates, that is, the number of births to women of specified ages per thousand women of those particular ages.

Age-specific fertility rates are more commonly expressed in age groups than in single ages. In the following table, such rates, calculated in terms of female births for the purpose of obtaining the gross and net reproduction rates described in para. 7, are shown in five-year age groups for Australia for the period 1921 to 1958.

AGE-SPECIFIC FERTILITY RATES(a): AUSTRALIA.

Age Group (Years).	1921.	1926.	1931.	1936.	1941.	1946.	1951.	1956.	1957.	1958.
15-19	12.83	14.02	13.08	12.18	11.90	12.63	18.59	20.84	21.26	21.81

(a) Number of female births per 1,000 women in each age group.

The table shows that in recent years the most fertile age group has been 20-24 years, whereas previously fertility had been highest for the 25-29 age group. The decline in fertility between 1921 and 1936 was general but was more pronounced in the higher age groups. During the period 1936 to 1958 a rise in fertility occurred in all age-groups below 40. The most noticeable increase has been in the 20-24 age group, in which, as mentioned, fertility is now highest, as the result of a marked trend towards earlier marriage.

7. Gross and Net Reproduction Rates for Females.—A single measure of reproduction known as the gross reproduction rate is obtained by adding together the specific fertility rates for each age in the child-bearing group. This measure indicates the number of female children who would be born on the average to women living right through the child-bearing period, if the conditions on which the rate is based continue. The rate is unaffected by the age composition of the potential mothers, and consequently it shows more clearly than the crude birth rate the reproductive propensity of the population. It is, however, an

imperfect measure of reproduction because it does not take into account the females who fail to live from birth to the end of the reproductive period. A more accurate measure of this nature is obtained by multiplying the specific fertility rates by the number of females in the corresponding age group of the stationary or life table population and summing the products. Allowance is thus made for the effect of mortality and the result is known as the net reproduction rate. The net reproduction rate indicates the average number of female children who would be born to women during their lifetime if they were subject at each age to the fertility and mortality rates on which the calculation is based. A constant net reproduction rate of unity indicates that the population will ultimately become stationary. If it continues greater than unity, the population will ultimately increase; if less than unity, it will ultimately decrease. The following table should be read in the light of the comment which follows it and of the index of marriage fertility in paragraph 9, page 343.

GROSS AND NET REPRODUCTION RATES: AUSTRALIA.

Year.	Gross Reproduction Rate.	Net Reproduction Rate.	Year.	Gross Reproduction Rate.	Net Reproduction Rate.
1881(a)	2.65	(b) 1.88	1947	1.493	(g) 1.416
1891(a)	2.30	(b) 1.73	1953	1.556	(g) 1.477
1901(a)	1.74	(c) 1.39	1954	1.558	(h) 1.497
1911	1.705	(d) 1.421	1955	1.594	(h) 1.532
1921	1.511	(e) 1.313	1956	1.608	(h) 1.546
1931	1.141	(f) 1.039	1957	1.662	(h) 1.598
1941	1.154	(f) 1.053	1958	1.667	(h) 1.603

(a) Approximate only. (b) 1881-1890 mortality experience used. (c) 1891-1900 mortality experience used. (d) 1901-1910 mortality experience used. (e) 1920-1922 mortality experience used. (f) 1932-1934 mortality experience used. (g) 1946-1948 mortality experience used. (h) 1953-1955 mortality experience used.

NOTE.—It is not strictly correct to assume, as in the calculations of the rates above, that a particular age-specific fertility rate can be applied to a hypothetical group of women reaching that age, without taking account of previous fertility and marriage experiences. Reproduction rates are therefore unreliable when birth and marriage rates have been changing. The indexes of marriage fertility shown on the next page are also of doubtful reliability in similar circumstances.

Since 1881, there has been a substantial downward trend in both rates, but the gross rate has fallen considerably more than the net, showing that the decline in fertility has been offset to some extent by a decline in mortality. The net reproduction rate was below unity over the period 1932 to 1939. If such low levels were to be experienced indefinitely, ultimate population decline would be certain. The progressive rise in both gross and net reproduction rates from 1939 to 1947 was due largely to higher marriage rates during the war and early post-war years than had been experienced in the immediate pre-war years. Owing to various influences, the number of marriages in each year since 1950 has remained at a relatively high level and the net reproduction rates have been rising slowly. The fertility of marriages is shown in paragraph 9 below.

8. Gross and Net Reproduction Rates, Various Countries.—In the following table, a comparison is given of the gross and net reproduction rates recorded for various countries in the period 1955 to 1958. These represent the latest available international comparison.

GROSS AND NET REPRODUCTION RATES: VARIOUS COUNTRIES.

Country.	Period.	Reproduction Rate.		Country.	Period.	Reproduction Rate.	
		Gross.	Net.			Gross.	Net.
Canada	1957	1.91	(a)	Norway	1956	1.37	1.32
New Zealand(b) ..	1957	1.89	1.82	Scotland	1957	1.33	1.27
United States of America(c) ..	1956	1.72	1.66	France	1956	1.30	1.24
Australia(d) ..	1958	1.67	1.60	Denmark	1956	1.26	1.14
Ireland, Republic of	1955	1.59	1.45	Switzerland ..	1957	1.24	1.18
Netherlands ..	1957	1.48	1.42	Belgium	1957	1.19	1.08
Portugal	1957	1.40	1.20	England and Wales	1956	1.15	1.11
Finland	1957	1.38	1.30	Sweden	1956	1.10	1.06

(a) Not available, full-blood aboriginals.

(b) Excludes Maoris.

(c) White population only.

(d) Excludes

In comparing the reproduction rates of the countries shown above, allowance should be made for any differences in years, as the rates for any one country from year to year are affected by variations in the incidence of marriage, as well as the stationary or life table population used.

9. **Fertility of Marriages.**—Estimates of the fertility of marriages which were published in issues of the Official Year Book prior to No. 36 were calculated by relating the births of one five-year period to the marriages in the preceding five years (*see* Official Year Book No. 35, p. 329). Since the publication of that issue, an improved method has been formulated for measuring current marriage fertility by relating nuptial confinements in each year to the marriages from which they could have resulted. Confinements of women of a certain number of years duration of marriage are related to the number of marriages taking place that number of years previously. The table below sets out this index of current fertility per marriage in respect of confinements in the individual years shown.

FERTILITY OF MARRIAGES: AUSTRALIA.

Year.	Nuptial Confinements per Marriage.	Year.	Nuptial Confinements per Marriage.	Year.	Nuptial Confinements per Marriage.
1944..	2.28	1949..	2.45	1954..	2.66
1945..	2.36	1950..	2.56	1955..	2.71
1946..	2.55	1951..	2.55	1956..	2.76
1947..	2.55	1952..	2.63	1957..	2.87
1948..	2.44	1953..	2.66	1958..	2.88.

NOTE.—See NOTE to table on page 342.

The figure for a particular year gives the estimated number of children which a marriage would produce according to the fertility conditions of that year. There was an almost continuous decline for a number of years to 1942, but a pronounced increase has since occurred. In comparing this index with the net reproduction rate, it is evident that the rise in the latter since 1935 has been caused mainly by a rise of the proportions of women married in the fertile age groups. Only since 1944 has there been an increase in the fertility of marriages compared with pre-war levels.

The figures for 1949 and subsequent years present a somewhat inflated index, as many of the births which have been used to calculate the index relate to marriages of immigrants which took place overseas and are consequently not included in Australian marriage records. Partial investigation suggests that this factor probably overstated the index by very little in 1949, but that the overstatement at present is about 8 per cent.

10. **Masculinity of Live Births.**—The masculinity of live births, i.e., the number of males born for every 100 female births, has remained fairly stable for Australia at about 105. But when the number of births for which masculinity is being calculated is small (for example, totals for smaller States), considerable variation is shown. The averages for the ten years 1941–50 were as follows:—New South Wales, 105.49; Victoria, 105.47; Queensland, 105.49; South Australia, 105.78; Western Australia, 104.27; Tasmania 104.45; Northern Territory, 100.20; Australian Capital Territory, 104.91; Australia, 105.38. The following table shows the figures for Australia for each ten-year period from 1901 to 1950 and for each of the years 1956 to 1959:—

MASCULINITY(a) OF LIVE BIRTHS REGISTERED: AUSTRALIA.

Particulars.	1901–10.	1911–20.	1921–30.	1931–40.	1941–50.	1956.	1957.	1958.	1959.
Total Births	105.22	105.27	105.55	105.12	105.38	106.87	105.71	104.98	104.97
Ex-nuptial Births	104.08	105.25	105.16	105.36	105.34	107.16	102.86	104.83	103.72

(a) Number of males born for every 100 female births.

11. **Ex-nuptial Live Births.**—(i) *General.* The highest proportion of ex-nuptial births in any one year since 1901 was recorded in 1905, when there were 6,545 ex-nuptial births, representing 6.24 per cent. of total births. Since then, the proportion has declined. The largest number of ex-nuptial births was recorded in 1959, when 10,687 were registered, but this number represented only 4.71 per cent. of total births. The lowest proportion was 3.78 per cent. in 1940.

The variations in the proportions of ex-nuptial births as between the individual States and Territories for 1958 are shown below.

EX-NUPTIAL LIVE BIRTHS: NUMBER AND PROPORTION, 1958.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Number ..	3,832	2,219	1,993	738	854	375	99	21	10,131
Proportion of Total Births %	4.79	3.62	5.88	3.68	5.10	4.38	14.20	1.65	4.55

The number and proportion of ex-nuptial births at intervals from 1901 to 1958 are as follows:—

EX-NUPTIAL LIVE BIRTHS: NUMBER AND PROPORTION, AUSTRALIA.

Particulars.	Annual Average.					1955.	1956.	1957.	1958.
	1901-10.	1911-20.	1921-30.	1931-40.	1941-50.				
Number ..	6,498	6,836	6,238	5,133	6,780	8,537	8,970	9,362	10,131
Proportion of Total Births .. %	6.05	5.22	4.66	4.40	4.13	4.11	4.23	4.25	4.55

It is possible that the number of ex-nuptial births is somewhat understated owing to diffidence in proclaiming the fact of ex-nuptiality.

(ii) *Rate of Ex-nuptiality.* A further comparison is obtained by calculating the number of ex-nuptial births per thousand of the single, widowed and divorced female population aged from 15 to 44 years. On this basis, the number of ex-nuptial births per 1,000 unmarried women of ages 15 to 44 is as follows:—1880-82, 14.49; 1890-92, 15.93; 1900-02, 13.30; 1910-12, 12.53; 1920-22, 10.50; 1932-34, 6.91; 1946-48, 11.45; and 1953-55, 14.45. Ex-nuptial births to married women, which are not recorded separately, are included in these figures and it is not possible to determine to what extent they influence the trend shown.

(iii) *Comparison of Rates.* The following table, showing the relative proportions of ex-nuptial and nuptial births to the total population, discloses a much greater proportional movement in the ex-nuptial birth rate than in the nuptial rate:—

CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH RATES(a): AUSTRALIA

Birth Rate.	Annual Average.					1955.	1956.	1957.	1958.
	1901-10.	1911-20.	1921-30.	1931-40.	1941-50.				
Ex-nuptial ..	1.60	1.39	1.04	0.76	0.90	0.93	0.95	0.97	1.03
Nuptial ..	24.91	25.18	21.40	16.47	20.99	21.64	21.55	21.89	21.56
Total ..	26.51	26.57	22.44	17.23	21.89	22.57	22.50	22.86	22.59

(a) Number of births per 1,000 of mean population.

12. *Legitimations.*—Acts have been passed in the several States to legitimize children born before the marriage of their parents, provided that no legal impediment to the marriage existed at the time of birth. On registration in accordance with the provisions of the Legitimation Acts, any child who comes within the scope of their purposes, born before or after the passing thereof, is deemed to be legitimate from birth by the post-natal union of its parents, and entitled to the status of offspring born in wedlock. During 1958, the number of children legitimized in Australia was 939.

13. *Multiple Births.*—Because the current Australian birth statistics are based only on those confinements which resulted in a live-born child, the number of confinements for multiple births for Australia is understated—firstly, because in cases where all children of a multiple birth are still-born the confinement is excluded, and secondly, because some cases of multiple births in which only one child was live-born are registered as single births.

During 1958, multiple births recorded on the above basis comprised 2,599 cases of twins and 32 cases of triplets, the resultant numbers of live-born and still-born children being respectively 5,112 and 86 for twins, 94 and 2 for triplets. This represents an average of 11.82 recorded cases of twins and 0.14 recorded cases of triplets per 1,000 confinements or, alternatively, mothers of twins represented 1 in every 85 mothers and mothers of triplets 1 in every 6,873. Total cases of multiple births represented 11.96 per 1,000 confinements or 1 in every 84 mothers.

The proportion of mothers of multiple births to total mothers does not vary greatly from year to year.

14. *Ages of Parents.*—The relative ages of the parents of children whose births were registered in 1958 have been tabulated separately for male and female births, multiple births being distinguished from single births. For total births and for multiple births, the relative ages of parents are shown in *Demography*, Bulletin No. 76. In the following table, the relative ages of parents are shown in five year groups.

CONFINEMENTS: RELATIVE AGES OF PARENTS, AUSTRALIA, 1958.

(a) Includes eight mothers whose ages were not stated.

15. *Birthplaces of Parents.*—A table showing birthplaces of parents of children whose births were registered during 1958 appears in *Demography*, Bulletin No. 76.

16. *Occupation of Fathers.*—A table showing occupations of the fathers of nuptial children whose births were registered in 1958 appears in *Demography*, Bulletin No. 76.

17. *Age, Duration of Marriage and Issue of Mothers.*—(i) *General.* The total number of nuptial confinements resulting in live births in 1958 was 209,908, comprising 207,390 single births, 2,486 cases of twins and 32 cases of triplets. The tables relating to previous issue exclude the issue of former marriages and still-born children. On the other hand, they include in some States children by the same father who were born to the mother prior to the marriage. Children born at the present confinement are included in the total issue shown.

(ii) *Duration of Marriage and Issue of Mothers.* The following table shows that in 1958 the duration of marriage of mothers of nuptial children ranged from less than one year to over 25 years and that the average family increased fairly regularly with the duration of marriage. The average issue of married mothers who bore children in 1958 was 2.56, compared with 2.54 in 1957, 2.52 in 1956, 2.50 in 1955, and 2.48 in 1954.

NUPTIAL CONFINEMENTS: DURATION OF MARRIAGE AND ISSUE OF MOTHERS, AUSTRALIA, 1958.

Duration of Marriage.	Total Married Mothers.	Total Issue.	Average Issue.	Duration of Marriage.	Total Married Mothers.	Total Issue.	Average Issue.

(iii) *Age and Average Issue of Mothers.* The following table shows the average number of children born to mothers of different ages. In the younger ages there is, naturally, little difference in the average number of children to each mother from year to year, but for mothers in the higher age groups the number of issue has fallen, until recently, in comparison with past years. In 1958, average issue was greater in all age groups under 40 years than in the decade 1941–50. The average issue of mothers of all ages recorded for 1958 (namely, 2.56) is 21.2 per cent. below the average of 3.25 for the years 1911–20.

AGE AND AVERAGE ISSUE OF MOTHERS: AUSTRALIA.

Period.	Age of Mother (Years).							All Ages.

1958 ..	65,431	144,477	209,908	31.17

19. *Stillbirths.*—The registration of stillbirths has been compulsory in Western Australia since 14th January, 1908; in the Australian Capital Territory since 1st January, 1930; in New South Wales since 1st April, 1935; in South Australia since 1st May, 1937; in the Northern Territory since 1st July, 1949; in Victoria from 1st January, 1953; and in Queensland from 22nd March, 1959. In Tasmania, where registration is not compulsory some information is obtained by voluntary registration and notification of stillbirths for various purposes. Because registration is not compulsory in all States, detailed statistics of stillbirths for Australia as a whole have not been compiled.

The number of stillbirths in each State and Territory, as recorded since 1936 by the means outlined above, is shown in the following table:—

STILLBIRTHS.

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

(a) Numbers of stillbirths per 1,000 of all births (live and still). (b) Not available. (c) Three years 1938-40. (d) Four years 1942-45. (e) Excludes Queensland for 1941. (f) Excludes the Northern Territory.

§ 5. Mortality.

NOTE.—See NOTE at the beginning of this chapter. A detailed analysis for 1958 of causes of death and other characteristics such as issue will be found in *Demography*, Bulletin No. 76.

1. Number of Deaths.—(i) Year 1959. The following table shows the number of deaths, male and female, registered in each State and Territory during the year. Stillbirths, although registered as both births and deaths in some States, are excluded from the death statistics published herein.

DEATHS, 1959.

Sex.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Males ..	19,857	13,730	7,276	4,425	3,240	1,553	101	111	50,293
Females ..	15,392	11,348	5,073	3,518	2,257	1,227	23	81	38,919
Persons ..	35,249	25,078	12,349	7,943	5,497	2,780	124	192	89,212

(ii) *Years 1931 to 1959.* A summary of the number of deaths in each State and Territory from 1931 to 1959 is given in the following table. Annual averages for each five-year period from 1861 to 1950 were published in Official Year Book No. 39, page 597.

DEATHS.

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
ANNUAL AVERAGES.

1959 ..	35,249	25,078	12,349	7,943	5,497	2,780	124	192	89,212

(a) Excludes deaths of defence personnel and of internees and prisoners of war from overseas for the period September, 1939 to June, 1947.

A graph showing the number of deaths in each year from 1860 to 1959 will be found on page 335.

2. *Crude Death Rates.*—The commonest method of measuring the mortality rate is to relate the number of deaths for a given period to the mean population for that period, thus obtaining the crude death rate. This rate for a given period measures the number per thousand of population by which the population is depleted through deaths during that period. Crude death rates for each State and Territory from 1931 to 1959 are shown in the following table.

CRUDE DEATH RATES.(a)

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES.									
1931-35 ..	8.68	9.72	8.62	8.72	8.83	9.63	13.46	3.81	9.00
1936-40(b) ..	9.43	10.36	9.08	9.33	9.22	9.91	11.69	4.54	9.63
1941-45(b) ..	9.73	10.63	9.24	10.26	9.86	10.21	6.43	4.98	9.96
1946-50(b) ..	9.70	10.37	9.13	9.76	9.23	9.30	6.27	5.31	9.74
1951-55 ..	9.49	9.55	8.71	9.25	8.49	8.47	6.92	(c)4.60	9.25
ANNUAL RATES.									
1955 ..	9.32	8.92	8.44	9.19	8.17	7.87	6.98	(c)3.89	8.91
1956 ..	9.58	9.17	8.92	8.95	8.23	7.80	5.98	(c)4.81	9.13
1957 ..	9.20	9.03	8.39	8.67	7.66	8.09	6.14	(c)4.46	8.81
1958 ..	8.76	8.62	8.10	8.63	7.87	8.02	5.51	4.43	8.50
1959—									
Males ..	11.05	9.70	9.90	9.49	8.80	8.67	8.88	4.49	9.89
Females ..	8.20	8.13	7.22	7.74	6.44	7.42	2.53	3.70	7.82
Persons ..	9.38	8.92	8.59	8.62	7.65	8.07	6.06	4.12	8.87

(a) Number of deaths per 1,000 of mean population. (b) Excludes deaths of defence personnel from September, 1939 to June, 1947. (c) Revised rates based on population estimates adjusted in accordance with the June, 1957 Population Count of Canberra are as follows:—1951-55, 4.58; 1955, 3.85; 1956, 4.72; 1957, 4.42.

A graph showing the crude death rate for each year from 1860 to 1959 will be found on page 336.

3. **Standardized Death Rates.**—(i) *General.* The death rates quoted above are crude rates, i.e., they simply show the number of deaths per thousand of mean population without taking into consideration differences in the sex and age composition of the population. Other conditions being equal, however, the crude death rate of a community will be low if it contains a large proportion of young people (not infants), and conversely it will be relatively high if the population includes a large proportion of elderly people. The foregoing table of crude death rates, therefore, does not indicate comparative incidence of mortality either as between States in the same year or in any one State over a period of years. In order to obtain a comparison of mortality rates on a uniform basis as far as sex and age constitution are concerned, "standardized" death rates may be computed. These are computed by selecting a particular distribution of age and sex as a standard, and then calculating what would have been the general death rate if the death rates for each sex and in each age group had been as recorded, but the age and sex distribution had been the same as in the standard population. For the standardized rates which follow, the standard population compiled by the International Institute of Statistics has been used. This standard is based upon the age distribution according to sex of nineteen European countries at their censuses nearest to the year 1900.

(ii) *Death Rates in Age Groups.* An examination of the age distribution of deaths and the resultant age-specific death rates is made in paragraph 9, page 360.

(iii) *Comparison of Crude and Standardized Death Rates.* The relative incidence of mortality as between individual States and as between the years 1921, 1933, 1947 and 1954 is illustrated in the following statement of crude and "standardized" death rates. These years have been chosen for comparison because the census data give essential information as to sexes and ages of the State populations. Crude death rates are shown to indicate the degree to which they disguise the true position.

CRUDE AND STANDARDIZED DEATH RATES.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Crude Death Rate(a)—							
1921	9.50	10.52	9.37	10.02	10.42	10.30	9.91
1933	8.58	9.59	8.84	8.44	8.64	9.60	8.92
1947	9.53	10.44	9.15	9.61	9.39	9.17	9.69
1954	9.46	9.19	8.64	9.01	8.38	8.67	9.10
Standardized Death Rate(b)—							
1921	10.35	10.79	10.24	10.38	11.88	10.83	10.58
1933	8.52	8.74	9.10	7.66	8.74	8.86	8.62
1947	7.44	7.31	7.47	6.77	7.28	7.21	7.34
1954	7.24	6.63	6.80	6.52	6.71	7.02	6.90

(a) Total deaths per 1,000 of mean population.
in para. 3 (i) above.

(b) See explanation of standardized death rates

The comparisons above relate to individual years in which a census of population was taken and should not be used as the basis for general conclusions as to changes in incidence of mortality for other than those years.

4. **True Death Rates.**—The main objections to standardized death rates are that the choice of a standard population is arbitrary and that the standardized rates have little value except for comparative purposes, and even then variation of the standard population may make appreciable differences. However, a correct measurement of the mortality of the population can be obtained from life tables. A life table represents the number of survivors at each age from a group of newly-born children who are subject to given mortality conditions, and from such a table the complete expectation of life at birth can be calculated. The reciprocal of this figure is known as the true death rate, since, if the complete expectation of life of a person at birth is 50 years, say, then each person will on the average die 50 years after birth, so that in the standard population one person in 50 or 20 per thousand will die each year. The true death rate for a given period is unaffected by the particular age distribution of that period and is determined solely by the mortality experience of the period as manifested in the rate of survival from each year of age to the next. The table below sets out complete expectation of life at birth and true death rates for the periods covered by Australian life tables.

COMPLETE EXPECTATION OF LIFE AT BIRTH AND TRUE DEATH RATES: AUSTRALIA.

Period.	Complete Expectation of Life at Birth (Years).		True Death Rate.	
	Males.	Females.	Males.(a)	Females.(b)
1881-1890	47.20	50.84	21.19	19.67
1891-1900	51.06	54.76	19.58	18.26
1901-1910	55.20	58.84	18.12	17.00
1920-1922	59.15	63.31	16.91	15.80
1932-1934	63.48	67.14	15.75	14.89
1946-1948	66.07	70.63	15.14	14.16
1953-1955	67.14	72.75	14.89	13.75

(a) Number of deaths per 1,000 males in life table or stationary population.

(b) Number of deaths per 1,000 females in life table or stationary population.

5. Crude Death Rates, Various Countries.—The following table gives crude death rates for Australia in comparison with rates for various other countries.

CRUDE DEATH RATES(a): VARIOUS COUNTRIES.

Country.	1921-25.	1926-30.	1931-35.	1958.	Country.	1921-25.	1926-30.	1931-35.	1958.

Australia(d) ..	1953-55	14.9	13.7	Belgium ..	1946-49	16.1	14.9
				Austria ..	1949-51	16.2	14.9

(a) Number of deaths per 1,000 males in life table or stationary population (see explanation on p. 351).

(b) Number of deaths per 1,000 females in life table or stationary population (see explanation on p. 351).

(c) Excludes Maoris.

(d) Excludes full-blood aborigines.

(e) White population only.

7. *Australian Life Tables.*—(i) *Life Tables prior to 1954.* It has been the practice at each census from 1911 onwards to prepare Life Tables representative of the mortality experience of Australia. The mortality of the Australian population for the thirty years from 1881 to 1910 inclusive was investigated in 1911 by the Commonwealth Statistician. Tables were compiled for each State and for Australia as a whole in respect of each sex for each of the decennial periods 1881–1890, 1891–1900 and 1901–1910. These compilations furnished a comprehensive view of Australian mortality in respect of sex, of time, and of geographical distribution, and practically superseded all Life Tables prepared in Australia prior to 1911. In addition, monetary tables based on the experience for the whole of Australia for the ten years 1901–1910 were prepared and published.

At the Census of 1921, Life Tables were prepared by the Commonwealth Statistician from the population recorded and the deaths in the three years 1920 to 1922. In 1933 and 1947, Life Tables based on the census population and the deaths in the years 1932 to 1934 and 1946 to 1948 respectively were compiled by the Commonwealth Actuary.

(ii) *Life Tables of Census of 1954.* On the occasion of the 1954 Census, the seventh in the series of Life Tables were compiled by the Commonwealth Actuary. These were based on the population recorded at the Census, adjusted to allow for variation in the net movement into Australia over the years 1953 to 1955, and deaths during these years. Full particulars of the data used, the method of construction and the tabulations of these Life Tables will be found in the report of the Commonwealth Actuary which was published by the Commonwealth Statistician in 1958. This report will also appear in Volume VIII of the detailed tables of the 1954 Census.

The main features of the tables, including comparisons with earlier Australian tables and the latest experience in the United Kingdom and New Zealand are set out in the following summary tables.

COMPARATIVE TABLES.

1. RATES OF MORTALITY (q_x) AT REPRESENTATIVE AGES.

7. RATES OF MORTALITY FROM 1953-55 AUSTRALIAN EXPERIENCE, AS A PROPORTION OF THE RATES FOR THE UNITED KINGDOM AND NEW ZEALAND.

Age (x).	Males.		Females.	
	Australia 1953-55 United Kingdom 1950-52.	Australia 1953-55 New Zealand 1950-52.	Australia 1953-55 United Kingdom 1950-52.	Australia 1953-55 New Zealand 1950-52.
077	1.01	.79	1.00
10	1.08	1.12	1.00	1.25
20	1.44	1.16	.77	.94
30	1.08	1.06	.76	.87
40	1.02	1.11	.96	1.04
5096	1.13	1.01	.96
6094	1.14	.95	.91
7094	1.13	.92	.99
8088	1.06	.89	1.00

The main features of the mortality rates are:—

(a) *Male Mortality.* With the exception of ages 16 to 26 inclusive, and 69 to 73 inclusive, the 1953-55 mortality rates are less than those for 1946-48. The most significant reduction has occurred at age 0, where the mortality rate is 79 per cent. of the corresponding rate for 1946-48, and only 27 per cent. of the experience for the period 1901-1910.

The most disturbing feature of the current experience has been the increase in mortality which has occurred in the 16-26 age group. This is the result of heavier mortality from accidents of all types, which has more than counterbalanced a decrease in the rates of mortality due to other causes.

At advanced ages, the experience suggests that only a slight improvement in male mortality has occurred since 1946-48.

(b) *Female Mortality.* The comparative tables above show that very substantial decreases in female mortality rates have occurred over the whole range of ages since the 1946-48 experience. This improvement has been considerably greater overall than that for males.

Accident mortality among females, which has never been as significant as among males has increased very slightly but this increase has been more than offset by the reduction in the mortality from other causes. There is a notable disparity between the high male accident rate and the low female rate.

In the 1946-48 experience, female mortality from causes other than accident was, in the age range 20 to 39 years, heavier than the corresponding male mortality. For 1953-55, however, the position has been reversed. At high ages the female mortality rates have shown substantially greater improvement since 1946-48 than the male rates.

8. Infant Deaths and Death Rates.—(i) *States.* (a) *Under One Year.* For each State and Territory the number of deaths under one year of age and the rates of infant mortality during the period 1931 to 1959 were as follows:—

INFANT MORTALITY: UNDER ONE YEAR.

1958 ..	5.98	4.75	5.64	8.68	7.17	7.12	14.35	6.27	5.99

(a) Number of deaths of children aged four weeks and under one year per 1,000 live births registered.

(ii) *Australia. (a) Under One Year.* The universal experience that during the first few years of life the higher death rate of male infants tends to counteract the excess of male births, is confirmed by the fact that out of 546,788 male infants born from 1954 to 1958, 13,098 (23.95 per 1,000) died during the first year of life, while of 518,140 female infants only 9,905 (19.12 per 1,000) died during the first year. Stillbirths, for which masculinity is also higher, are not included in any of the tables relating to deaths.

As shown by the following table, the disparity is greater during the first four weeks of life, termed the neonatal period, than during the remainder of the first year of life, or the post-neonatal period.

INFANT DEATHS AND MORTALITY RATES: AUSTRALIA.

(c) Includes

The foregoing tables indicate the decrease in infant mortality in Australia, the mortality rate of children aged under one year per 1,000 live births for 1958 being 50 per cent. of the average rate for 1931-35. The improvement was due largely to the decrease in deaths from preventable causes, the mortality rate for children aged one week but under one year of age declining by 58 per cent., while that for children aged under one week declined by 43 per cent.

A graph showing infant mortality rates for each year from 1910 to 1959 will be found on page 337.

(iii) *Statistical Divisions.* The total numbers of births and of deaths of children under one year of age in each statistical division are shown in the annual bulletin, *Demography*.

(iv) *Various Countries.* Compared with other countries Australia occupies a favourable position in respect of infant mortality. In 1958, only New Zealand, Sweden and the Netherlands recorded a lower rate than Australia.

(a) Number of deaths under one year per 1,000 live births registered. (b) Number of live births per 1,000 of mean or mid-year population. (c) Excludes Maoris. (d) 1935-39.

(e) Not available. (f) Excludes full-blood aboriginals. (g) White population only.

(h) 1935-38.

(v) *Causes of Death: Children under one Year.* Causes of death of children under one year of age should be considered in relation to age at death, because the emphasis on various causes changes rapidly as age at death varies. In 1958, congenital malformations (13.2 per cent.) and certain diseases of early infancy (84.7 per cent.) accounted for 97.9 per cent. of deaths in the first week of life. These causes accounted for 81.2 per cent. of the deaths in the second, third and fourth weeks of life (38.8 per cent. and 42.4 per cent. respectively). Of the remaining deaths in the first year of life, these causes only accounted for 25.6 per cent. (21.7 per cent. and 3.9 per cent. respectively), the emphasis having shifted to respiratory and digestive diseases (34.6 per cent.), accidents and violence (7.7 per cent.), infective and parasitic diseases (5.4 per cent.) and diseases of the nervous system (5.7 per cent.). A summary for 1958 of deaths of children under one year of age, classified according to principal causes of death and age at death, is given in the following table.

CAUSES OF DEATH: CHILDREN UNDER ONE YEAR OF AGE, AUSTRALIA, 1958.

(a) Age four weeks and under two months.

(b) For further detail of this group of causes see next table.

The individual categories representing the causes of death which come within Class XV.—Certain Diseases of Early Infancy are designed to show the effect of immaturity in such causes of infant death. In 1958, 67 per cent. of deaths in this class during the first four weeks of life were due, directly or indirectly, to immaturity. Particulars of the individual categories in this class are shown for various age groups, with and without mention of immaturity, in the following table. Details of cause of death without mention of immaturity are in italics. In respect of deaths which occur in the first week of life ages are shown in days and in weeks for deaths which occur in the first month of life.

(vi) *Deaths of Ex-nuptial Children under one Year of Age.* Distinction between nuptial and ex-nuptial children in death statistics for Australia as a whole was made from 1925 to 1958. Results show that death rates during infancy were higher for ex-nuptial children than for nuptial children, but in recent years this position was reversed.

Detailed information for Australia as to the age at which ex-nuptial children died from each cause of death will be found in the annual bulletin, *Demography*, up to issue No. 76, 1958. Because of the small number of ex-nuptial deaths involved in each case, it is difficult to assess the real significance of the differences between the numbers of nuptial and ex-nuptial deaths from each individual cause.

9. *Age Distribution.*—(i) *Number of Deaths.* Age at death is recorded for statistical purposes in days for the first week of life, in weeks for the first four weeks, in months for the first year and in completed years of life thereafter. These ages are usually combined in groups for publication, the most common being weeks for the first four weeks, months or groups of months for the first year, single years of age for the first five years and thereafter the five-year groups 5–9 years, 10–14 years, etc. A summary in this form for Australia is given in the following table for the year 1958.

AGE AT DEATH: AUSTRALIA, 1958.

There are different mortality rates at various stages of life and the actual number of deaths in any period is related to the numbers living at the respective stages. Changes in the number of deaths from one period to another are associated with changes in the rate of mortality in the various age groups and by the changed proportions of persons living in the different groups.

In Australia, during the last fifty years, there has been a steady decline in the rate of mortality at all ages. This has been most pronounced at ages under one year. The increased length of life due to this factor coupled with the long-term decline in the birth rate and the effects of past and present migration, has been a significant cause in changing the age distribution of the population and consequently the age distribution of deaths, thus obscuring the effects of declining mortality rates.

The combined effect of these various influences can be seen from the following table which shows the proportion of deaths in various age groups in ten-year periods from 1901 to 1950 and for the year 1958.

PROPORTION OF DEATHS IN EACH AGE GROUP: AUSTRALIA.
(Per Cent.)

Period.	Age at Death (Years).								
	Under 1.	1-4.	5-19.	20-39.	40-59.	60-64.	65 and over.	Unspecified.	Total.
1901-10 ..	20.51	6.45	6.37	14.99	17.99	5.31	28.26	0.12	100.00
1911-20 ..	16.66	6.09	5.49	14.44	20.32	6.19	30.68	0.13	100.00
1921-30 ..	13.10	4.51	4.85	12.12	20.55	8.26	36.53	0.08	100.00
1931-40 ..	7.40	2.56	3.83	9.36	20.54	8.36	47.92	0.03	100.00
1941-50 ..	6.79	1.71	2.26	6.01	19.04	9.33	54.84	0.02	100.00
1958—									
Males ..	5.50	1.18	2.08	5.70	19.71	9.87	55.91	0.05	100.00
Females ..	5.37	1.16	1.37	3.50	14.10	7.54	66.94	0.02	100.00
Persons ..	5.45	1.17	1.77	4.73	17.25	8.85	60.75	0.03	100.00

A table showing these proportions for males and females separately for the period 1901 to 1950 was published in Official Year Book No. 39, page 614.

(ii) *Age-specific Death Rates.* In previous issues of the Official Year Book, average annual age-specific death rates were given for each State and Australia for the periods 1932-34, 1946-48 and 1953-55 (see Official Year Books, No. 37, page 778; No. 39, pages 615-6 and No. 44, pages 640-1). These rates were based on the age distribution of the population at the relevant censuses.

Intercensal estimates of the age distribution of the population are available only for Australia as a whole and not for the individual States. As a consequence, age-specific death rates for States are not available. The following table shows age-specific death rates for Australia for the years 1956, 1957 and 1958.

AGE-SPECIFIC DEATH RATES(a): AUSTRALIA.

Age Group (Years).	1956.	1957.	1958.	Age Group (Years).	1956.	1957.	1958.

(a) Average number of deaths per 1,000 of population in each age group.

10. *Causes of Death.*—The classification of causes of death adopted for Australia by the Commonwealth Bureau of Census and Statistics at the inception of its mortality statistics in 1907 was that introduced by the International Institute of Statistics in 1893, reviewed by that Institute in 1899, and revised by an International Commission in 1900. This classification became known as the International List of Causes of Death and further international revisions in 1909 (Second), 1920 (Third), 1929 (Fourth), 1938 (Fifth), 1948 (Sixth), and 1955 (Seventh), were successively adapted for use in Australian statistics.

The Sixth Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death was used in Australia from 1950 to 1957. The Seventh Revision was first used for deaths which occurred during 1958. The Sixth Revision, for the first time in connexion with the International List, laid down rules for a uniform method of selecting the main cause to be tabulated, if more than one cause is stated on the death certificate. These rules were maintained in the Seventh Revision which was concerned mainly with certain essential changes and amendment of errors and inconsistencies in the previous classification. Prior to 1950, the rules adopted in Australia for the selection of the cause of death to be tabulated were those laid down in the United States Manual of Joint Causes of Death, first published in 1914 and revised to conform with successive revisions of the International List.

The adoption of the new method, introduced with the Sixth Revision and maintained in the Seventh, marked a fundamental change in Australian cause of death statistics, with emphasis now placed on the underlying cause of death as indicated by the certifying practitioner. The introduction of this method required the adoption by all States of a form of medical certificate substantially identical with the International Form of Medical Certificate of Cause of Death as laid down in Article 9 of the World Health Organization Regulations No. 1. By 1950, all States had adopted satisfactory forms of certificate and it was possible to apply the new principles uniformly to all State cause of death records.

This change in principle affects the comparability of the statistics for 1950 and subsequent years with those for earlier years. For convenience in assessing the extent of the change and in accordance with a recommendation of the Sixth Decennial Revision Conference, causes of death for Australia for 1950 were also classified according to the detailed classification of

the Fifth Revision, on the joint cause rules current for that revision. A complete detailed classification according to both the Fifth and Sixth Revisions was shown in *Demography*, Bulletin No. 68. Commencing with 1951, the classification is according to the Sixth Revision only and for 1958, the Seventh Revision was used. Except in a few instances comparability was maintained with the introduction of the Seventh Revision. *Demography*, Bulletin No. 76, 1958, indicates the few instances in which comparability was affected by the use of the Seventh Revision.

In order to facilitate the concise presentation of cause of death statistics, the present International Classification provides two special lists of causes for tabulation—The Intermediate List of 150 causes and the Abbreviated List of 50 causes. The latter has been used as the base of the cause of death tabulations A to C which follow. Some categories have been sub-divided to show additional particulars of interest in Australian statistics. Tables A and B show deaths of males and females in age groups, respectively, for 1958 and Table C shows the total numbers of males and females who died and the death rates per million of mean population and percentage of total deaths for 1958.

11. **Deaths from Principal Causes.**—(i) *General.* In the preceding tables, particulars have been given for each of the causes of death comprising the Abbreviated Classification according to the Seventh Revision of the International List. Certain important causes are treated in detail hereunder. The Abbreviated Classification numbers used in tables A to C (pp. 363–6) are indicated in parentheses for each cause or group of causes.

(ii) *All Forms of Tuberculosis (B1, B2).* (a) *General.* The total number of deaths classified to all forms of tuberculosis in 1958 was 538, consisting of 405 males and 133 females. In comparing any of the figures for 1950 and subsequent years with those for 1949 and earlier years, consideration should be given to the effect of the change in basis from the Fifth to the Sixth Revision of the International List. This was discussed in Official Year Book No. 39, page 626.

(b) *Age at Death.* The following table shows the age groups of males and females who were classified as dying from tuberculosis in 1958, together with figures for 1921, 1931, 1941 and 1951.

TUBERCULOSIS (ALL FORMS): DEATHS IN AGE GROUPS, AUSTRALIA.

Age Group (Years).	Males.					Females.				
	1921.	1931.	1941.	1951.	1958.	1921.	1931.	1941.	1951.	1958.
0–14	143	90	63	23	5	128	81	54	35	4
15–29	477	294	162	46	9	540	487	275	68	8

45–64	692	674	793	570	195	278	252	251	126	50
65 and over ..	138	193	279	306	164	56	89	110	86	38
Not stated ..	3	1	..
Total ..	2,171	1,836	1,725	1,080	405	1,516	1,331	1,009	458	133

(c) *Death Rates.* The reduction in mortality from tuberculosis is shown by the decline in the crude death rate from tubercular diseases, which fell from 68 per 100,000 of mean population in 1921 (males, 78; females, 56) to 18 in 1951 (males, 25; females, 11) and still further to 5 in 1958 (males, 8; females, 3). The crude death rate does not reveal the even more striking fall in the number of deaths in the younger age groups, which can be seen from the table above.

(d) *Death Rates, Various Countries.* A comparison of the death rates from tuberculosis for Australia with those for various other countries, made on the latest figures available, shows that Australia, with a rate of 5 deaths per 100,000 of mean population, occupies a favourable position as regards this disease. Whereas the rate for Denmark and Netherlands is only 5, rates range as high as 58 for Portugal. For various other countries rates are as follows:—Canada, 7; New Zealand, 11; Union of South Africa and United States of America, 8; United Kingdom, 11; Switzerland, 18; Italy, 21; France, 27; Finland, 38; and Japan, 47.

(iii) *Malignant Neoplasms, including Neoplasms of Lymphatic and Haematopoietic Tissues (B18).* (a) *General.* It was shown in Official Year Book No. 39, page 628, that deaths classified under this heading according to the Sixth Revision of the International List are not directly comparable in total with those on the Fifth Revision basis and comparability ratios were given to enable comparison to be made on an adjusted basis. This change must be kept in mind in considering the comparisons shown in the following pages.

(b) *Type and Seat of Disease.* Tables showing the type and seat of disease in conjunction with age and conjugal condition of the persons dying from malignant neoplasms in 1958 will be found in *Demography*, Bulletin No. 76. A summary regarding type and seat of disease for 1958 is given below. It may be pointed out that the significance of the number of deaths shown for the various types of neoplasms enumerated hereunder is doubtful, owing to the fact that, in the absence of a post-mortem, it is impracticable in the majority of cases for the certifying doctor to make an accurate diagnosis as to type in the detail required for the following classification.

DEATHS FROM MALIGNANT NEOPLASMS AND NEOPLASMS OF LYMPHATIC AND HAEMATOPOIETIC TISSUES: TYPE AND SEAT OF DISEASE, AUSTRALIA, 1958.

(c) *Age at Death.* The ages of males and females who died from malignant neoplasms in 1958 are given below, together with figures for 1921, 1931, 1941 and 1951. The increase in the number of deaths from malignant neoplasms in the years since 1921 is due principally to the increase in the number of people in the higher age groups, at which ages the risks of cancer are much greater. While the total population increased by about 80 per cent. between 1921 and 1958 the number of people over 55 years of age increased by about 161 per cent. The increase in the number of deaths in the lower age groups from 1951 is partly due to the inclusion of neoplasms of lymphatic and haematopoietic tissues, also it is probable that a proportion of the increased number of deaths from cancer recorded in recent years has been due to improved diagnosis and certification on the part of the medical profession.

(a) Includes neoplasms of lymphatic and haematopoietic tissues.

(d) *Death Rates.* The death rates from malignant neoplasms have continued to rise over recent years. The rates are crude death rates representing the number of deaths from malignant neoplasms per 100,000 of mean population and do not take account of changes in the age constitution of the population, and to a substantial extent reflect the increasing age of the population rather than the true change in mortality from malignant neoplasms (see previous paragraph). In 1921, the rate for Australia was 87 (males, 88; females, 87); in 1931 it was 101 (males, 105; females, 97); in 1941 it was 119 (males, 119; females, 120) and in 1951 it had risen to 126 (males, 130; females, 122). Figures for 1958 gave a rate of 128 (males, 137; females, 119).

(e) *Death Rates, Various Countries.* Death rates from malignant neoplasms per 100,000 of mean population for Australia and for various other countries are as follows:—Portugal, 86; Japan, 91; Australia, 128; Canada, 129; Union of South Africa, 131; Italy, 136; New Zealand and United States of America, 150; Finland, 153; Netherlands, 159; France, 190; Switzerland, 191, and United Kingdom, 209. The rates are for the latest available year in each case.

(iv) *Diseases of the Heart (B25 to B28).* The number of deaths classified to diseases of the heart in 1958 was 28,704 (16,797 males and 11,907 females). This class is the largest amongst causes of death, the rate having increased from 112 per 100,000 of mean population in 1911–15 to 291 in 1958. The increase in the number of deaths recorded from heart diseases has been particularly pronounced during the past twenty years. The rapid increase in mortality is partly a reflection of the ageing of the population, but the figures have been influenced mainly by improved diagnosis and certification by medical practitioners.

The death rates for heart diseases for various years from 1921 were as follows:—1921, 93 (males, 102; females, 83); 1931, 159 (males, 178; females, 142); 1941, 269 (males 306; females, 231); 1951, 314 (males, 367; females, 259); and 1958, 292 (males, 337; females, 245). Deaths from heart diseases in 1958 represented 34 per cent. of the total deaths.

(v) *Puerperal Causes (B40).* It was shown in Official Year Book No. 39, page 634 that the changes introduced with the Sixth Revision of the International List did not significantly affect the comparability of the total number of deaths from puerperal causes. The Seventh Revision, introduced in 1958, did not affect comparability. The death rate from these causes (including criminal abortion) has fallen rapidly during recent years and in 1958 the rate was 0.5 per 1,000 live births, compared with a rate of 6 per 1,000 in 1936. The 111 deaths in 1958 correspond to a death rate of 2.3 per 100,000 females. The death rate may be expressed in other terms by stating that 1 of every 1,981 women giving birth to a live child in 1958 died from puerperal causes; the corresponding ratios for married women were 1 in every 2,038 and for single women 1 in every 1,253.

The death rate per 1,000 live births from puerperal causes in various countries for the latest available years is as follows:—New Zealand, Denmark and the United States of America, 0.4; United Kingdom, Canada and Australia, 0.5; France and the Netherlands, 0.6; Switzerland, 0.8; Finland, 0.9; Italy, 1.1; and Japan, 1.7.

The total number of children left by the 103 married mothers who died from puerperal causes in 1958 was 327, an average of 3.2 children per mother.

Five of the mothers who died had been married less than one year, 5 between one and two years, and 4 between two and three years. The duration of marriage ranged up to 24 years. Tabulations distinguishing the ages at marriage and at death will be found in *Demography*, Bulletin No. 76, which also includes a table showing in combination the duration of marriage and previous issue.

(vi) *Congenital Malformations and Diseases of Early Infancy (B41 to B44).* This combined group embraces two complete classes of the International List of Causes of Death which relate more specifically to infant deaths and they have already been presented in detail in the section devoted to causes of infant death (see pp. 359 and 360).

(vii) *Accidents, Poisonings and Violence (BE 47 to BE 50).* (a) *General.* Deaths in this class are classified according to external cause and not according to nature of injury. The classification provides sub-groups for accidents, including adverse reactions to prophylactic inoculations, therapeutic misadventures and late effects of accidental injury; suicide; homicide and injuries purposely inflicted by other persons; and injury resulting from operations of war, including late effects.

The following table, showing the death rates in the main sub-groups per 100,000 of mean population, indicates that the death rate from violence is generally about three times as great for males as for females. It can be seen also that in 1958 the proportion of deaths caused by violence was 7.69 per cent., compared with 6.76 per cent. in 1931–35.

The low level of the rates and proportions for the years 1941–45 is due largely to the exclusion of deaths of defence personnel from accidents, suicide and homicide, though the rates have been based on total mean population (including defence personnel). A further contributing factor is the decrease during this period in the number of automobile accidents. From July, 1947, deaths of defence personnel from accidents, etc., have again been included.

ACCIDENTS, POISONINGS AND VIOLENCE: DEATH RATES.(a)

Period.	Death Rate(a) from—												All Violence. Proportion per 10,000 Deaths.

1958 ..	73	30	51	18	6	12	2	1	2	93	37	65	988	489	769

(a) Number of deaths per 100,000 of mean population.

(b) Includes "open verdict."

(c) Includes late effects of injuries due to operations of war.

(b) *Accidents* (BE 47, BE 48). In 1958, the total number of deaths from accidental causes was 5,075 (3,643 males and 1,432 females). Half of the accidental deaths were the result of transport accidents. Of these, the numbers attributable to the major causes, and the percentages of the total accidental deaths in each case, were as follows:—Motor vehicle traffic accidents, 2,228 (43.90 per cent.); motor vehicle non-traffic accidents, 103 (2.03 per cent.); other road vehicle accidents, 81 (1.60 per cent.); railway accidents, 111 (2.19 per cent.); water transport accidents, 69 (1.36 per cent.); aircraft accidents, 29 (0.57 per cent.); a total of 2,621 (51.65 per cent.). Other important causes were accidental falls, 954 (18.80 per cent.); accidental drowning, 420 (8.28 per cent.); and accidents caused by fire and explosion of combustible material, 177 (3.49 per cent.).

(c) *Suicide* (BE 49). (i) *Modes Adopted*. Deaths from suicide in 1958 numbered 1,207 (males, 910; females, 297). Firearms and explosives were used in 337 cases (27.92 per cent. of total deaths by suicide). Other important modes adopted, together with the numbers and relevant percentages, were as follows:—Poisoning other than by gases, 274 (22.70 per cent.); poisoning by gases, 208 (17.23 per cent.); hanging or strangulation, 207 (17.15 per cent.); submersion (drowning), 65 (5.39 per cent.); other modes, 116 (9.61 per cent.).

Of the 910 males who committed suicide, 319 (35.05 per cent.) used firearms or explosives. For females the most common mode was poisoning (other than by gases). This was used in 115 cases (38.72 per cent.).

(ii) *Age at Death*. From the following table, which shows the age of persons who committed suicide in 1958, it will be seen that both young and very old people took their lives during this year.

AGE OF PERSONS WHO COMMITTED SUICIDE: AUSTRALIA, 1958.

				Total Deaths ..	910	297	1,207

(d) *Homicide and Operations of War (BE 50).* Of the 157 deaths recorded in 1958, there were 150 deaths from homicide and injury purposely inflicted by other persons (not in war), of which assault by firearms and explosives caused 54; assault by cutting and piercing instruments 34, assault by other means 61 and execution 1. Deaths from injury resulting from the operations of war numbered 7 but all were deaths from late effects of such injuries.

12. *Age at Death and Average Issue of Deceased Married Males and Females.*—*Demography*, Bulletin No. 76, contains a number of tables showing, in combination with the issue, the age at marriage, age at death and occupation of married (including widowed or divorced) persons who died in Australia in 1958. Deaths of married males in 1958 numbered 35,430, and of married females, 28,945. The tables which follow deal, however, with only 34,811 males and 28,684 females, the information regarding issue in the remaining 880 cases being incomplete. The total number of children in the families of the 34,811 males was 107,408 and of the 28,684 females, 95,565. The average number of children is shown for various age groups in the following table.

AGE AT DEATH AND AVERAGE ISSUE OF DECEASED MARRIED (a) MALES AND FEMALES: AUSTRALIA.

§ 6. Vital Statistics of External Territories.

Because of the outbreak of hostilities in the Pacific during the 1939-45 War, civil administration in the external territories was suspended on 11th February, 1942, and registration of births, deaths and marriages was not resumed until 1946. The following table for the year 1958, shows the number of marriages, births and deaths registered in the external territories under the control of Australia, namely:—Norfolk Island; Papua; the Trust Territory of New Guinea; and the Trust Territory of Nauru. More detailed information will be found in a series of tables in *Demography*, Bulletin No. 76.

VITAL STATISTICS: EXTERNAL TERRITORIES, 1958.

NOTE.—Information for Cocos (Keeling) and Christmas Islands is not available.

CHAPTER XI.

HOUSING AND OTHER NEW BUILDING.

§ 1. Introduction.

1. **General.**—In issues of the Official Year Book prior to No. 43, certain information relating to the housing of the population was included in various chapters, but for a more convenient presentation of the material this complete chapter, which presents a summary of all available information on the subject, has been substituted.

In section 2 of this chapter details are given of the characteristics of dwellings as obtained from censuses. Section 3 outlines government assistance to housing since 1945 and operations under the War Service Homes Act 1918–1956. A statistical summary of new building is provided in section 4.

§ 2. Census Dwellings.

1. **General.**—At each census, in addition to the questions relating to the personal particulars of the individual members of households, there have been a number of important questions on the Census Schedule designed to elicit information concerning the dwellings in which the population was housed at the date of the census. For the purpose of the census, a “dwelling” is any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term has therefore a very wide reference, and includes, *in addition to houses and flats*, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution.

2. **Number of Dwellings.**—(i) *Censuses 1911 to 1954.* The following table shows the number of occupied and unoccupied dwellings in Australia at each Census from 1911 to 1954. Occupied dwellings are classified into private and other dwellings. Dwellings other than private include hotels, boarding houses, lodging houses, hostels, hospitals, educational, religious and charitable institutions, defence and penal establishments, etc. The term “unoccupied dwellings” is not synonymous with vacant houses and flats available for occupancy, but refers mainly to “week-end”, holiday and other dwellings whose usual occupants were temporarily absent on the night of the Census; newly-completed dwellings awaiting occupancy are also included.

DWELLINGS: AUSTRALIA, CENSUSES 1911 TO 1954.

(Excluding Dwellings occupied solely by Full-blood Aborigines.)

Census.	Occupied.			Unoccupied.
	Private.	Other than Private.	Total.	
1911	894,389	29,070	923,459	33,473
1921	1,107,010	46,275	1,153,285	51,163
1933	1,509,671	37,705	1,547,376	68,772
1947	1,873,623	34,272	1,907,895	47,041
1954	2,343,421	36,932	2,380,353	112,594

(ii) *Census, 1954.* The following table shows the number of occupied and unoccupied dwellings in the urban and rural areas of Australia at the Census of 30th June, 1954. (For definitions of "urban" and "rural" see para. 4, p. 287.) As explained therein, the boundaries of the Metropolitan Urban and other divisions of State differ from census to census, and consequently accurate comparison cannot be made between figures for corresponding divisions. Moreover, the inclusion in the Other Urban Division in 1954 of the larger towns not separately incorporated has further reduced comparability. These factors should be borne in mind when referring to tables in this section showing divisions of State.

Occupied dwellings are classified into private and other dwellings (see para. 3, p. 375, for definitions of "private" and "other" dwellings). The term "unoccupied dwellings" is not synonymous with vacant houses and flats available for occupancy, but refers mainly to "week-end", holiday and other dwellings whose usual occupants were temporarily absent on the night of the Census; newly-completed dwellings awaiting occupancy are also included.

The total number of occupied dwellings in Australia at the Census of 30th June, 1954, showed an increase of 24.8 per cent. over the corresponding figure for the 1947 Census, compared with an increase of 18.6 per cent. in population. Occupied private dwellings increased by 25.1 per cent. and occupied dwellings other than private by 7.8 per cent. At the 1954 Census, 98.4 per cent. of the total occupied dwellings in Australia were private dwellings, compared with 98.2 per cent. in 1947. Proportional increases in total occupied dwellings over 1947 figures in each State and Territory were:—New South Wales 22.3 per cent., Victoria 25.3 per cent., Queensland 24.7 per cent., South Australia 27.7 per cent., Western Australia 30.5 per cent., Tasmania 26.1 per cent., Australian Capital Territory 96.9 per cent., and Northern Territory 27.1 per cent.

Unoccupied dwellings increased by 139 per cent.

DWELLINGS: AUSTRALIA, CENSUS, 30th JUNE, 1954.

(EXCLUDING DWELLINGS OCCUPIED SOLELY BY FULL-BLOOD ABORIGINALS.)

Division.	Occupied.				Unoccupied.	
	Private.	Other than Private.	Total.		Number.	Proportion of Total. (Per Cent.)
			Number.	Proportion of Total. (Per Cent.)

Australian Capital Territory	3,615	52	7,118	326
Australia	1,907,895	47,041	2,380,353	112,594

The numbers of occupied dwellings in the External Territories at the 1954 Census were as follows:—Norfolk Island, 310; Papua, 1,605; Trust Territory of New Guinea, 3,098; Trust Territory of Nauru, 99.

3. Class of Dwelling.—The following table shows the number of the various classes of occupied dwellings in the Metropolitan Urban, Other Urban and Rural Areas of Australia at the Censuses of 1947 and 1954. Definitions of the several classes of dwellings are as follows:—

Private dwellings comprise private houses (including sheds, huts, garages, &c., used for dwelling purposes), shares of private houses, flats and rooms, apartments, etc. In previous censuses, dwellings returned on the Schedules as sheds, huts, garages, etc. were included with private houses. For the Census of 1954, particulars of these dwellings were tabulated separately, but have been included with private houses to preserve continuity with past census results. Separate particulars were shown in the 1947 Census publications for private houses which were shared by two or more family units and for which only one Householder's Schedule was received, but in 1954 these dwellings were included with private houses.

Share of private house is a portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was furnished.

Flat is part of a house or other building which can be completely closed off and which includes both cooking and bathing facilities.

Other private dwelling is an apartment, room(s), etc., which is part of a building, but which is not a self-contained unit.

Dwellings other than private include hotels, boarding houses, lodging houses, hostels, hospitals, educational, religious and charitable institutions, defence and penal establishments, etc.

It is desirable, when considering the question of housing, to exclude those forms of accommodation which do not represent the normal housing conditions associated with family life, and the statistics which follow relate mainly to private dwellings only.

OCCUPIED DWELLINGS ACCORDING TO CLASS, AUSTRALIA, 1947 AND 1954.

(c) Portion of a shared private house which was occupied separately and for which portion a separate Householder's Schedule was received.

NOTE.—Minus sign. (—) denotes decrease.

4. Population According to Class of Dwelling, etc.—The following table shows the number of the various classes of occupied dwellings at the Censuses of 1947 and 1954, together with the number of inmates therein.

Of the total population in 1954, 92.52 per cent. were living in private dwellings—houses, flats, apartments, rooms, etc.—whilst 672,168 persons, or 7.48 per cent. of the population, spent the night in other than private dwellings, or on ships, trains or aircraft or were camping out.

(b) Portion of a shared private house which was occupied separately and for which portion a separate Householder's Schedule was received.

(c) Shipping, railway and air travellers.

5. Occupied Private Dwellings.—(i) *Material of Outer Walls.* In the following table, occupied private dwellings are classified according to the material of which the outer walls were built.

Wood has been the most extensively used material in the construction of the outer walls, followed by brick and fibro cement, and in 1954 the respective proportions for Australia for occupied private dwellings for which the material of the outer walls was specified were—wood, 44.4 per cent., brick, 33.5 per cent. and fibro cement, 12.7 per cent. The latter has shown a most spectacular increase since 1933, when the proportion was 1.6 per cent. (23,696 dwellings), compared with 6.3 per cent. in 1947 (117,631 dwellings). The proportions of both brick and wooden dwellings have shown small decreases since 1947. The numbers of dwellings of all other materials except fibro cement and concrete have decreased. Brick dwellings in 1954 represented 51.5 per cent. of all occupied private dwellings in the Metropolitan Urban Divisions, whilst in the Other Urban and Rural Divisions wooden dwellings predominated, the percentages of such dwellings being 60.0 per cent. and 59.4 per cent. respectively.

OCCUPIED PRIVATE DWELLINGS CLASSIFIED ACCORDING TO MATERIAL OF OUTER WALLS, AUSTRALIA, 1947 AND 1954.

(EXCLUDING DWELLINGS OCCUPIED SOLELY BY FULL-BLOOD ABORIGINALS.)

(a) See letterpress on p. 287 regarding comparability as between Censuses.

NOTE.—Minus sign (—) denotes decrease.

(ii) *Number of Rooms.* For Census purposes, the kitchen and any permanently enclosed sleep-out were included in the number of rooms in the dwelling, but the bathroom, pantry, laundry and storehouse were excluded unless generally used for sleeping.

Excluding houses with rooms unspecified, private houses of four, five and six rooms represented 78.3 per cent. of the total number of private houses in Australia at 30th June, 1954, compared with 79.2 per cent. in 1947, and three-quarters of the total increase in the number of private houses since 1947 consisted of houses containing these numbers of rooms. Houses of seven and more rooms also showed substantial increases.

(a) Includes kitchen and permanently enclosed sleep-out but does not include bathroom, pantry, laundry or storehouse, unless generally used for sleeping. (b) Includes houses, sheds, huts, etc., and shared private houses for which only one Householder's Schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was received. (d) See letterpress on p. 287 regarding comparability as between Censuses.

(iii) *Number of Inmates.* A classification of occupied private dwellings according to the number of inmates is shown in the following table.

For Australia as a whole, private houses with four inmates were most numerous, followed very closely by those with two and three inmates in that order.

An increase of nearly 51 per cent. (149,348 houses) in the number of private houses occupied by two inmates brought this group from third position in 1947 to second position in 1954. Houses with two inmates in 1954 constituted 22 per cent. of the total number of occupied private houses in Australia, about the same proportion as for houses with four inmates. In 1947, houses with two inmates constituted 18 per cent. of the total and houses with four inmates 21 per cent. Houses with three inmates constituted 21 per cent. at both the 1947 and 1954 Censuses. The average number of inmates in private houses was 3.69 in 1954, compared with 3.91 in 1947.

The number of private houses which were shared, and for each share of which a separate Householder's Schedule was furnished, increased slightly between 1947 and 1954, but the average number of inmates therein decreased from 2.87 to 2.71. Separate particulars of shared houses for which only one Householder's Schedule was furnished were not compiled in 1954. These particulars are included with private houses in all tables in this section.

Flats and other classes of private dwellings increased in both numbers and total inmates, but the average number of inmates fell from 2.84 to 2.58 for flats and from 2.18 to 2.11 for others.

In flats those with two inmates and in other classes of occupied private dwellings those with one inmate predominated.

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one Householder's Schedule was received.

(b) Portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was received.

(c) See letterpress on p. 287 regarding comparability as between Censuses.

(iv) *Nature of Occupancy.* At the 1954 Census, 52.5 per cent. of occupied private houses in Australia, for which particulars were supplied, were occupied by owners, 16.8 per cent. by purchasers by instalments, 28.1 per cent. by tenants, and 2.6 per cent. by others. The corresponding percentages in 1947 were—owners, 50.5 per cent; purchasers by instalments, 9.0 per cent; tenants, 37.6 per cent; and others, 2.9 per cent. Owner-occupied houses in Australia increased by 33.4 per cent. between 1947 and 1954, and those being purchased by instalments by 139.3 per cent., the increase in these two groups combined being nearly 50 per cent., while tenant-occupied houses decreased by 4.1 per cent.

In the Metropolitan Areas, 70.5 per cent. of all occupied private houses for which particulars were supplied were either owner-occupied or being purchased by instalments, as compared with 69.0 per cent. in the Other Urban areas, and 66.9 per cent. in the Rural Areas.

Tenants occupied by far the greater proportion of flats and other private dwellings.

OCCUPIED PRIVATE DWELLINGS CLASSIFIED ACCORDING TO NATURE OF OCCUPANCY, AUSTRALIA, 1947 AND 1954.

(EXCLUDING DWELLINGS OCCUPIED SOLELY BY FULL-BLOOD ABORIGINALS.)

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one Householder's Schedule was received. (b) Portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was received. (c) See letterpress on p. 287 regarding comparability as between Censuses. (d) These figures were compiled from the answers furnished in response to the instruction on the Householder's Schedule "Tenant paying rent to a Government Authority to write 'Tenant (G)'".

(v) *Weekly Rent.* (a) *All Tenanted Private Dwellings.* The following table shows tenanted private dwellings in the Metropolitan Urban, Other Urban and Rural Areas of Australia classified according to weekly rent (unfurnished).

Information tabulated concerning rents was restricted to the actual rent paid per week by tenants for unfurnished private dwellings. Particulars of rents shown in the following tables are therefore on an *unfurnished* basis. Dwellings shown as rent "Not Stated" include those whose rents were shown on Householders' Schedules on a *furnished* basis, and those whose rents were not applicable (e.g., for shop and dwelling combined). In this section information on "tenanted private dwellings" relating to the 1954 Census *excludes particulars of dwellings occupied by "Tenants" (Governmental Housing) in each State*, i.e., those who furnished answers in response to the instruction on the Census Householder's Schedule "Tenant paying rent to a Government Authority to write 'Tenant (G)'". For the Australian Capital Territory and the Northern Territory, particulars of all tenanted private dwellings are included. Particulars for the 1947 Census relate throughout to all tenanted private dwellings.

TENANTED PRIVATE DWELLINGS CLASSIFIED ACCORDING TO WEEKLY RENT (UNFURNISHED), AUSTRALIA, 1947 AND 1954.

Average Weekly Rent (Unfurnished) per Private Dwelling ..	22s. 8d.	22s. 0d.	36s. 7d.	24s. 2d.	32s. 2d.	34s. 2d.	50s. 6d.	36s. 2d.	35s. 0d.

(a) The figures shown for 1954 exclude dwellings occupied by "Tenants" (Governmental Housing), except those in the Northern Territory and the Australian Capital Territory. (b) Includes houses, sheds, huts, etc., and shared private houses for which only one Householder's Schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate Householder's Schedule was received. (d) Includes "other private dwellings" not shown in the table. (e) See letterpress on p. 287 regarding comparability as between Censuses.

At the 1947 Census, nearly 83 per cent. of the tenanted private houses in Australia shown in the table above had weekly rentals of between 10s. and 35s.; at the 1954 Census, only 61 per cent. were within these limits. In 1947, 6 per cent. had rentals below 10s. and 11 per cent. above 35s. In 1954, 3 per cent. had rentals below 10s. and 36 per cent. above 35s. At the 1947 Census, 88 per cent. of the flats shown for Australia had rentals of between £1 and £3 a week, 5 per cent. were below this range, and 7 per cent. above it. At the 1954 Census, the corresponding proportions were:—74 per cent., 2 per cent. and 24 per cent. Dwellings whose rents were not stated were excluded in obtaining these proportions.

The average rentals shown in this table for all tenanted private dwellings in Australia at the 1954 Census were 45 per cent. higher than in 1947 (42 per cent. higher for houses and 38 per cent. higher for flats). Metropolitan rentals in 1954 were higher by 40 per cent., 35 per cent. and 38 per cent., respectively, than in 1947.

In all such comparisons as these, the difference in basis between the 1947 and 1954 Censuses, referred to in the opening paragraph above, and also the differences in the Urban and Rural divisions (*see* p. 287), should be borne in mind.

(b) *Tenanted Private Houses of Three to Six Rooms.* The comparisons in the following table, restricted to houses of three to six rooms, with outside walls of wood, brick or stone, are of particular interest, since this group comprises more than three-quarters of all tenanted private houses in Australia.

AVERAGE WEEKLY RENT(a) PER ROOM OF TENANTED PRIVATE HOUSES, THREE TO SIX ROOMS, WITH WALLS OF WOOD, BRICK OR STONE, AUSTRALIA, 1947 AND 1954.

(EXCLUDING DWELLINGS OCCUPIED SOLELY BY FULL-BLOOD ABORIGINALS.)

(a) Rents relate to tenanted private houses (one family) in 1947 and to tenanted private houses, excluding those occupied by "Tenants" (Governmental Housing) in each State, in 1954.

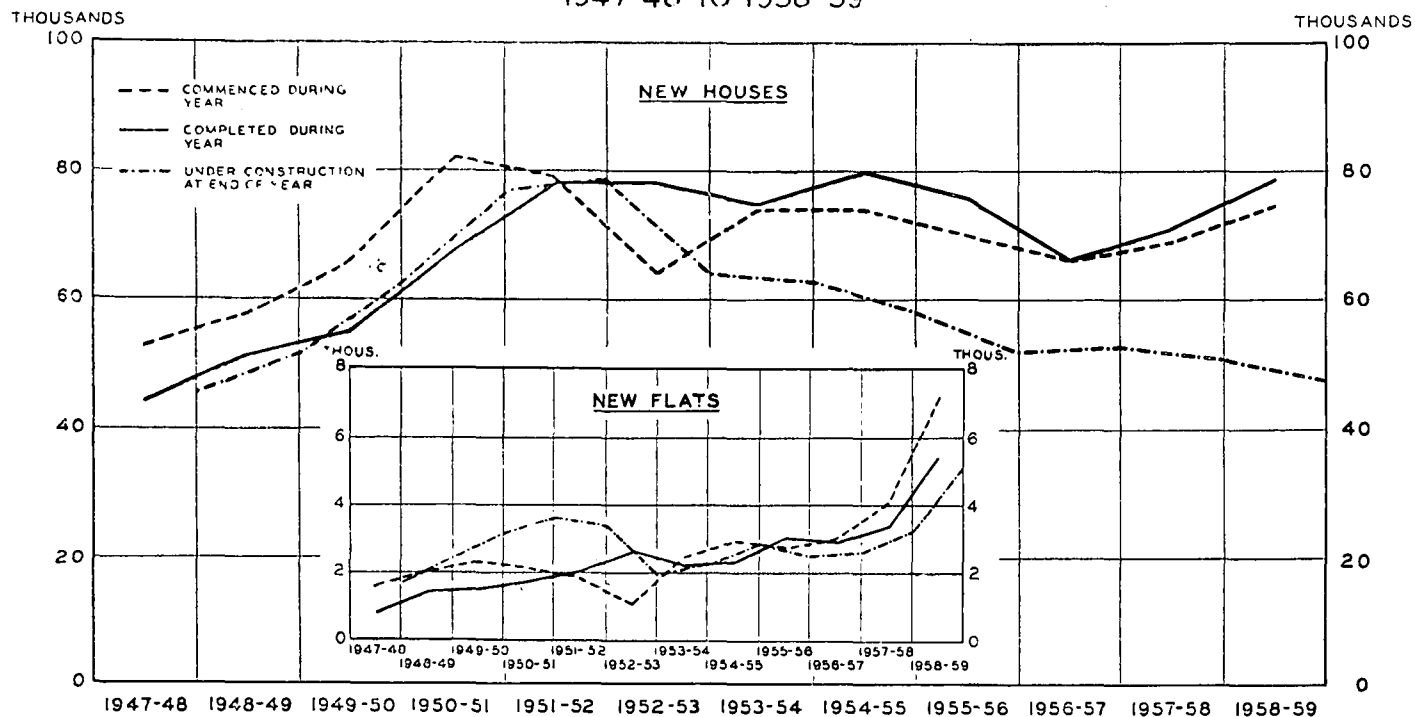

The average rent of 3- to 6-roomed tenanted private houses of wood, brick or stone increased by about 40 per cent. between 1947 and 1954 (wood by 46 per cent. and brick by 34 per cent.). The average for 3-roomed tenanted houses of wood, brick or stone increased by about 53 per cent., 4-roomed houses by about 42 per cent., 5-roomed houses by about 39 per cent., and 6-roomed houses by 33 per cent. The increases in respect of houses of wood were higher than those for brick or stone in each case. The increases in the Metropolitan Areas were relatively lower than for Australia as a whole.

(vi) *Date of Building.* The numbers of occupied private dwellings in Australia at the Census of 30th June, 1954, classified according to date of building, were as follows:—Built before 30th June, 1947, 1,758,448; 1st July–31st December, 1947, 19,742; 1948, 60,360; 1949, 63,897; 1950, 78,965; 1951, 85,852; 1952, 91,712; 1953, 88,467; 1954, 44,725; built after 30th June, 1947 but particular year not stated, 19,641; not stated, 31,612; total, 2,343,421.

(vii) *Facilities, etc.* At the 1947 Census, a detailed question was asked concerning facilities, and a summary of the information obtained therefrom was published on page 571 of Official Year Book No. 38. The question asked at the 1954 Census was much less detailed, and was designed partly to clarify replies to the question on class of dwelling. Information obtained in reply to this question and to that on farm dwellings in 1954 was not compiled.

NEW HOUSES AND FLATS : AUSTRALIA

1947-48 TO 1958-59

§ 3. Government Assistance to Housing Since 1945.

1. **Agreements between the Commonwealth and State Governments.**—(i) *The 1945 Agreement.* In November, 1945, the Commonwealth Government entered into an agreement with the Governments of the States whereby the Commonwealth Government would provide finance for, and the State Governments would undertake the building of, housing projects. Tasmania withdrew from the Agreement in August, 1950 and South Australia did not begin to operate under it until July, 1953. The Agreement expired on 30th June, 1956. Features of the 1945 Commonwealth and State Housing Agreement were:—

- (a) The Commonwealth Government agreed to advance to each participating State the amount expended for the construction of housing projects between 3rd December, 1943, and the date of the Agreement, and the amount required for the State's housing projects during a further period of ten years.
- (b) Each advance of money was to be repaid with interest thereon in equal annual instalments within a maximum period of 53 years from the date the advance was made, the interest to be at a rate not exceeding that payable in respect of the latest Commonwealth loan at the date of the advance.
- (c) Rents charged were to be economic rents, i.e., the rents were to be sufficient to meet repayments by the State to the Commonwealth of the capital cost of each dwelling with interest and of current outgoings such as the cost of maintenance, administration, rates and taxes and insurance.
- (d) The rental provisions of the Agreement provided for a system of rental rebates, whose basic principle was that a family with an income at the basic wage level did not need to pay more than one-fifth of its income in rent, regardless of the economic rent of the dwelling.
- (e) The Commonwealth Government was to bear three-fifths, and the State concerned two-fifths, of all cash losses sustained by the States, on an annual basis.

The following table shows the amount of money advanced to each State under the 1945 Agreement:—

1945 COMMONWEALTH AND STATE HOUSING AGREEMENT: ADVANCES TO STATES.

Total ..	37,718	30,877	9,456	4,904	12,073	1,130	96,158

(a) Includes flats.

Initially, houses constructed under the 1945 Commonwealth and State Housing Agreement could be sold to tenants, provided the tenant was able to arrange payment of the full purchase price of the house to the State Authority immediately on sale. Under this arrangement sales to tenants were relatively few. In April, 1955, the Commonwealth and the States entered into a supplementary agreement whereby the State Governments were permitted to sell houses to tenants on terms. These were:—deposit, 5 per cent. of the first £2,000 and 10 per cent. of the balance of the purchase price of the house, the maximum amount of the remaining balance being limited to £2,750 and repayment of the balance to be made over a maximum period of 45 years at an interest rate of 4½ per cent. a year. Tenants eligible under the War Service Homes Act were entitled to purchase houses built under the Agreement on the terms provided in that Act. The number of houses sold under the Agreement is as follows:—

1945 COMMONWEALTH AND STATE HOUSING AGREEMENT: HOUSES SOLD.

Year.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Total.(a)

(a) Tasmania did not operate under the 1945 Agreement after August, 1950.

(ii) *The 1956 Agreement.* In 1956, the Commonwealth and the States entered into a new agreement, under which added emphasis was placed on the construction of homes for private ownership. Features of the agreement are:—

- (a) The Commonwealth Government is providing finance to the States over a period of five years ending 30th June, 1961, for the erection of housing projects.
- (b) For the first two years of the agreement, 20 per cent. of the money allocated to each State was advanced to building societies and other approved institutions for lending to private house builders. During the remaining three years of the agreement this proportion is 30 per cent.
- (c) The remaining 70 per cent. (first two years, 80 per cent.) of the allocation to each State may be used by the States for the erection of houses for either rental or sale. The States determine the type of houses to be erected, their location and the selection of tenants. They also fix the terms of selling.
- (d) The Commonwealth may specify that a portion, not exceeding 5 per cent., in any one year, of the moneys referred to in (c) above, be set aside for the erection of houses for serving members of the defence forces nominated by the Commonwealth. The Commonwealth provides supplementary advances to the States equal to the amounts set aside by them for this purpose.
- (e) Each advance of money and interest thereon is to be repaid in equal annual instalments over a period of 53 years from the date each advance is made. The rate of interest chargeable on advances is the long term bond rate, less three quarters of one per cent. when the bond rate does not exceed 4½ per cent. per annum, and, less one per cent. when the bond rate exceeds 4½ per cent. per annum. The effective interest rate during the first three financial years of this agreement (1956–57 to 1958–59) was 4 per cent. per annum, i.e., 5 per cent. less one per cent.

The following table shows progress made under the 1956 Housing Agreement during 1958–59:—

1956 COMMONWEALTH AND STATE HOUSING AGREEMENT: SUMMARY.

(a) Includes Service Housing. (b) Fifty per cent. by Commonwealth and 50 per cent. by State.
(c) Included in State Housing Programme above. (d) Includes dwellings purchased which have been completed during 1958–59.

2. **Imported Houses.**—With the object of supplementing the number of houses being constructed by the building industry within Australia, the Commonwealth Government in 1950 sponsored a plan to import prefabricated houses from overseas. Under the States Grants (Imported Houses) Act 1950, the Commonwealth undertook to pay a subsidy not exceeding £300 per house to assist approved State Housing Authorities to meet the cost of houses brought to Australia from overseas.

Under this plan, the Commonwealth paid subsidy on 13,979 houses imported by State Authorities. Of these, 7,613 units were erected under the 1945 Commonwealth and State Housing Agreement on behalf of the State Governments themselves, whilst other houses were erected for governmental authorities concerned with public utilities such as the generation of electricity, railways and water supply.

A total of 4,167 houses, imported by the Commonwealth Government, were erected by the Department of Works and the Snowy Mountains Hydro-Electric Authority.

Of the 18,182 houses, imported and erected the United Kingdom supplied slightly more than half, with France, Austria and Sweden the next largest suppliers in that order.

Expenditure by the Commonwealth Government on subsidies to the States importing houses under this plan was as follows: New South Wales, £252,000; Victoria, £1,645,200; Queensland, £703,800; South Australia, £1,173,000; Western Australia, £419,700; Total, £4,193,700. Imports of houses under this scheme ceased in January, 1954.

3. **Housing Schemes in Commonwealth Territories.**—(i) *Northern Territory.* In 1946, control of all Government-owned residences in the Territory (excluding those belonging to the Defence Services, Commonwealth Railways or attached to post offices) was vested in the Administration. The Administration provides houses for rental to Commonwealth employees.

- (a) In 1953, a Housing Scheme was inaugurated under which potential house builders may obtain loans of up to £2,750 for the erection of houses, the purchase or extension of existing houses or the discharge of mortgages on houses. Up to 31st August, 1959, 452 loans had been approved. These were for:—new houses, 333; extensions to existing houses and/or discharge of mortgages, 37; purchase of existing houses, 82.
- (b) In January, 1959, an Ordinance was passed to set up a Housing Commission to construct houses for letting at an economic rental to low income groups.
- (c) The Administration is prepared to sell to its tenants the houses they occupy for cash or on terms with a minimum deposit of 5 per cent. of the first £2,000, and 10 per cent. of the balance. The maximum advance by mortgage is £2,750. Repayment is over a maximum of 45 years, and interest is at present 4½ per cent.

(ii) *Australian Capital Territory.* The Commonwealth Government provides houses primarily for rental to employees of Government organizations and to persons privately employed in the Australian Capital Territory.

From 1st July, 1945, to 30th June, 1959, 6,244 houses and flats were erected for the Department of the Interior for letting.

Government rental houses may be purchased by tenants and the basis of sale is a minimum deposit of 5 per cent. of the first £2,000 of the purchase price fixed by the Department of the Interior and 10 per cent. of the balance, with a maximum advance by way of mortgage of £2,750. Repayment may be made over a maximum period of 45 years on all types of houses. Interest charged on loans is 4½ per cent. per annum. Since 1950, 1,491 houses have been sold to tenants.

Loans may be granted by the Commissioner for Housing to enable persons to purchase, erect or enlarge houses in the Territory or to discharge mortgages. Where the Commissioner's valuation of the property concerned does not exceed £2,000 the maximum loan may not exceed 95 per cent. of the valuation. If the Commissioner's valuation exceeds £2,000 the maximum loan is 95 per cent. of the first £2,000 and 90 per cent. of the balance (but in no case can the amount lent exceed £2,750). Repayment may be made over a maximum period of 45 years. The current rate of interest is 5 per cent. per annum. From 1st July, 1949, to 30th June, 1959, 621 loans were granted.

(iii) *Papua and New Guinea.* The Housing Loans Ordinance 1953 permits the advance of loans of up to £2,750 to any member of the community for the erection of a house or the purchase or extension of an existing house. The loans are limited to declared township areas and are repayable over a maximum period of 35 years. The effective rate of interest is 5 per cent. per annum. Up to 30th June, 1959, loans totalling £250,678 had been approved.

The Administration has this year started a project for providing low-cost houses for rental to indigenes and mixed-bloods. Tenders for the construction of 50 of these houses have been called.

4. **Other Housing Schemes in the States.**—(i) *General.* In each State, the major Government housing schemes operated by the State Housing Authorities are those provided for under the Housing Agreements between the Commonwealth and State Governments referred to earlier. Other State Government assistance to housing is referred to in the following paragraphs.

(ii) *New South Wales.* The principal schemes operating in New South Wales are:—

(a) *Commission-Financed Advances.* Under the Housing Act 1912–55, the Housing Commission is empowered to provide finance to persons to have houses erected on their own land, to purchase existing dwellings, or to effect improvements or repairs to houses. In respect of advances made under the Act prior to 1952, the maximum amount that could be lent was limited to £1,540, repayment of which could be made over a maximum period of 45 years. Interest charged was at the rate of $4\frac{1}{2}$ per cent. a year. Under this scheme 786 houses were erected. Regulations prescribing the present maximum amount that may be advanced and the limitation on income which may be received by an applicant for a loan have not been published and at present no advances are being made.

(b) *Rental Housing (other than Housing Agreements).* Upon request by other State Departments, the Housing Commission will erect houses for employees of those Departments, e.g., Education, Agriculture, Water Conservation, etc. These Departments provide the necessary land and funds needed to finance the erection of the houses. Rentals charged are fixed by the Departments in accordance with the salaries of the officers occupying the houses. The number of rental houses erected (other than under the Housing Agreements) is 811.

(c) *Sales Scheme.* During 1953–54, the Housing Commission began the erection of 100 houses for sale. Under this scheme, the Commission acted as the construction authority whilst administrative arrangements are carried out by the Rural Bank. Houses were sold on the basis of 10 per cent. deposit with repayment of the balance over a maximum period of 40 years. Construction of all houses has been completed.

(iii) *Victoria.* In 1956, a Home Finance Trust was established with the object of receiving money from institutions and others in order to make loans for the erection or purchase of houses. Applicants for loans must declare that they intend to use the houses as homes for themselves, their families and dependants. Except in special circumstances, no loan will be granted if the borrower or wife or husband of the borrower already owns a house in Victoria at the date of the proposed mortgage.

Loans granted are on the basis of a first mortgage over the house. Loans are not to exceed 95 per cent. of the value of the security (house and land) and are not made if the value of the security exceeds £4,500. In the case of purchase the house must not have been erected more than two years before the date of the mortgage. Repayment of loans may be made over a maximum period of 30 years, with interest charges determined by the Trust. At 30th June, 1959, 1,253 loans totalling £3,395,725 had been made.

(iv) *Queensland.* In this State there are two housing schemes operating—

(a) Under the State Housing Acts, 1945 to 1957, the Queensland Housing Commission makes advances to eligible applicants on the security of homes to be erected. A person to be eligible must be the proprietor of a suitable building site, must not already own a dwelling and must undertake to use the completed dwelling as a home for himself and family. The present maximum advances allowable under the Acts are £2,750 for a timber-frame building, £2,850 for a brick veneer and £3,100 for a brick or concrete building. The rate of interest at present chargeable on advances is $5\frac{1}{4}$ per cent. a year. Repayment may be made at the option of the borrower over either a 30-year or a 45-year period. A borrower or purchaser who elects to repay over a 30-year period, who is under 40 years of age, and who has passed a prescribed medical examination, is entitled to free life insurance cover in an amount sufficient to liquidate his indebtedness to the Commission in the event of his death before his loan has been fully repaid, provided that the maximum benefit payable under such insurance cover does not exceed

£2,250. The total amount advanced on completed dwellings up to 30th June, 1959, was £19,923,410. The number of dwellings constructed under these Acts up to 30th June, 1959, was 26,190.

- (b) *Workers homes* are erected by the Queensland Housing Commission under the Workers' Homes Act 1919–1957. These homes are intended for persons who are not the owners of building sites, and applications are confined to persons with a net annual income for taxation purposes of not more than £800. The Housing Commission builds the home to suit the applicant's needs, on Crown Land, or on land purchased for the purpose, which is then converted to perpetual leasehold tenure. An applicant pays a deposit of 5 per cent. of the purchase price of the home and the balance by monthly rent over a term of 30 to 45 years. The rate of interest is $5\frac{1}{2}$ per cent. a year. The number of houses constructed under this Act up to 30th June, 1958, was 2,346. No houses were completed under this Act in the year ended 30th June, 1959.

(v) *South Australia.* In South Australia, the Housing Trust builds houses for both rental and sale and, in addition, administers an emergency dwelling scheme for the South Australian Government. From July, 1946 to 30th June, 1959, 34,315 houses were erected by the Trust in both city and country areas.

- (a) *Rental Houses.* The majority of the Trust's rental houses are of brick or stone construction and are built in pairs in housing groups. The Trust has a large number of flats for rental, tenancy of which is restricted to married couples and others without young children. Specially designed flats for pensioners and other elderly persons of limited means are built. The Trust administers a scheme, on behalf of the South Australian Government, to assist people in country towns who cannot afford to pay an economic rent. Those assisted include war widows, deserted wives with families, servicemen's widows, pensioners and incapacitated ex-servicemen's families. Rents charged for accommodation are generally based on the overall cost of construction, and vary not only according to the size of the dwelling but also as to date of erection. As at 1st November, 1959, the rents of 5-roomed houses (i.e., 3 bedrooms) ranged from £2 2s. a week for houses of an older type to £3 7s. 6d. a week for houses then being completed. Factors taken into consideration when allotting rental houses include date of application, housing need and suitability of tenant. Persons with high incomes are asked to consider purchasing their own homes.
- (b) *Sales Scheme.* Houses built under this scheme, which was inaugurated in 1946, are of solid or timber-frame construction. More than 16,150 have been completed in both metropolitan and country areas since the scheme began. When houses are sold, the usual practice is for the Trust to recover the total cost of the house and land by the purchaser paying the total amount in cash or (as is usually the case) paying a deposit (which varies according to the type of house—at present £350 for a timber-frame house and £550 for a 5-roomed brick house—and the purchaser's ability to pay) and raising the balance by way of mortgage. In cases where the deposit and first mortgage are insufficient, the Trust may advance the balance by way of a second mortgage, the repayment term of which is a maximum of 30 years, interest being at the rate of $5\frac{1}{2}$ per cent. a year. In 1956, the Trust began the erection of houses, which may be of solid or timber-frame construction or a mixture of both, for individuals on their own land. Houses are built by contract under the Trust's supervision. Prices for building and supervision of the standard houses covered by the scheme in late 1959 ranged from £2,950 for a 2-bedroom brick house to £4,600 for a 6-roomed (2-storey) house.
- (c) *Rural Housing.* In order to assist primary producers, the Trust will erect houses on the applicant's own land for his own use or that of his employees, either using local materials or transporting prefabricated houses to the site. At the end of 1959, prices for houses erected on level sites within 100 miles of Adelaide ranged from £2,150 for a 2-bedroom minimum type timber house to £2,750 for a 3-bedroom, asbestos cement sheeted, timber house.

(vi) *Western Australia.* The State Housing Commission is encouraging home ownership under the State Housing Act 1946–58, which is a continuation of the Workers' Home Board Act, originally promulgated in 1911.

Purchases can be arranged under—(a) a Freehold scheme, either by way of mortgage or contract of sale, and (b) Leasehold on either a perpetual Crown Lease or a lease for a term of years from the Commission. Under the Leasehold scheme purchasers can convert to freehold conditions upon having a 10 per cent. equity in the improvements and agreeing to purchase the land at the valuation originally determined at the date of commencement of the lease.

The housing authority builds the houses by private contract on land provided by the applicant or the Commission. The maximum loan is £2,500 under the State Housing Act except for houses built north of the 26th parallel of latitude in which case the Minister can approve of an advance exceeding £2,500.

To proceed under the mortgage conditions a deposit of not less than 10 per cent. is required but under the contract of sale or leasehold provisions the minimum deposit is £100. The interest rate in both cases is 5½ per cent. per annum and the repayment period is 45 years.

To obtain assistance an applicant cannot have an income exceeding £1,093 per annum plus £25 a year for each dependent child under 16 years of age. This figure varies according to the movement of the basic wage. However, north of the 26th parallel the Minister may allow a higher income family to be assisted.

A second mortgage scheme exists under the State Housing Act which provides that assistance be limited to those applicants who are building or purchasing new residential improvements, the cost of which does not exceed £3,000. By policy decision the Commission limits the second mortgages to a maximum of £1,000.

The number of houses completed under this Act to 30th June, 1959, was—Freehold 1,002, Leasehold 2,375, assistance by second mortgage 507.

(vii) *Tasmania*. The Agricultural Bank is authorized under the terms of the Homes Act 1935 to make loans to eligible persons for home building on the security of a first mortgage over the property. To be eligible a person must be married or be about to marry or have dependants for whom it is necessary to provide a home. At present, there are no statutory limitations as to the maximum income which an eligible applicant may receive. However, it is the policy of the Bank not to make loans to persons who are well able to provide houses for themselves. The maximum amount which the Bank will lend at present is £3,300 on homes built in proclaimed brick areas, and £3,000 on timber houses. The rate of interest at present charged is 5½ per cent. a year. Present policy is to allow a maximum of 31 years for repayment of loans.

5. War Service Homes.—The provision of War Service Homes is a function of the War Service Homes Division of the Department of National Development, and the administration of the War Service Homes Act is under the control of the Director of War Service Homes.

The War Service Homes Act 1918–1956 is a measure for the provision of homes for Australian ex-servicemen who served during the 1914–1918 War or the 1939–1945 War and, subject to the statutory provisions of the Act, to persons with service in Korea or Malaya. Provision is made also for assistance to the female dependants of Australian ex-servicemen and other classes of eligible persons as defined in the Act. Assistance may be granted to an eligible person and the wife or husband of that person, as the case may be, as joint tenants.

The maximum amount of loan or advance which may be granted under the Act is £2,750. The period of repayment may be approved up to 45 years. In the case of a widow or widowed mother of an Australian ex-serviceman, the period may be extended to a maximum of 50 years.

The War Service Homes Division does not provide homes for occupation on a purely tenancy basis.

From the inception of operations under the War Service Homes Act to 30th June, 1959, (figures in parentheses indicate cases where eligibility has been established as a result of service during the 1939–45 War or in Korea or Malaya), 199,407 (146,764) applications were approved; 75,740 (52,326) homes were built, or assistance to build them was given; 81,437 (64,999) homes were purchased; and 21,034 (17,328) mortgages were discharged. The total number of homes provided under the War Service Homes Act to 30th June, 1959, was 178,211 including 134,653 to persons who served during the 1939–45 War or in Korea or Malaya. In addition, the Division had approved 16,523 transfers and resales, of which 7,645 were in respect of persons whose eligibility had been established as a result of service during the 1939–45 War or in Korea or Malaya. Applications approved under the Commonwealth-State Housing Agreements of 1955 and 1956 numbered 1,676 (1,578) and homes purchased 1,618 (1,531).

During 1958–59, 12,630 (11,865) applications were approved; 5,254 (5,063) homes were built or assistance to build them was given; 6,660 (6,235) homes were purchased; and

1,497 (1,437) mortgages were discharged. The total number of homes provided during the year 1958–59 was 13,411 (12,735). Transfers and resales approved numbered 1,020 (874). Applications approved under the Commonwealth-State Housing Agreements of 1955 and 1956 numbered 217 (203) and homes purchased 238 (232).

At 30th June, 1959, 1,562 homes, including 206 group homes, were in course of construction; 501 contracts, of which 68 were for group homes, had been let but work had not started; and 405 tenders, including 63 for group homes, had been called but not finally dealt with. The majority of these homes are being provided for persons who served during the 1939–45 War.

The total capital expenditure from inception to 30th June, 1959, was £329,998,416, including £35,158,814 for 1958–59. Receipts from inception to 30th June, 1959, amounted to £139,065,703, including £16,769,375 during 1958–59. Of the total receipts, £68,853,242 had been paid to the National Debt Sinking Fund, including £7,559,838 for 1958–59.

At 30th June, 1959, the total amount of insurances in force, including cover notes, amounted to £422,035,406. During 1958–59, the premium income amounted to £322,236, and expenditure from the War Service Homes Insurance Trust Account to £169,637.

At 30th June, 1959, arrears of instalments outstanding amounted to £570,115, or 0.43 per cent. of the total instalments due.

6. Other Forms of Government Assistance.—(i) *General.* In addition to the assistance given to housing as outlined above, the Commonwealth and State Governments, through advances by Government Banks and the exercise of certain guarantees of the operations of Co-operative Terminating Building Societies by State Governments, further assist in making finance available for the erection and purchase of houses.

(ii) *Government Banks.* The terms and conditions governing the making of advances may be altered from time to time; consequently, no attempt has been made to tabulate them. However, the usual loan for a house of solid construction (brick, etc.) is generally between £2,500 and £3,000. The average loan for a timber-frame house is £2,250. Interest rates charged average 5½ per cent. a year. In some institutions this may be changed, usually after from 5 years to 10 years from the date of the loan. The maximum period of repayment ranges from about 20 years for timber-frame houses to 30 to 40 years for a house of solid construction.

(iii) *Building Societies.* There are some 1,700 building societies in Australia, over 95 per cent. of which are of the terminating type. Most of the terminating societies are in New South Wales and Victoria, where the movement derives its strength from State legislation, under which the Government of the State guarantees loans made to the societies. Terminating societies also operate in Queensland, where legislation has recently been introduced to provide a government guarantee for loans made to them, and in Western Australia and Tasmania. A number of terminating societies of the Starr-Bowkett type, an earlier and now less popular form of terminating society, operate in all States.

In addition to the terminating societies, there are a number of permanent building societies operating in all States under State legislation. State Governments do not generally guarantee the borrowings or lendings of these societies. However, in Western Australia the Housing Loan Guarantee Act, 1957 provides guarantees in respect of loans made by approved lending institutions (including permanent building societies), to individuals on the security of a mortgage. A premium, one-quarter of 1 per cent. of the balance of the loan outstanding at set intervals, is payable by the lender in return for the guarantee.

§ 4. Statistical Summary—New Building:

1. General.—The statistics in this section relate to the operations of private contractors, Government authorities and owner-builders, with the exception of those relating to employment, which do not include the numbers of persons working on owner-built houses.

The following outlines the scope of the statistics; (i) only the erections of new buildings as distinct from the constructions of railways, bridges, earthworks, water storage, etc., is covered; (ii) major new additions to existing buildings are included as new buildings; (iii) minor additions, alterations, renovations and repairs are excluded because of the difficulty of obtaining lists of persons who undertake this work; (iv) converted military huts and temporary dwellings are excluded; (v) figures for houses exclude flats and dwellings attached to other new buildings (the value of dwellings attached to other new buildings is included with the value of buildings to which they are attached); (vi) imported prefabricated houses are included; (vii) details obtained from Government authorities and building contractors refer to all areas whereas details for owner-builders cover only areas subject to building control by Local Government Authorities.

These statistics are available for each quarter from the September quarter, 1945.

More detailed information on building activity may be found in the *Quarterly Bulletin of Building Statistics*.

The following definitions of terms used in this section are necessary for interpretation of the data presented:—

Owner-built. An "owner-built" house is one actually erected or being erected by the owner or under the owner's direction without the services of a contractor who is responsible for the whole job.

Contract-built. Includes the operations of all building contractors and Government instrumentalities which undertake the erection of new buildings.

Commenced. A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point that this represents in building operations, classifications made by informants may not be entirely uniform.

Completed. A building is regarded as having been completed when the contractor has fulfilled the terms of the contract. As with commencements, the classifications made may not be entirely uniform.

Employment. Figures relate to persons actually working on the jobs of contractors who undertake the erection of new buildings and of Government instrumentalities which erect new buildings on their own account. They include persons actually engaged on alterations, additions, repairs and maintenance when these jobs are undertaken by such contractors and instrumentalities. The figures include working principals and their employees, men working as or for sub-contractors, and men temporarily laid off on account of weather.

Contractors are asked to give details of the persons employed on a specified day but, because of frequent movement between jobs and because some persons (such as electricians, etc.) may work on several jobs which are under construction simultaneously, some duplication may occur.

The figures exclude persons working on owner-built houses, and employees of builders who undertake only alterations, additions, repairs and maintenance.

Values. All values shown exclude the value of land and represent the estimated value of buildings on completion.

2. New Houses.—(i) *Commenced, Completed and Under Construction, 1954–55 to 1958–59.* The next table provides a summary of the number of new houses commenced, completed and under construction in each State and Territory.

NEW HOUSES: NUMBER. (Including Owner-built Houses.)

Total	79,838	75,536	65,540	71,179	78,797

(a) Includes Northern Territory flats.

3. **New Flats.**—The figures in the foregoing tables, except those for the Northern Territory, do not include particulars of new flats. The summary below shows the number of new flats commenced, completed and under construction in each State and Territory for the years 1954-55 to 1958-59. It should be noted: (i) that the figures are additional to the numbers of houses shown in other tables, (ii) that each flat is counted as a separate unit, and the numbers shown therefore relate to individual flats, and (iii) that new flats only are included, i.e., the conversions of old buildings into flats are omitted, (iv) "home units" are included as flats.

NEW FLATS: NUMBER.

CHAPTER XII.

LABOUR, WAGES AND PRICES.

NOTE.—Reference is made in this chapter to retail and wholesale price indexes. For particulars of the Export Price Index, see Chapter XIII., § 16, and of the Farm Production Price Index, see Chapter XXX., § 2.

A. RETAIL PRICES AND PRICE INDEXES.

§ 1. General.

The information on retail prices and price indexes presented in this chapter is extracted from the annual *Labour Report*. For a full explanation of methods adopted and an analysis of problems involved see the detailed reference in Chapter I. of *Labour Report* No. 46, 1958.

Retail prices of food and groceries and average rentals of houses for years extending back to 1901 were collected by the Commonwealth Statistician, and in some cases have been recorded by the Statisticians of various States for earlier years.

Retail prices of a more extensive range of commodities (including clothing) and certain services in common demand have been ascertained at frequent and regular intervals since 1923 for each of the six capital cities and for 27 of the more important towns of Australia. Comparable information is available for the month of November in each year from 1914 to 1922 for each of the six capital cities. The list of items priced for index purposes is published in *Labour Report* No. 46.

§ 2. Previous Retail Price Indexes.

1. General.—Four series of retail price indexes had been compiled at various times for Australia by the Commonwealth Statistician prior to 1954. Each of these was continued until changed conditions required the compilation of indexes more directly relevant to current conditions. The respective indexes were—

- (i) *The "A" Series Index* (covering food, groceries and house rents) was first compiled in 1912 with the year 1911 as base = 1,000. It was discontinued in June, 1938.
- (ii) *The "B" Series Index* (covering food, groceries and rent of 4 and 5 roomed houses) was first compiled in 1925 and continued until December Quarter, 1953. It was the food and rent constituent of the "C" Series Index and was designed to replace the "A" Series Index for general statistical purposes.
- (iii) *The "C" Series Index* (covering food and groceries, rent of 4 and 5 roomed houses, clothing, household drapery, household utensils, fuel, lighting, fares, smoking and some other miscellaneous items) was first compiled in 1921 and published at quarterly intervals from June Quarter, 1922. It was used by the Commonwealth Court of Conciliation and Arbitration for purposes of quarterly wage adjustments from May, 1934, to August, 1953. Some State tribunals use or consider it in their proceedings. Its publication in mimeograph each quarter will be continued for the present in the customary form and on its customary basis. For general statistical purposes it has been replaced by the Interim Retail Price Index (1952–53 base year) described at length in a Statistical Bulletin published on 24th March, 1954, and briefly in the following section of this chapter.
- (iv) *The "D" Series Index*, derived by combining the "A" and "C" Series Indexes, was used by the Commonwealth Court of Conciliation and Arbitration from May, 1933, to May, 1934, and then discontinued.

Of the four retail price indexes described above, only the "C" Series is now compiled. The new Interim Index will continue in its present form until the components of certain groups are finalized.

2. The "Court" Index.—In 1937, the Commonwealth Court of Conciliation and Arbitration introduced a "Court" Index for the purpose of its system of making automatic quarterly adjustments to the basic wage within its jurisdiction. By decision of the Court the "Court" Index ceased to be issued by the Industrial Registrar as at December Quarter, 1953. "Court" index numbers were an arithmetical conversion of the "C" Series Index.

§ 3. The Interim Retail Price Index (1952-53 Base Year).

1. **Origin of the Interim Retail Price Index (1952-53 Base Year).**—The list of component items and the weighting pattern of the "C" Series Retail Price Index were first adopted in 1921 but were reviewed by Conference of Statisticians in 1936. (*See Labour Report* No. 41, 1952, page 33.)

From the outbreak of war in 1939 to late in 1948, periodic policy changes in regard to various war-time controls (including rationing) caused recurrent changes in consumption and the pattern of expenditure. This rendered it impracticable either to produce a new index or to revise the old one on any basis that would render the index more representative, than it already was, of the changing pattern.

When commodity rationing had virtually ceased in the latter part of 1948, action was taken by the Statistician to collect price data of about 100 additional items and to gather information as to current consumption and expenditure patterns. By the middle of 1949 a considerable number of new price series were coming into being and the body of data available as to expenditure and consumption (in the post-rationing period) was beginning to indicate something of the new weighting pattern likely to be appropriate for post-war review of the components and construction of the "C" Series Index.

There supervened in the next two years conditions which caused wide price dispersion, a very rapid rise in prices and a new sequence of changes in consumption and the pattern of wage earner expenditure. Under these conditions it was not possible to devise any new weighting pattern for the years 1949-50, 1950-51 and 1951-52 likely to be better suited to the index or more continuously representative of conditions then current than was the existing "C" Series Index on the 1936 revision. Conference of Statisticians therefore deferred revision of the weighting system and component items of the "C" Series Index until it was advised by the Acting Commonwealth Statistician in June, 1953 (a) that although the aggregate "C" Series Index (as verified by supplementary indexes) was still reasonably reliable for current use, some of the component groups (more particularly food and miscellaneous) were not satisfactory individually; and (b) that the time had arrived either to produce a new index or to reconstruct the "C" Series Index extensively.

The Interim Retail Price Index has been compiled pursuant to Resolution 13 of Conference of Statisticians in June, 1953, reading—

"13. Retail Price Indexes—

- (a) That in view of the persistence of recurrent changes in the pattern of consumer expenditure in the post-war period, it is undesirable to make a general revision of the list of items and weighting system of the "C" Series Retail Price Index at present, unless industrial tribunals expressly desire some revision for special purposes.
- (b) That an Interim Retail Price Index be compiled with putative weights and components representative, as nearly as may be, of the post-war pattern of consumer usage and expenditure.
- (c) That, having regard to the complexities of the problem and the limit of staff resources available, such interim index relate only to each capital city and to the six capital cities combined.
- (d) That attention be drawn again to the statement already published that the "C" Series Retail Price Index cannot measure changes in relative retail price levels as between capital cities consistently with its main purpose of measuring periodic changes in retail price levels for each city.
- (e) That the problem of measuring comparative retail price levels as between cities at any point of time differs in principle from the problem of measuring periodic variations in price level in an individual city."

The Interim Retail Price Index (1952-53 base year) is used as the current retail price index in statistical publications of the Commonwealth Statistician for general statistical purposes. It relates only to six capital cities of Australia because it is not practicable with existing staff resources to collect price data for the greatly enlarged list of items for 27 other cities and towns. These continue to be covered as to the less extensive list of items used for the "C" Series Index.

At times appreciable disparities appear in the movement of the respective indexes for individual cities from quarter to quarter. The Interim Index, being based on recent weights and an extended list of items, is the more representative measure of quarterly retail price variations.

2. **Definition of the Interim Retail Price Index.**—This index provides the interim results of researches designed to measure retail price variations (with 1952-53 = 100 as base year) on the basis of—

- (a) a current pattern of wage earner expenditure using recent consumption weights for foods and recent expenditure weights for combining groups of items into the aggregate index;
- (b) a wider range of commodities and services than that covered by any existing price index in order to provide greater representativeness; and
- (c) individual city weights for such items as electricity, gas and fares.

The components and weighting of the Interim Retail Price Index are being reviewed in the light of data derived from the census of retail sales as to consumer expenditure on various kinds of goods, estimates of consumer expenditure on services relevant to construction of a retail price index of this type and data as to rents and housing derived from the Census of 30th June, 1954 and additional special surveys. It is proposed to cast the index into final form as soon as possible and this may entail some revision in the index.

3. **Differences between the Structure of the Interim Retail Price Index and that of the "C" Series Retail Price Index.**—The main differences between the structure of the Interim Retail Price Index and that of the "C" Series Retail Price Index are (a) the group weights and item weights of the Interim Index relate broadly to the consumption pattern 1950-53, while those of the "C" Series Index relate to pre-war years; and (b) the Interim Index includes a large number of items not included in the "C" Series Index.

A full list of the items used in the Interim Index is shown on pages 9-12 of *Labour Report* No. 46. The changes in structure of each group of items as adopted for the Interim Retail Price Index are summarized below.

(i) **Food Group.**—The weights of some of the main items (e.g., milk, eggs, meat, potatoes and flour) in the Interim Index are substantially different from those of the "C" Series Index. Twenty-four new items extend the group coverage over a wider field. The total number of items in the Food Group of the Interim Index is 60 as compared with 38 in the "C" Series Index. The principal new items are lamb, packaged breakfast foods, biscuits, ice cream, packet cheese, honey, sandwich spreads, coffee, cocoa, soft drinks and certain types of confectionery.

(ii) **Clothing and Drapery Group.**—In the Interim Index, 17 new items have been added to the Clothing and Drapery Group, and 25 items each formerly represented by one type of article are now each represented by two or more types. Consequential adjustments have been made in weights of individual items. The principal new items added to this group are:—sports coat, sports trousers, cardigan (and other types of knitted wear), overalls, piece-goods (rayon, cotton and woollen) and knitting wool.

(iii) **Rent Group.**—Only minor changes have been made in the Rent Group. Available data indicate (a) that, in general, very few new houses have been built by private owners for renting in the post-war years; (b) that in some cities considerable numbers of new government houses have been built for renting or occupancy on a quasi-rental basis; and (c) that there has been a substantial increase in the numbers of owner-occupied houses, including new instalment-purchase or quasi-instalment-purchase houses under governmental and private housing schemes. In recent years the difficulty of obtaining data suitable for the housing component of a price index has therefore intensified. The Census of 1954 showed that a very rapid diminution had occurred since 1947 in both the numbers and proportions in privately rented houses. Recent supplementary surveys indicate a continuation of this trend in the six capital cities. Further study is therefore being given to the hitherto intractable problems associated with measuring at quarterly intervals "housing price" variations in a form suitable for use in a retail index in respect of owner-occupied houses, instalment-purchase houses, and houses occupied under the various types of governmental housing schemes.

(iv) **Other Groups.**—Six new sub-groups are included in the Interim Index, comprising 75 items as compared with 32 in the "C" Series Index. The principal new items are garden tools, floor coverings, shaving cream, toilet soap, etc., patent medicines, baby foods, haircuts, dry cleaning, shoe repairs, postage, etc. Necessary adjustments have been made to bring the group weight into conformity with recent expenditure and consumption patterns. The weight of this group is much greater than it was in the "C" Series Index.

(v) **Group Weights.**—The group weights in the new Interim Index have been brought into general conformity with the estimated group distribution of wage earner household expenditure in recent years over the field covered. In some cases the weights are putative weights assessed on available data and are subject to some revision.

In the year 1952-53 the ratio of the individual group "aggregate expenditure" to the "aggregate expenditure" of the whole index for the six capital cities combined was as follows:—

Group.	"C" Series Retail Price Index.	Interim Retail Price Index.
	Per cent.	Per cent.
Food	41.0	37.1
Clothing and Drapery	33.0	26.8
Rent	11.3	9.0
Other Groups	4.5	4.6 Fuel and Light
	5.3	4.6 Household Sundries
	2.8	2.5 Certain Repairs and Services
	2.1	3.0 Cinema, Radio, Newspapers
		6.6 Rail, Tram and Bus Fares
		5.8 Tobacco and Cigarettes
	100.0	100.0

In the Interim Index common weights are adopted for all groups and items in the index for each city except in respect of fares, gas, electricity and some minor items. The resultant indexes measure price movement from period to period for each city separately. While they indicate *degree* of price movement from time to time for respective cities, they do not indicate the *relative* level of prices (or level of living costs) in each city. For that reason the Interim Index Number for each city in the base year 1952-53 is 100.

4. Comparison of Trends of the Interim Retail Price Index with Trends of the "C" Series Retail Price Index.—The following table shows for each of the years 1952-53 to 1958-59 and for each quarter from March Quarter, 1957 to December Quarter, 1959 the Interim Index for the six capital cities combined, with the year 1952-53 as base = 100, in comparison with the "C" Series Index arithmetically converted to the same base:—

Period.	Six Capital Cities: Weighted Average. (Base: Year 1952-53 = 100.)			
	"C" Series Index.		Interim Index.	
Year ended June—			A	B
1953	100.0		100.0	100.0
1954	102.8		102.2	102.5
1955	103.7		103.7	103.6
	A	B		
1956	107.5	108.8	107.0	108.0
1957	112.2	114.1	113.0	114.3
1958	114.7	114.3	115.7	115.6
1959	117.5	117.2	118.4	118.5
Quarter ended—	A	B		
1957—March	112.6	112.8	113.5	113.7
June	113.5	113.8	114.5	114.8
September	114.0	113.8	115.1	115.1
December	114.0	113.5	115.1	114.9
1958—March	115.0	114.7	115.9	115.8
June	115.9	115.3	116.7	116.5
September	116.3	115.7	117.1	116.9
December	117.3	117.0	118.3	118.3
1959—March	117.7	117.8	118.8	119.0
June	118.6	118.4	119.7	119.7
September	119.7	119.6	120.4	120.5
December	121.0	120.8	121.4	121.5

NOTE.—Indexes in columns "A" exclude, and those in columns "B" include, potatoes and onions. (See para. 5 on next page.)

The figures appearing after the decimal point possess little significance for general statistical purposes. They are inserted to avoid the distortion that would occur in rounding off the figures to the nearest whole number. Price indexes cannot measure aggregate price variations with an accuracy of the order of one-tenth of 1 per cent.

With changing conditions significant divergencies may occur between the movements shown by a retail price index (such as the "C" Series Index) constructed on pre-war weights and a comparatively limited range of major items and a retail price index (such as the Interim Index) constructed on 1950-53 weights and a broader list of items.

Due regard should be paid to the fact that a composite price index is necessarily an approximate summary which combines into one aggregate price variations of many items. Any more rigid use of the index for specific purposes is the responsibility of the bodies or persons using the indexes.

5. Compilation of Indexes Including and Excluding Price Movement of Potatoes and Onions.—Abnormally large seasonal fluctuations in prices of potatoes and onions had a major effect (first upwards and then downwards) on the movement of the price indexes in most cities from September Quarter, 1956 to March Quarter, 1957. The fluctuations also caused highly disparate movements in the aggregate indexes as between cities. In order to provide an indication of the trend of the indexes apart from these abnormally large seasonal fluctuations, index numbers excluding the effects of price movements of potatoes and onions are calculated for comparison with those which include those items.

The Interim Retail Price Index is calculated both inclusive and exclusive of potatoes and onions as from the base period 1952-53. For the "C" Series Retail Price Index, index numbers have been calculated excluding the price movement of potatoes and onions as from (and including) September Quarter, 1955.

§ 4. Tabular Statements of Retail Price Index Numbers.

1. General.—Information on retail price movements is published as follows:—

(i) *Monthly.* The *Monthly Review of Business Statistics* contains annual and quarterly index numbers to the latest available date. The *Digest of Current Economic Statistics* contains annual and quarterly index numbers for the Interim Retail Price Index.

(ii) *Quarterly.* Statements are issued about three weeks after the end of each quarter relating to the Interim and the "C" Series Retail Price Indexes respectively for that quarter and immediately preceding quarters. The *Quarterly Summary of Australian Statistics* contains annual and quarterly index numbers to the latest available date. This publication also contains certain average prices of items of food and groceries for the latest available quarter.

(iii) *Annually.* In addition to information in this publication the annual *Labour Report* contains index numbers for past years and the quarterly results for recent years. Certain average prices for the latest year of items of food and groceries are also published in the *Labour Report*.

2. The "C" Series Retail Price Index.—A table of "C" Series index numbers for the weighted average of the six capital cities combined, together with index numbers for each of the four main groups of items in the "C" Series Index, for each year from 1914 to 1959 is shown on page 411. Detailed tables were last published in *Labour Report* No. 41, 1952, pages 19-27.

3. The Interim Retail Price Index.—On the following pages are published:—

(i) the Interim Retail Price Index numbers for each of the years ended June from 1953 to 1959, and for each quarter of the calendar year 1959 for each capital city and for the six capital cities combined, together with separate indexes for each of the four groups of items (pages 408-9).

(ii) the Interim Retail Price Index numbers for each of the years ended June from 1953 to 1959, and for each quarter during the period March Quarter, 1957 to December Quarter, 1959, for the weighted average of the six capital cities combined, together with separate indexes for each of the four groups of items (page 409).

INTERIM RETAIL PRICE INDEX NUMBERS.

(Base of each Index: Year 1952-53 = 100.)

NOTE.—The index numbers hereunder are designed to measure aggregate variations in retail prices of specified groups of items for specified cities individually. They measure variations from time to time and not differences in price level as between cities nor comparative costs of groups of items.

(a) See para. 5 on page 407. (b) Weighted average. (c) Rent.—The rent index numbers shown in the table above and elsewhere in this publication measure the proportionate rise and fall in the average weekly rentals paid for houses of four and five rooms taking corresponding houses throughout. They are "price" indexes in the strict sense, i.e., they are designed to measure only the "price" element in rent fluctuations. Rentals of new tenanted houses completed since the end of the 1939-45 war are not taken into account. (d) A group of items under the following headings—Electricity, Gas and Firewood; Household Sundries; Services; Cinema Admission, Radio Licence and Newspapers; Fares; and Tobacco and Cigarettes.

(a) The index in column "A" excludes, and that in column "B" includes, potatoes and onions. See para. 5 on page 407. (b) See note (c) to table above.

§ 5. The "C" Series Retail Price Index: 1914-1959.

1. **Construction.**—Full particulars relating to the construction, items, weights and methods of tabulation of the "C" Series Retail Price Index were last published in *Labour Report* No. 41, 1952, pages 10-18. Tabular statements of index numbers were shown on pages 19-27 and historical particulars of the index, and its relation to automatic basic wage variations prior to 12th September, 1953, on pages 32-42.

2. **Significant Dates.**—The following table furnishes index numbers for the six capital cities as a whole for certain significant dates since November, 1914—the earliest date for which this index is available.

"C" SERIES RETAIL PRICE INDEX NUMBERS.

WEIGHTED AVERAGE OF SIX CAPITAL CITIES.

(Base: Weighted Average of Six Capital Cities, 1923-27 = 1,000.)

1914, November	687 (Beginning of 1914-18 War)
1918, November	905 (End of 1914-18 War)
1920, November	1,166 (Post-War peak)
1922, November	975 (Post-War trough)
1929, Year	1,033 (Pre-Depression peak)
1933, Year	804 (Depression trough)
1939, September Quarter	916 (Pre-1939-45 War)
1943, March Quarter	1,123 (Pre-Price Stabilization)
1943, June Quarter	1,143 (1939-45 War peak)
1945, September Quarter	1,126 (End of 1939-45 War)
1948, September Quarter	1,311
1950, September Quarter	1,572
1952, September Quarter	2,238
1953, September Quarter	2,321
1954, September Quarter	2,321
1959, September Quarter(a)2,707

(a) Excludes price movement of potatoes and onions. See para. 5 on page 407.

The index rose by approximately 32 per cent. during the 1914-18 War, and by a further 29 per cent. in the two post-war years (November, 1918 to November, 1920). From November, 1920 to November, 1922, there was a fall of 16 per cent. and the index remained relatively stable until the onset of the depression in 1929. During the four years of the depression 1929 to 1933 the index fell by 22 per cent., thereafter rising steadily until 1939 when it was nearly 14 per cent. above the level of 1933, and approximately at the level it had occupied at the date of the Armistice of 1918. Between the outbreak of war (September, 1939) and March, 1943 (pre-price stabilization) the index rose by approximately 23 per cent. to a level slightly below that reached at the height of the post-war boom in 1920. Compared with that for March Quarter, 1943, the index number at the close of the war was practically unchanged.

Immediately after the outbreak of the war, price control was established by the Government under Regulations dated 28th September, 1939, and a national policy of price stabilization was applied as from 12th April, 1943, backed by more stringent price control and price subsidies. The retail price level, as measured by the index, remained relatively steady throughout 1944 and 1945 at the level of March, 1943. This stabilized level was approximately 23 per cent. above that of 1939 and 63 per cent. above the level prevailing at the beginning of the 1914-18 War. After June Quarter, 1946, war-time controls, subsidies, etc., were progressively modified and by early 1949 had been virtually eliminated. In the latter part of 1950, export prices (especially for wool) rose very substantially. In December, 1950, the Commonwealth Court of Conciliation and Arbitration raised the basic wage by approximately 14 per cent. Concurrently, public works expenditure and private investment rose to very high levels.

This retail price index rose by 16 per cent. in the three years following the end of the 1939-45 War (i.e., to September Quarter, 1948) and by 77 per cent. in the next five years to September Quarter, 1953, and remained relatively stable at that level until December

Quarter, 1954. Since then the index has risen each year and by September Quarter, 1959, was approximately 17 per cent. higher than at September Quarter, 1954. This level was approximately 196 per cent. above that of 1939.

3. "C" Series Retail Price Index, Six Capital Cities, 1914 to 1959.—The movement in the various groups of the index and in the index as a whole for each year for which it has been compiled is shown in the following table for the six capital cities combined:—

**"C" SERIES RETAIL PRICE INDEX AND ITS "GROUP" INDEX NUMBERS(a)
FOR THE SIX CAPITAL CITIES COMBINED.**

(Base of Each Group: Weighted Average of Six Capital Cities, 1923-27 = 1,000.)

Period.	Food and Groceries. (b)	Rent (4 and 5 Roomed Houses). (c)	Clothing.	Miscel- laneous.	Total "C" Series Index. (b)

June "	3,096 3,086	1,524	3,440	2,473	2,681 2,677
September "	3,139 3,132	1,544	3,455	2,484	2,707 2,704
December "	3,170 3,160	1,567	3,504	2,492	2,735 2,732

(a) "Group" index numbers in the above table cannot be compared with each other in order to show the relative cost of Food and Groceries, Rent, Clothing or Miscellaneous requirements, since each "Group" has its own base = 1,000, namely, the weighted average cost for the six capital cities as a whole during the five-year period 1923-27. (b) The index in column "A" excludes, and that in column "B" includes, the price movement of potatoes and onions. See para. 5 on page 407. (c) See note (c) to table at top of page 409. (d) November.

§ 6. International Comparisons.

The following table shows the movement of retail prices in recent years in Australia and certain other countries.

RETAIL PRICE INDEX NUMBERS.

(a) The index in column "A" excludes, and that in column "B" includes, the price movement of potatoes and onions. See para. 5 on page 407. (b) New series cannot be linked to former series. (c) New Series linked to former series. (d) Consumers' Price Index from March Quarter, 1949, onwards. Index numbers for earlier periods (shown for purposes of comparison) are obtained by linking the movement in the Retail Price Index (base 1926-30) to the new index. (e) Not available.

B. WHOLESALE PRICES AND PRICE INDEXES.

§ 1. General.

Two indexes of wholesale prices have been compiled by the Commonwealth Bureau of Census and Statistics. These are:—

- (i) The Melbourne Wholesale Price Index;
- (ii) The Wholesale Price (Basic Materials and Foodstuffs) Index.

Particulars of the Melbourne Wholesale Price Index, which is now obsolescent, are given in § 3 commencing on page 414.

After reviewing the list of items and weighting of this index, the 1930 Conference of Statisticians resolved that a new index of wholesale prices of basic materials and foodstuffs should be compiled. This index—the Wholesale Price (Basic Materials and Foodstuffs) Index—which extends back to the year 1928 and is compiled monthly, is a special purpose index and one of a series of wholesale price indexes designed for special purposes.

§ 2. Wholesale Price (Basic Materials and Foodstuffs) Index.

1. **Price Quotations.**—The prices used in the index have in the main been obtained directly from manufacturers and merchants, and, with a few important exceptions, from Melbourne sources. Apart from locally-produced building materials and one or two minor commodities, however, the price movements may be taken as representative of variations in wholesale prices of basic materials in most Australian markets.

Commodities in the index are priced in their primary or basic form wherever possible and, in respect of imported materials, as nearly as may be at the point where they first make effective impact on the local price structure. Thus the prices of imported goods are not taken at the time of import, but rather on an ex-bond (or into factory) basis.

Broadly, where home-consumption prices exist for local products, they have been used in this index. During the years 1950–51, wool for local manufacture was subsidized, and the home-consumption price for wool was used to calculate the index numbers shown in the table on page 414.

2. **Commodities and Grouping.**—For purposes of this index “basic” materials (as opposed to certain of the foodstuffs) are commodities in the primary or basic forms in which they first enter into productive processes carried out in Australia. The list of items is divided into seven main groups, each of which is sub-divided into goods which are mainly imported, and goods which are mainly home-produced. The percentage of the total aggregate in 1959 contributed by each group was as follows:—Metals and coal, 17.53; oils, fats and waxes, 8.83; textiles, 2.98; chemicals, 3.93; rubber and hides, 2.15; building materials, 10.66; foodstuffs and tobacco, 53.92. Goods principally imported comprised 24.46 per cent. of the total aggregate in 1959, and goods principally home-produced, 75.54.

A full list of the commodities and the quantity-multipliers (weights) is published in *Labour Report* No. 46, 1958, page 26.

3. **Method of Construction.**—The index is constructed on the simple aggregative fixed-weights formula. The weights (quantity-multipliers) are based on estimates of the average annual consumption of the commodities in Australia during the period 1928–29 to 1934–35 inclusive. Changes in usage, changes of category as between “imported” and “home-produced” for some commodities, and changes in the industrial structure have affected the validity of some of the weights in the index.

During 1956, supplies and prices of potatoes and onions fluctuated violently upwards and downwards between abnormally wide limits. These fluctuations were so great as to dominate the movement of the sections of the index in which these items were included, namely, “Foodstuffs and Tobacco”, “Goods Principally Home-produced” and “Total All Groups”. In the circumstances of the case, neither seasonal adjustment nor conversion of the index to a “changing weights” formula could be applied to eliminate these transient fluctuations. Accordingly, in order to provide a representative measure of general trend in wholesale prices, the index was reconstructed as from July, 1936 by omitting potatoes and onions.

Consideration is being given to the enlargement of the index to cover additional groups and to revision of the weighting pattern of the index.

4. **Index Numbers.**—Index numbers for each group of commodities and for all groups combined for the index of wholesale prices of basic materials and foodstuffs are given in the following table. Current index numbers, on the base: Average of three years ended June, 1939 = 100, are published monthly in the mimeographed statistical bulletin *Wholesale Price (Basic Materials and Foodstuffs) Index* and in the *Monthly Review of Business Statistics*. A table showing index numbers computed to the base 1928 = 100 is published in the *Labour Report*.

WHOLESALE PRICE (BASIC MATERIALS AND FOODSTUFFS) INDEX NUMBERS.

(Base of each Group: Average of 3 years ended June, 1939 = 100.)

Period.	Basic Materials.							Food-stuffs and Tobacco. (a)	Basic Materials and Foodstuffs.

(a) During 1956 these indexes were reconstructed from July, 1936 by excluding potatoes and onions. See para. 3 on p. 413. (b) Represents only such imported commodities as are included in the Wholesale Price Index and does not measure changes in the prices of all imports.

§ 3. Melbourne Wholesale Price Index.

1. General.—An index of Melbourne wholesale prices was first computed in 1912. It relates chiefly to basic materials and foods weighted in accordance with consumption in the years immediately preceding that date. Neither the components of the list of items nor the weighting have been varied, except as indicated in footnote (a) to the following table. Consequently, the index is outmoded for current use but it has some historical significance as a measure of changes in the prices of its component items combined in the proportions in which they were in common use about the year 1910. It is now published on an annual basis for "All Groups" only and is used mainly as an approximate indication of long-term trends since the year 1861, for which it was first compiled. A description of the index and a list of the commodities included in it were published in *Labour Report* No. 38, 1949, pages 43-45.

2. **Index Numbers.**—Index numbers for each group of commodities as well as for all groups combined are shown in the following table:—

MELBOURNE WHOLESALE PRICE INDEX NUMBERS.

(Base of each Group: Year 1911 = 1,000.)

Year.	Metals and Coal.	Wool, Cotton, Leather, etc.	Agricultural Produce, etc.	Dairy Produce.	Groceries.	Meat.	Building Materials.	Chemicals.	All Groups.
1861	1,438	1,381	1,583	1,008	1,963	..	1,070	2,030	1,538
1871	1,096	1,257	1,236	864	1,586	..	1,044	1,409	1,229
1881	1,178	1,115	1,012	935	1,421	..	1,091	1,587	1,121
1891	895	847	1,024	995	1,032	888	780	1,194	945
1901	1,061	774	928	1,029	1,048	1,345	841	917	974
1911	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000
1921	2,173	1,361	1,767	2,000	1,977	2,158	2,733	2,303	1,903
1931	1,826	1,040	1,121	1,398	1,794	1,512	2,025	2,166	1,429
1941	1,960	1,402	1,721	1,554	1,883	1,776	3,138	2,527	1,796
1949	3,502	3,966	2,876	2,309	2,558	3,356	4,611	3,221	3,191
1950	3,902	5,464	3,155	2,459	2,829	4,616	(a)5,567	3,263	3,816
1951	5,080	7,943	4,512	2,930	2,850	6,438	(a)7,074	3,294	5,098
1952	6,481	7,365	5,038	4,024	3,455	6,289	(a)9,338	3,723	5,647
1953	6,615	6,950	4,958	4,533	3,767	6,303	(a)8,519	4,691	(b)5,631

(a) The list of items and weighting of the original Building Materials group of this index are outmoded in respect of recent years. The movement shown here for this group between 1949 and 1953 has been calculated in accordance with the movement occurring in the Building Materials group of the Basic Materials and Foodstuffs Index. (b) The "All Groups" index numbers for the years 1954, 1955, 1956, 1957, 1958 and 1959 were 5,384, 5,548, 5,916, 5,814, 5,575 and 5,394 respectively.

C. CONTROL OF PRICES DURING AND SINCE THE 1939-45 WAR.

1. **General.**—An account of the measures taken by the Commonwealth Government to control prices from September, 1939 (immediately after the outbreak of war), until 29th May, 1948 (the date of the Prices Referendum), was given in Official Year Book No. 37, pages 458-464.

2. **Transfer of Price Control to the States.**—Consequent upon the rejection of the proposal embodied in the Prices Referendum held on 29th May, 1948, that permanent power to control rents and prices (including charges) be conferred on the Commonwealth Government, responsibility for price fixation was assumed by the State Governments and steps were taken to pass State Prices Acts. These acts were proclaimed to operate simultaneously on 20th September, 1948. Except in the case of Queensland, each Act was to remain in force for a specific period, but the period varied from State to State.

On 20th September, 1948, each State Government issued declarations covering uniform lists of goods and services, which were brought under price control. Existing Commonwealth Prices Regulation Orders continued to apply to these goods and services until specially varied in accordance with the terms of the State legislation. At the same time, the Commonwealth Government issued an identical list of declared items to operate in the Australian Capital Territory and other Territories of the Commonwealth.

In the operation of State price control, the State Prices Commissioners collaborated closely. Conferences of Commissioners were held at intervals of approximately two months. Thus a large degree of uniformity was attained in controlling and decontrolling items and in the fixation of margins and prices of major items.

Since 1952, price control has been progressively modified in all States. General price control ceased in Western Australia on 31st December, 1953; in Tasmania on 31st October, 1954; in Victoria on 31st December, 1954; and in the Australian Capital Territory on 10th February, 1955. In New South Wales, general control of prices was suspended on 15th April, 1955, but was temporarily restored on some items from July, 1955 to September, 1956.

3. **Price Stabilization.**—Expenditure by the Commonwealth Government on price stabilization subsidies reached a peak in 1947-48 and since then the Commonwealth Government has progressively reduced the range of commodities eligible for subsidy.

In addition to those subsidies which had been an integral part of the Price Stabilization Plan, the Commonwealth Government paid bounties and subsidies for assistance to primary production, and these payments also had a stabilizing influence on prices.

For particulars of expenditure by the Commonwealth Government on price stabilization see Official Year Book No. 38, page 414 and for other subsidies and bounties, see Chapter XXI.—Public Finance.

D. WAGES.

§ 1. Arbitration and Wages Boards Acts and Associated Legislation.

1. **General.**—Particulars regarding the operation of Commonwealth and State Laws for the regulation of wages, hours and conditions of labour were first compiled for the year 1913, and revised particulars have appeared annually in the *Labour Report* and in issues of the Official Year Book prior to No. 38.

2. **Commonwealth.**—Under placitum (xxxv) of section 51 of the Commonwealth of Australia Constitution, the Commonwealth Parliament is empowered to make laws with respect to "conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State". The Parliament has made such a law, namely the Conciliation and Arbitration Act.

This Act defines an "industrial dispute" as "(a) A dispute (including a threatened, impending or probable dispute) as to industrial matters which extends beyond the limits of any one State; and (b) a situation which is likely to give rise to a dispute as to industrial matters which so extends; and includes—(c) such a dispute in relation to employment in an industry carried on by, or under the control of, a State or an authority of a State; (d) a dispute in relation to employment in an industry carried on by, or under the control of, the Commonwealth or an authority of the Commonwealth, whether or not the dispute extends beyond the limits of any one State; and (e) a claim which an organization is entitled to submit to the Commission under section eleven A of the *Public Service Arbitration Act 1920-1959* or an application or matter which the Public Service Arbitrator has refrained from hearing, or from further hearing, or from determining under section fourteen A of that Act, whether or not there exists in relation to the claim, application or matter a dispute as to industrial matters which extends beyond the limits of any one State."

The Conciliation and Arbitration Act was extensively amended by an Act (No. 44 of 1956) assented to on 30th June, 1956. This amendment altered the structure of the arbitration machinery by separating the judicial functions from the conciliation and arbitration functions. The Commonwealth Industrial Court was established to deal with judicial matters under the Act and the Commonwealth Conciliation and Arbitration Commission to handle the functions of conciliation and arbitration. Further amendments were made by Act No. 103 of 1956, Act No. 30 of 1958 and Act No. 40 of 1959. A summary of the provisions of the Conciliation and Arbitration Act 1904-1959 is given in the following paragraphs.

The Commonwealth Industrial Court is composed of a Chief Judge and not more than two other Judges. The Commonwealth Conciliation and Arbitration Commission comprises a President, not less than two Deputy Presidents, a Senior Commissioner, not less than five Commissioners and a number of Conciliators. Judges of the Commonwealth Court of Conciliation and Arbitration were made either members of the Commonwealth Industrial Court or presidential members of the Commonwealth Conciliation and Arbitration Commission. Conciliation Commissioners became non-presidential members of the Commission.

The jurisdiction of the Commonwealth Industrial Court shall be exercised by not less than two Judges, except in the following circumstances. A single Judge may exercise the jurisdiction of the Court with respect to the dismissal or injury of an employee on account of industrial action, interpretation of awards, questions concerning eligibility of membership of an organization, disputes between an organization and its members and a prescribed matter of practice or procedure. A single Judge may refer a question of law for the opinion of the Court constituted by not less than two Judges. The Court is a Superior Court of Record with the same power to punish contempts of its power and authority as is possessed by the High Court. In general, decisions of the Industrial Court are final; however, an appeal lies to the High Court but only when the latter grants leave to appeal. The Act provides for the registration of associations of employees and employers and for inquiries to be held concerning disputed elections in organizations; and certain powers in connexion therewith are, by the Act, given to the Industrial Court. Provision is also made for the Commission to exercise the powers of the Court with regard to an application for cancellation of registration of an organization. Any such change of jurisdiction must be notified by proclamation. This provision could be used if the powers of the Court in this regard were declared, in whole or in part, to be invalid.

Special provision was also made concerning the right of audience before the Commonwealth Industrial Court. Briefly, except in proceedings which, in general, involve questions of law or offences against the Act, parties are able to elect whether to

appear personally or to be represented by lawyers or officials. Even in proceedings involving questions of law, except appeals from decisions by other Courts to the Industrial Court, on matters arising under this Act or the Public Service Arbitration Act 1920-1959, the parties may, if they wish and the Court grants leave, be represented by officials.

The Commonwealth Conciliation and Arbitration Commission is empowered to prevent or settle industrial disputes by conciliation or arbitration, and to make suggestions and to do such things as appear right and proper for (a) effecting a reconciliation between parties to industrial disputes; (b) preventing and settling industrial disputes by amicable agreement; and (c) preventing and settling, by conciliation or arbitration, industrial disputes not prevented or settled by amicable agreement. The Commission may exercise its powers of its own motion or on the application of a party.

The President may assign a Commissioner to deal with industrial disputes relating to particular industries, or members of the Commission to deal with a particular industrial dispute. However, subject to the approval of the President, it is the duty of the Senior Commissioner to organize and allocate the work of the Commissioners and Conciliators.

When an industrial dispute occurs or is likely to occur, a Commissioner shall take steps for the prompt prevention or settlement of that dispute by conciliation or, if in his opinion conciliation is unlikely to succeed or has failed, by arbitration. A Commissioner may arrange with the Senior Commissioner for a Conciliator to assist the parties to reach an amicable agreement and shall do so if the parties so request. If an agreement is reached, a memorandum of its terms shall be made in writing, and may be certified by the Commission. A certified memorandum shall have the same effect as an award.

The Commission in Presidential Session, that is, the Commission constituted by at least three presidential members nominated by the President and not otherwise, is empowered to deal with making awards, or certifying agreements, in so far as they concern standard hours, basic wages and long-service leave.

Upon application by a party to an industrial dispute, a Commissioner shall consult with the President as to whether in the public interest any matter in dispute should be dealt with by a Commission constituted by not less than three members nominated by the President, at least one of whom shall be a presidential member and one, where practicable, the Commissioner concerned. The President may direct the Commission to hear the matter in dispute; however, after consideration the Commission may refer the matter in dispute back for determination to the Commissioner originally dealing with the dispute.

An appeal against the decision of a Commissioner shall be heard by not less than three members nominated by the President, of whom at least two shall be presidential members of the Commission. However, an appeal will not be heard unless the Commission considers it is necessary as a matter of public interest. The President, after taking account of the views of the parties to a dispute, may appoint a member of the Commission to take evidence on behalf of the full bench of the Commission, so that the full bench can have this evidence before it when it commences its hearing.

Full benches of the Commission not constituted by the same persons may sit in joint session at the direction of the President when he considers it desirable and has the opinion that a question is common to the matters before those benches. A joint session may be held whether the benches concerned are constituted pursuant to the Conciliation and Arbitration Act or the Public Service Arbitration Act, and whether they are constituted to hear references or appeals. However, it is left to each appropriate full bench to determine any of the matters before it.

Provision is also made in the Act for a presidential member of the Commission to handle industrial matters in connexion with the Maritime Industries, Snowy Mountains Area and Stevedoring Industry, except in those matters for which the Act requires that the Commission shall be constituted by more than one member.

The Commonwealth Conciliation and Arbitration Commission also deals with disputes and industrial matters, interstate or intra-state, associated with undertakings or projects of the Commonwealth Government which have been declared by the Minister to be Commonwealth projects for the purposes of this Act. In effect, this places employees of Commonwealth projects, so declared, under the jurisdiction of the Commission. The Minister has the power to exempt certain persons or classes of persons working on these projects from the jurisdiction of the Commission.

The Commission may make an award in relation to an industrial dispute concerning employees of a Commonwealth project or when the Public Service Arbitrator refrains from dealing with claims made by a Public Service employee organization or consents to the claims being presented to the Commission, though such an award may be inconsistent with a law

of the Commonwealth relating to salaries, wages, rates of pay or terms or conditions of service of employees in the Public Service as defined by section 3 of the Public Service Arbitration Act 1920-1959, not being the Commonwealth Employees' Compensation Act 1930-1959, the Commonwealth Employees' Furlough Act 1943-1959, the Superannuation Act 1922-1959 or any other prescribed Act.

The Act provides that where a State law, or an order, award, decision or determination of a State industrial authority is inconsistent with or deals with a matter dealt with in an award of the Commission, the latter shall prevail, and the former, to the extent of the inconsistency or in relation to the matter dealt with, shall be invalid.

For further particulars regarding Commonwealth arbitration legislation see the annual *Labour Report*.

3. *States*.—In each State, Industrial Tribunals have been established to regulate and arbitrate in industrial matters. The chief of these are the Industrial Commission of New South Wales, the Industrial Courts of Queensland and South Australia, and the Western Australian Court of Arbitration, together with Wages Boards for specific industries or occupations which operate in Victoria, South Australia and Tasmania. Further details concerning the functions and powers of these authorities may be found in the *Labour Report*.

§ 2. Rates of Wage and Hours of Work.

1. *General*.—This section contains new indexes (with base year 1954 = 100) of minimum weekly and hourly rates of wage and standard hours of work for adult males and adult females for Australia and each State. In the new indexes there are 16 industrial groups for adult males and 8 industrial groups for adult females. For relevant periods the new indexes replace cognate indexes (Base: Year 1911 = 1,000 for males and April, 1914 = 1,000 for females) published in previous issues. Pending further investigation there is no new index for the rural group.

The overall trends of the old and new indexes (excluding rural industry) show comparatively little divergence from each other, except in the mining and building groups, for which the basis of measuring wage rates was changed in the new indexes.

The old indexes were the unweighted averages of selected occupations for each industry. The aggregate indexes combined these industry indexes by using industry weights current in or about 1911. The new indexes are based on the occupation structure existing in 1954. Weights for each industry and each occupation were derived from two sample surveys made in that year. The first was the Survey of Awards in April, 1954, which showed the number of employees covered by individual awards, determinations and agreements. This provided employee weights for each industry as well as a basis for the Survey of Award Occupations made in November, 1954. This second survey showed the number of employees in each occupation within selected awards, etc., thereby providing occupation weights.

In addition to the improved weighting, some desirable changes have been made in the industry classification used. The Miscellaneous group in the old index has been dissected into two component industry groups "Wholesale and Retail Trade", and "Public Administration and Professional". Two new groups, "Communication" and "Amusement, Sport and Recreation", have been included. The "Domestic" part of the Domestic, Hotels, etc. group has been omitted because of coverage difficulties. The former Pastoral, Agricultural, etc. group is not yet included in the new index. Further data are being sought for this industry.

The minimum wage rates and standard hours of work used in the new indexes are for representative occupations within each industry. They have been derived entirely from representative awards, determinations and agreements in force at the end of each quarter, commencing with 31st March, 1939 for adult males and 31st March, 1951 for adult females. The index for adult males includes rates and hours for 3,393 award designations. However, as some of these designations are operative within more than one industry, or in more than one State, the total number of individual award occupations is 2,301. For adult females the corresponding numbers are 1,120 and 522. Using the industry and occupation weights derived from the surveys described above, these rates and hours were combined to give weighted averages for each industrial group for each State and Australia.

The indexes are designed to measure movements in prescribed minimum rates of "wages" as distinct from "salaries". Consequently, awards, etc., relating solely or mainly to salary earners are excluded.

A more detailed description of the new indexes of minimum rates of wage and standard hours of work is given in *Labour Report* No. 47, 1959, which also contains an extensive tabular presentation of the minimum rates of wage for adult males and females in the principal occupations in the capital city of each State.

2. **Weekly Wage Rates.**—(i) *Adult Males—States.* The following table shows, for each State and Australia, the weighted average minimum weekly rates of wage payable to adult male workers at the dates specified:—

3. **Hourly Wage Rates.**—(i) *General.* The average rates of wage in the preceding tables are based on the minimum rates prescribed for selected occupations in awards, etc., for a full week's work, excluding overtime. However, the number of hours constituting a full week's work differs in some instances between various occupations in each State, and between the same occupations in the several States. For some purposes a better comparison may be obtained by reducing the results in the preceding paragraphs to a common basis, namely, the rate of wage per hour. The particulars of weighted average minimum hourly rates of wage given in the following tables relate to all industrial groups except Rural and Shipping and Stevedoring. The Rural industry is not yet included in the new index and Shipping and Stevedoring has been excluded because, for some of the occupations in this group, definite particulars for the computation of average working hours and hourly rates of wage are not available.

(ii) *Adult Males—States.* The following table shows the weighted average minimum hourly rates of wage payable to adult male workers in each State at the dates specified.

5. "Real" Wage Rates.—Pending further investigation, the particulars of "real" wage rates, previously published, have been omitted from this issue.

§ 3. Average Weekly Wage Earnings.

1. **Average Weekly Total Wages Paid and Average Earnings, All Industries.**—The following figures are derived from employment and wages recorded on Pay-roll Tax returns (which cover approximately 73 per cent. of the estimated number of civilian wage and salary earners in employment), from other direct collections and from estimates of the unrecorded balance. Pay of members of the Defence Forces is not included. The figures are not seasonally adjusted, but a seasonally adjusted quarterly index of average weekly wage earnings is shown in para. 2 below. Corresponding figures for each quarter are published in the *Monthly Review of Business Statistics*, the *Monthly Bulletin of Employment Statistics* and the *Digest of Current Economic Statistics*.

AVERAGE WEEKLY TOTAL WAGES PAID AND AVERAGE EARNINGS.(a)

Year.	N.S.W. (b)	Vic.	Q'land.	S. Aust. (c)	W. Aust.	Tas.	Aust.
-------	---------------	------	---------	-----------------	----------	------	-------

AVERAGE WEEKLY TOTAL WAGES PAID.

(£'000.)

1953-54	16,480	11,767	5,227	3,615	2,754	1,305	41,148
1954-55	17,970	12,901	5,601	3,940	2,928	1,399	44,739

1957-58	21,664	15,510	6,585	4,635	3,284	1,671	53,349
1958-59	22,414	16,240	6,970	4,823	3,347	1,725	55,519

AVERAGE WEEKLY EARNINGS PER EMPLOYED MALE UNIT.(d)

(£.)

1953-54	16.69	16.64	14.98	15.87	15.59	15.78	16.26
1954-55	17.64	17.59	15.58	16.83	16.11	16.54	17.13
1955-56	18.92	18.78	16.49	17.88	16.92	17.75	18.28
1956-57	19.89	19.70	17.50	18.28	17.48	18.79	19.16
1957-58	20.44	20.22	17.94	18.68	18.05	18.95	19.67
1958-59	21.04	20.69	18.64	19.10	18.19	19.33	20.19

(a) Includes salaries. (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. The same ratio has been used in each State, and because the average ratio of female to male earnings may vary between States, precise comparisons between average earnings in different States cannot be made on the basis of the figures above.

2. **Average Weekly Wage Earnings Index Numbers.**—The following table shows, for "All Industries" and for "Manufacturing", the movement in average weekly wage earnings from 1947-48 to the March Quarter, 1960. The "All Industries" index is based on Pay-roll Tax returns and other data. The index for manufacturing industries for the years 1947-48 to 1958-59 is based on the average earnings of male wage and salary earners employed in factories as disclosed by annual factory censuses (*see* Chapter VI.—Manufacturing Industry, § 8, para. 2 (iii)); figures subsequent to June, 1959 are preliminary estimates based on Pay-roll Tax returns.

The index numbers show for "All Industries" and "Manufacturing" the movement in average earnings over a period of time. However, they do not give, at any point of time, a comparison of actual earnings in the two groups. The base of each series is the year 1953-54 = 100 and both series have been seasonally adjusted. The series shown herein, with base 1953-54 = 100, replace the series with base 1945-46 = 1000, published in previous issues.

AVERAGE WEEKLY WAGE EARNINGS^(a) INDEX NUMBERS: AUSTRALIA.

NEW SERIES (SEASONALLY ADJUSTED).

(Base of each Series: 1953-54 = 100.)

Year.	All Industries. ^(b)	Manufacturing.	Quarter.	All Industries. ^(b)	Manufacturing.
1947-48..	47.5	48.0	1957-58—Sept.	120.2	119.8
1948-49..	53.9	54.3	Dec.	121.5	122.1
1949-50..	59.3	60.0	March	121.3	122.3

1958-59..	124.4	125.5	March	135.3	136.5

(a) Includes salaries. (b) Average earnings per male unit employed. Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings.

§ 4. Basic Wages in Australia.

1. General.—The concept of a "basic" or "living" wage is common to rates of wage determined by industrial authorities in Australia. Initially the concept was interpreted as the "minimum" or "basic" wage necessary to maintain an average employee and his family in a reasonable state of comfort. However, it is now generally accepted "that the wage should be fixed at the highest amount which the economy can sustain and that the 'dominant factor' is the capacity of the community to carry the resultant wage levels."*

Under the Commonwealth Conciliation and Arbitration Act 1904-1959 (*see* page 416), the Commonwealth Conciliation and Arbitration Commission (previously the Commonwealth Court of Conciliation and Arbitration) may, for the purpose of preventing or settling an industrial dispute extending beyond the limits of any State, make an order or award "altering the basic wage (that is to say, that wage or that part of the wage, which is just and reasonable for an adult male [female], without regard to any circumstance pertaining to the work upon which, or the industry in which he [she] is employed) or the principles upon which it is computed".

In the past, the Commonwealth Court of Conciliation and Arbitration held *genera* basic wage inquiries from time to time and its findings applied to industrial awards within its jurisdiction. Prior to the decision of the Commonwealth Court of Conciliation and Arbitration, announced on 12th September, 1953, discontinuing the automatic adjustment of basic wages in Commonwealth awards in accordance with variations occurring in retail price index numbers, the relevant basic wage of the Commonwealth Court of Conciliation and Arbitration was adopted to a considerable extent by State Industrial Tribunals. In New South Wales and South Australia, the State industrial authorities adopted the relevant Commonwealth basic wage. In Victoria and Tasmania, where the Wages Boards systems operate, no provision was included in the industrial Acts for the declaration of a basic wage, although, in the past, Wages Boards generally adopted basic wages based on those of the Commonwealth Court. In Queensland and Western Australia, the determination of a basic wage is a function of the respective State Industrial or Arbitration Courts and (subject to State law) they took into account the rates determined by the Commonwealth Court.

* Commonwealth Arbitration Reports, Vol. 77, p. 494.

Following the decision of the Commonwealth Court of Conciliation and Arbitration to discontinue automatic quarterly adjustments to the basic wage, the various State industrial authorities have determined State basic wages in accordance with the provisions of their respective State industrial legislation. Details of the action taken in each State and subsequent variations in State basic wages are set out in para. 5 (*see pp. 441-5*).

In addition to the basic wage, "secondary" wage payments, including margins for skill, loadings and other special considerations peculiar to the occupations or industry, are determined by these authorities. The basic wage, and the "secondary" wage, where prescribed, make up the "minimum" wage for a particular occupation. The term "minimum wage" as distinct from the basic wage is used currently to express the lowest rate payable for a particular occupation or industry.

2. The Commonwealth Basic Wage.—(i) *Early Judgments.* The principle of a living or basic wage was propounded as far back as 1890 but it was not until 1907 that a wage, as such, was declared by a Court in Australia. The declaration was made by way of an order in terms of section 2 (d) of the Excise Tariff 1906 in the matter of an application by H. V. McKay that the remuneration of labour employed by him at the Sunshine Harvester Works, Victoria, was "fair and reasonable". Mr. Justice Higgins, President of the Commonwealth Court of Conciliation and Arbitration, defined the standard of a "fair and reasonable" minimum wage for unskilled labourers as that standard appropriate to "the normal needs of the average employee, regarded as a human being living in a civilized community".* The rate declared was 7s. a day or £2 2s. a week for Melbourne, the amount considered reasonable for "a family of about five".

The "Harvester" standard was adopted by the Commonwealth Court of Conciliation and Arbitration for incorporation in its awards, and practically the same rates continued until 1913, when the Court took cognizance of retail price index numbers, covering food and groceries and rent of all houses ("A" Series) for the 30 more important towns of Australia, which had been published by the Commonwealth Statistician for the first time in the preceding year. The basic wage rates for towns were thereafter varied in accordance with the respective retail price index numbers. Court practice was to equate the retail price index number 875 for Melbourne for the year 1907 to the "Harvester" rate of 42s. a week (or the base of the index (1,000) to 48s. a week). At intervals thereafter as awards came before it for review, the Court usually revised the basic wage rate of the award in proportion to variations in the retail price index. In some country towns, certain "loadings" were added by the Court to wage rates so derived to offset the effect of lower housing standards, and consequently of house rents, on the index numbers for these towns.

Over the period of its operation, the adequacy or otherwise of the "Harvester" standard was the subject of much discussion, the author of the judgment himself urging on several occasions the need for its review. During the period of rapidly rising prices towards the end of the 1914-18 War, strong criticism developed that this system did not adequately maintain the "Harvester" equivalent. A Royal Commission was appointed in 1919 to inquire as to what it would actually cost a man, wife and three children under fourteen years of age to live in a reasonable standard of comfort, and as to how the basic wage might be automatically adjusted to maintain purchasing power. The Commission's Reports were presented in 1920 and 1921. An application by the unions to have the amounts arrived at by the inquiry declared as the basic wage was not accepted by the Court because they were considerably in advance of existing rates and grave doubts were expressed by members of the Court as to the ability of industry to pay such rates. Further details of the recommendations of the Commission were given in *Labour Report* No. 41, page 102.

The system of making automatic quarterly adjustments to the basic wage in direct ratio to variations in the retail price index ("A" Series) was first introduced in 1921. The practice then adopted was to calculate the adjustments to the basic wage quarterly on the index number for the preceding quarter. Previously, adjustments had been made sporadically in relation to retail price indexes for the previous calendar year or the year ended with the preceding quarter. The practice adopted by the Commonwealth Court in 1921 of making automatic quarterly adjustments continued until the Court's judgment of 12th September, 1953 (*see page 431*).

* *Commonwealth Arbitration Reports*, Vol. 2, p. 3.

In 1922, an amount known as the "Powers' 3s." was added by the Court as a general "loading" to the weekly basic wage for the purpose of maintaining, during a period of rising prices, the full equivalent of the "Harvester" standard. This loading continued until 1934.

(ii) *Basic Wage Inquiries, 1930-31, 1932, 1933.* No change was made in the method of fixation and adjustment of the basic wage until the onset of the depression, which began to be felt severely during 1930. Applications were then made to the Court for some greater measure of reduction of wages than that which resulted from the automatic adjustments due to falling retail prices. The Court held a general inquiry, and, while declining to make any change in the existing method of calculating the basic wage, reduced all wage rates under its jurisdiction by 10 per cent. from 1st February, 1931. In June, 1932, the Court refused applications by employee organizations for the cancellation of the 10 per cent. reduction in wage rates. In May, 1933, the Court again refused to cancel the 10 per cent. reduction in wage rates, but decided that the existing method of adjustment of the basic wage in accordance with the "A" Series retail price index number had resulted in some instances in a reduction of more than 10 per cent. In order to rectify this, the Court adopted the "D" Series of retail price index numbers for future quarterly adjustments of the basic wage.

Particulars of the 1930-31 and the 1932 Inquiries may be found in *Labour Report* No. 22, pages 45-48 and of the 1933 Inquiry in *Labour Report* No. 23, pages 45-46.

(iii) *Basic Wage Inquiry, 1934.* A summary of the judgment delivered on 17th April, 1934, was given in *Official Year Book* No. 29, page 545. Until this judgment the "Harvester" standard, adjusted by variations in retail price index numbers, continued to be the theoretical basis of the wage of the Commonwealth Court. The new rate for the six capital cities was in effect the same as that previously paid under the "A" Series, without the "Powers' 3s." and without the 10 per cent. reduction, which then ceased to operate.

Automatic quarterly adjustment of the basic wage was transferred from the "A" and the "D" Series to the "C" Series Retail Price Index. The base of the index (1,000) was taken by the Court as equal to 81s. a week. This gave rates as declared on this occasion for the capital cities on the basis of their respective index numbers ranging from 61s. for Brisbane to 67s. for Sydney and Hobart, the average wage for the six capital cities being 65s.

(iv) *Basic Wage Inquiry, 1937.* In May, 1937, the Commonwealth Court heard an application by the combined unions for an increase in the basic wage. The unions asked that the equivalent of the base (1,000) of the "C" Series Index be increased from 81s. to 93s., which on index numbers then current would have represented an average increase of about 10s. a week. The chief features of the judgment delivered on 23rd June were:—

(a) Amounts were added to the basic wage not as an integral, and therefore adjustable, part of that wage, but as "loadings" additional to the rates payable under the 1934 judgment, which were referred to in the judgment as the "needs" portion of the total resultant basic wages. These loadings, commonly referred to as "Prosperity" loadings, ranged, for capital cities, from 4s. to 6s., that for the six capitals being 5s.

(b) The basis of the adjustment of the "needs" portion of the wage in accordance with the variations shown by retail price index numbers was transferred from the "C" Series to a special "Court" Series based upon the "C" Series (see page 403).

(c) Female and junior rates were left for adjustment by individual Judges when dealing with specific awards.

The main parts of the judgment were reprinted in *Official Year Book* No. 30, pages 564-75 and in *Labour Report* No. 28, pages 77-87.

(v) *Basic Wage Inquiry, 1940.* On 5th August, 1940, the Full Court commenced the hearing of an application by the combined unions for an increase in the existing basic wage by raising the value of 1,000 (the base of the "C" Series Index upon which the "Court" Series was based) from 81s. to 100s. a week, and the incorporation of the existing

"Prosperity" loadings in the new rate mentioned. In its judgment of 7th February, 1941, the Court unanimously refused to grant any increase, owing mainly to the uncertainty of the economic outlook under existing war conditions. The application was stood over for further consideration. (*See* (vi) following.)

The Chief Judge stated: "The Court has always conceded that the 'needs' of an average family should be kept in mind in fixing a basic wage. But it has never, as the result of its own inquiry, specifically declared what is an average family, or what is the cost of a regimen of food, clothing, shelter and miscellaneous items necessary to maintain it in frugal comfort, or that a basic wage should give effect to any such finding. In the end economic possibilities have always been the determining factor . . . what should be sought is the independent ascertainment and prescription of the highest basic wage that can be sustained by the total of industry in all its primary, secondary and ancillary forms".*

The Chief Judge also suggested that the more logical system would be to grade the basic wage according to family responsibilities by means of a comprehensive system of child endowment, and that if a scheme of this nature were established, future fixations of the basic wage would be greatly simplified. (The Commonwealth Child Endowment Act came into operation on 1st July, 1941. For details *see* Chapter XVIII.—Welfare Services.)

(vi) "*Interim Basic Wage Inquiry*, 1946. As the result of (a) an application made by the Commonwealth Attorney-General for the restoration to the Full Court List of certain adjourned 1940 basic wage applications (*see* (v) above), (b) a number of fresh cases which had come to the Court since 1941, and (c) an application by the combined unions for an "interim" basic wage declaration, the Court commenced the hearing of this case on 25th November, 1946. Judgment was delivered on 13th December, 1946 whereby an increase of 7s. a week was granted in the "needs" portion of the basic wage then current, the rate for the six capital cities as a whole being increased from 93s. to 100s. a week. For automatic quarterly adjustments a new "Court" Index (Second Series) (Base 1923-27 = 87.0) was adopted. All "loadings" on the basic wage were retained. Further particulars of this judgment may be obtained from *Labour Report* No. 38, page 79.

(vii) *Basic Wage Inquiry*, 1949-50. This finalized the case begun in 1940 and continued in 1946 (*see* above). In 1946, during the hearing of the Standard Hours Inquiry and following the restoration to the Full Court List of applications for an increased basic wage, the Chief Judge ruled that the claim for an increase in the basic wage should be heard concurrently with the "40-hour week" claims then before the Court. The unions, however, objected to this course being followed, and, on appeal to the High Court, that Court in March, 1947, gave a decision which resulted in the Arbitration Court proceeding with the "Hours" Case to its conclusion.

The Basic Wage Inquiry, 1949-50, finally opened in February, 1949, and the general hearing of the unions' claims was commenced on 17th May, 1949. Separate judgments were delivered on 12th October, 1950;† in the judgments, which were in the nature of general declarations, a majority of the Court (Foster and Dunphy JJ.) was of the opinion that the basic wage for adult males should be increased by £1 a week, and that for adult females should be 75 per cent. of the adult male rate. Kelly C.J., dissenting, considered that no increase in either the male or the female wage was justified.

The Court on 24th October and 17th and 23rd November, 1950, made further declarations concerning the "Prosperity" and other loadings. The "Prosperity" loading of 1937 (*see* page 429), which was being paid at rates of between 3s. and 6s. a week according to localities, was standardized at a uniform rate of 5s. a week for all localities and was declared to be an adjustable part of the basic wage, the "War" loadings were declared to be not part of the basic wage, and any other loading declared to be part of the basic wage ceased to be paid as a separate entity.

The new rates operated from the beginning of the first pay-period in December, 1950, in all cases being the rate based on the Court Index (2nd Series) for the September quarter, 1950 plus a flat-rate addition of £1, together with the standardized "Prosperity" loading of 5s. The new basic wage rate for the six capital cities (weighted average) was £8 2s. comprising £6 17s. Court (2nd Series) plus 5s. uniform "Prosperity" loading plus the £1 addition.

* *Commonwealth Arbitration Reports*, Vol. 44, pp. 47-8.

† 68 C.A.R., p. 698.

The declaration provided that the whole of this basic wage would be subject to automatic quarterly adjustments as from the beginning of the first pay-period commencing in February, 1951, on the basis of the index numbers for the December quarter, 1950. For this purpose the new rate of £8 2s. was equated to the "C" Series retail price index number 1572 for the six capital cities (weighted average) for the September quarter, 1950. From this equation was derived a new "Court" Index (Third Series) with 103.0 equated to 1,000 in the "C" Series Index.

The basic wage rates operative from the beginning of the first pay-period commencing in December, 1950 were as follows (rates operative in November, 1950 in parentheses):—Sydney, £8 5s. (£7 6s.); Melbourne, £8 2s. (£7 3s.); Brisbane, £7 14s. (£6 15s.); Adelaide, £7 18s. (£6 17s.); Perth, £8 (£6 19s.); Hobart, £8 (£6 19s.); Six Capitals, £8 2s. (£7 2s.). Further particulars of the judgment may be found in *Labour Report* No. 39, page 81.

(viii) *Basic Wage and Standard Hours Inquiry*, 1952–53. On 5th August, 1952, the Commonwealth Court of Conciliation and Arbitration began hearing claims by—

- (1) The Metal Trades Employers' Association and other employers' organizations that (a) the basic wage for adult males be reduced; (b) the basic wage for adult females be reduced; (c) the standard hours of work be increased; (d) the system of adjusting the basic wages in accordance with variations occurring in retail price index numbers be abandoned.
- (2) The Metal Trades Federation, an association of employees' organizations, that the basic wage for adult males be increased, which would also have resulted in increasing the amount, though not the proportion it bore to the basic wage for adult males, of the basic wage for adult females.

A number of Governments, organizations and other bodies obtained leave to intervene and in this role the Australian Council of Trade Unions supported the claims of the Metal Trades Federation.

The decision of the Court, announced on 12th September, 1953, was as follows:—the employers' applications for reduction of the basic wages for adult males and females and for an increase of the standard hours of work were refused; the employers' applications for omission or deletion of clauses or sub-clauses providing for the adjustment of basic wages were granted; and the unions' applications for increases of basic wages were refused.

The Court in the course of its judgment said that nothing had been put before it during the inquiry in support of a departure from its well-established principle that the basic wage should be the highest that the capacity of the community as a whole could sustain. If the Court is at any time asked to fix a basic wage on a true needs basis, the question of whether such a method is correct in principle and all questions as to the size of the family unit remain open.

In order to remove certain misconceptions about its function, the Court stated that it was neither a social nor an economic legislature, and that its function under section 25 of the Act was to prevent or settle specific industrial disputes. However, these must be settled upon terms which seem just to the Court, having regard to conditions which exist at the time of its decision.

The Court intimated that time would be saved in future inquiries if the parties to the disputes, in discussing the principle of the "capacity to pay", directed their attention to the broader aspects of the economy, as indicated by a study of employment, investment, production and productivity, overseas trade, overseas balances, the competitive position of secondary industry and retail trade.

In accordance with its decision to abolish the automatic adjustment clause from its awards, the Court, commencing on 21st October, 1953, amended all awards listed before it as a result of applications by one of the parties to the awards. Afterwards the Court, on its own motion under section 49 of the Commonwealth Conciliation and Arbitration Act, listed those awards not the subject of an application by one of the parties and then proceeded to delete the clauses providing for the automatic adjustment of the basic wage.

The power of the Commonwealth Court of Conciliation and Arbitration to vary awards not the subject of an application by one of the parties was unsuccessfully challenged in the High Court of Australia.

For further particulars of the judgment see *Labour Report* No. 46, page 64.

(ix) *Basic Wage Inquiry*, 1956. On 14th February, 1956 the Commonwealth Court of Conciliation and Arbitration commenced hearing an application by the Amalgamated Engineering Union and others made by summons for alteration of the basic wage prescribed in the Metal Trades award in the following respects:—namely, for an increase in the basic wage to the amount it would have reached if automatic quarterly adjustments deleted by the Court in September, 1953 had remained in force; an increase of a further £1 in the basic wage; the re-introduction of automatic quarterly adjustments; and the abolition of what is known as the 3s. country differential. This application was regarded as a general application for variation of the basic wage in all awards of the Commonwealth Court of Conciliation and Arbitration.

All the claims made by the unions were opposed by the respondent employers. The Commonwealth Government appeared not as a party to the dispute but in the public interest and supplied much factual and statistical material in a review of the economy from 1953. However, the Commonwealth opposed the re-introduction of automatic adjustments. The States of New South Wales, Queensland, Western Australia and Tasmania supported the unions' claims for the re-establishment of the system of automatic adjustments and the raising of the basic wage to the levels indicated by the current "C" Series index numbers, but the State of South Australia opposed these claims. The State of Victoria neither supported nor opposed the unions' claims.

The judgment was delivered on 26th May, 1956. The Court rejected each claim made by the unions but decided to increase the adult male basic wage by 10s. a week, payable from the beginning of the first pay-period in June. As a result of this decision, the basic wage for adult females was increased by 7s. 6d. a week with proportionate increases for juniors of both sexes and for apprentices.

The Court took the view that its decision in 1953 to abandon the system of quarterly adjustments was clearly right and that "so long as the assessment of the basic wage is made as the highest which the capacity of the economy can sustain, the automatic adjustment of that basic wage upon price index numbers cannot be justified, since movements in the index have no relation to the movements in the capacity of the economy".* The Court was satisfied "that a basic wage assessed at the highest amount which the economy can afford to pay cannot in any way be arrived at on the current price of listed commodities. There is simply no relationship between the two methods of assessment".†

"The Court's examination of the economy and its indicators—employment, investment, production and productivity, overseas trade, overseas balances, the competitive position of secondary industry and retail trade—and its consideration of inflation and its possible disastrous extension has led to the Court's conclusion that the nation now has not the capacity to pay a basic wage of the amount to which automatic quarterly adjustments would have brought it".‡

In the course of setting out the reasons for its decision the Court considered the period over which the capacity of the economy should be assessed, and concluded: "A year has been found almost universally to be a sensible and practicable period for such a purpose in the case of trading institutions the world over. The Court considers—fortified by the Judges' experience of considering from time to time Australia's capacity—that a yearly assessment of the capacity of Australia for the purpose of fixing a basic wage would be most appropriate. We would encourage any steps to have the Court fulfil such a task each year . . .".§

For further details see *Labour Report* No. 46, page 67.

(x) *Basic Wage Inquiry*, 1956–57. On 13th November, 1956 the Commonwealth Conciliation and Arbitration Commission in Presidential Session commenced to hear claims for alteration of the basic wage prescribed in the Metal Trades Award. The claims made were as follows:—

1. "For the increase of the basic wage in all its manifestations to the amount it would have reached if there had remained in the award provisions for automatic quarterly adjustments, which had been deleted in September, 1953"

* *Commonwealth Arbitration Reports*, Vol. 84, p. 175.

† *Ibid.*, p. 176.

‡ *Ibid.*, p. 177.

2. " For the re-insertion in the award of the provisions for the automatic quarterly adjustment of the basic wage"*

In accordance with past practice this application in respect of the Metal Trades Award was treated by the Commission as a general application for alteration of the basic wage in all Federal awards.

The unions claims were opposed by the respondent employers. The Australian Council of Salaried and Professional Associations intervened in support of the applicant unions. Victoria and South Australia were the only States to appear before the Commission and the Attorney-General of the Commonwealth intervened in the public interest.

Victoria neither supported nor opposed the application by the unions. South Australia opposed the unions' claims and suggested that, if an increase in the basic wage were granted, the Commission should decide on the increase to be added to the six capitals basic wage and then apportion that increase amongst the six capital cities on a basis accurately reflecting the differences in their cost of living.

The Commonwealth opposed the restoration of the automatic adjustment system, whatever index were used for this purpose.

The Commission decided that before it could reach a decision it would have to examine, in detail, three main issues, namely: (i) should the system of automatic adjustment be restored? (ii) should there be an increase in the basic wage, and, if so, of what amount? and (iii) should the increase, if there be one, be of a uniform amount, or should it be variable as between capital cities?

(i) *Should the System of Automatic Adjustment be Restored?* After hearing submissions by counsel for the unions that automatic quarterly adjustments of the basic wage should be restored and argument as to the appropriateness of using the "C" Series index for this purpose, the Commission reaffirmed the decision of the Court in 1953, which, it said, "was primarily based on the view that there is no justification for automatically adjusting in accordance with a price index a wage assessed as the highest that the capacity of the community as a whole can sustain."† Accordingly, the claim for restoration of automatic quarterly adjustments was refused.

(ii) *Should there be an Increase in the Basic Wage and, if so, of what Amount?* The Commission reaffirmed the principles used to determine the basic wage in the 1953 and 1956 judgments of the Court and accepted as correct the decision of the Court in 1956 to increase the then existing basic wages by 10s. This led the Commission to a comparison of the state of the national economy at the time of the 1956 and 1957 basic wage inquiries.

The Commission, having considered all aspects of the state of the economy, decided that the basic wages in Federal awards should be increased and that the increase to the six capital cities basic wage should be 10s. a week for adult males.

(iii) *Should the Increase be of a Uniform Amount?* The historical background of differential rates of basic wage for respective cities and towns was examined by the Commission and it acknowledged that the Federal basic wage had two components. The first and greater component differed for each capital city and represented a rate of wage calculated by the use of "C" Series retail price index numbers for the June quarter, 1953 and the second component, common to all places, was the uniform 10s. awarded by the Court in 1956.

On the question of whether the increase should be of a uniform amount the alternative open to the Commission appeared to be either to follow what the Court did in 1956, or to recalculate the inter-capital-city differentials of the newly-fixed standard basic wage according to the latest "C" Series index numbers. The Commission decided to grant an increase of a uniform amount.

In the judgment delivered on 29th April, 1957, the Commission rejected the claims made by the unions and granted a uniform increase of 10s. a week in the basic wage for adult males to come into effect from the first pay-period to commence on or after 15th May, 1957.

* Print No. A5436, p. 3.

† Ibid., p. 9.

As a result of this decision the basic wage for adult females was increased by 7s. 6d. with proportionate increases for juniors of both sexes and for apprentices. The Commission also advised that it approved an annual review of the basic wage and would be available for this purpose in February, 1958. However, although favouring an annual review of the basic wage, the Commission considered that "it would not be proper for it nor would it wish to curtail the existing right of disputants to make an application at whatever time they think it necessary to do so".*

A more detailed summary of the judgment may be found in *Labour Report* No. 46, pages 68-71.

(xi) *Basic Wage Inquiry*, 1958. On 18th February, 1958, the Conciliation and Arbitration Commission, constituted in Presidential Session, commenced hearing an application by respondent unions for the following variations of the existing Metal Trades Award, namely:—

"By increasing the amounts of basic wage prescribed therein for respective cities, towns and localities to the figure they each would have reached had the quarterly adjustment system based on the "C" Series retail price index numbers been retained, plus an addition of 10s. to each basic wage, and by making provision for future adjustment of each of the new amounts at quarterly intervals by the application thereto of the same index numbers."†

The claims for the restoration of quarterly adjustments and for basic wage increases were opposed by private employers and by the State of South Australia, which also contended that as the cost of living was much lower in Adelaide than in Melbourne and Sydney, greater disparities in basic wage rates than then existed should be determined if, against its submission, any general increase in the basic wage were decided upon. Tasmania, the only other State represented, made no submissions.

The Attorney-General of the Commonwealth intervened in the public interest under section 36 (1) of the Conciliation and Arbitration Act and leave to intervene was granted to the Professional Officers' Association of the Commonwealth Public Service, three other organizations of medical and scientific workers employed in the Commonwealth Public Service and the Australian Council of Salaried and Professional Associations.

In its judgment, delivered on 12th May, 1958, the Commission rejected the submission by counsel for the Professional Officers' Association "that if the Commission is satisfied that there is in the community capacity to pay a higher wage bill, consideration should be given to the question whether that increased capacity should be reflected in an increased basic wage only or extended also to the marginal or secondary contents of aggregate wages and salaries".‡ The Commission also rejected the submission by counsel for the Australian Council of Salaried and Professional Associations that when the Commission looked at the capacity of industry to pay and gave an increase in the basic wage, it "always kept something in hand for a marginal claim which would probably be coming up".§

The claim of the unions for the restoration of the 1953 basic wage standard was rejected by the Commission on the same grounds as in its 1957 judgment, i.e., that it was unsafe to assume that the economy could sustain the 1953 rate as a "standard" in real terms.

The Commission then considered the three specific issues before it, namely, (i) should the system of automatic adjustments be restored? (ii) should the basic wage be increased, and if so, by what amount? and (iii) should there be uniform or disparate increases?

(i) *Should the System of Automatic Adjustments be Restored?* Counsel for the unions submitted that the unions still regarded the "C" Series index as a proper guide for the determination of basic wage levels but that if this contention were unacceptable to the Commission, as it had been in the three previous inquiries, there should be an immediate decision upon principle and later, if need be, an inquiry in an effort to ascertain a proper price index. He also submitted that there should be from time to time, additions to wages to afford to workers their proper share of increased productivity and efficiency and that although the unions had never claimed that increments for increased productivity could under present circumstances be made by way of automatic adjustment, the objective of wage increases commensurate with price increases could best be achieved by the use of an automatic adjustment system.

* Print No. A5436, p. 23.

† Print No. A6079, p. 4.

‡ Ibid., p. 5.

§ Ibid., p. 7.

After having considered the submissions and without hearing arguments against the proposition, the Commission, on 21st February, 1958, rejected the application for the restoration of automatic adjustments and for a deferred inquiry thereon.

In the reasons for its judgment the Commission stated that there was nothing in the submission to justify a departure from the decisions of 1953, 1956 and 1957 to reject automatic wage adjustments. The Commission also again expressed the opinion that a yearly assessment of the capacity of Australia for the purpose of fixing a basic wage would be most appropriate.

(ii) *Should the Basic Wage be Increased and, if so, by what amount?* After hearing arguments for and against an increase in the basic wage rates, and submissions, mainly statistical, on behalf of the Commonwealth, the Commission was unanimously of the opinion that the position of the economy regarded as a whole was such as to justify an increase in the basic wage, but a difference of opinion existed as to what the amount of the increase should be.

A majority of the members, namely, Kirby C.J. and Gallagher J., considered that it was undesirable in the interests of all to grant an increase higher than 5s.; Wright J., on the other hand, considered that a basic wage level substantially higher than that proposed by the majority was justified.

Under section 68 of the Conciliation and Arbitration Act 1904-1956, the question was decided according to the decision of the majority. Accordingly the decision of the Commission was that the rates of basic wage for adult males under Federal awards should each be increased by 5s. a week.

(iii) *Uniform or Disparate Increases?* The South Australian Government submitted that economically there was no scope at all for a basic wage increase anywhere in Australia; and, as in the 1957 inquiry, again pursued the question of inter-city differentials in those awards where it applied, as an answer to the union claim that the amount of the basic wage in Adelaide should be calculated by reference to the "C" Series retail price index numbers for that city. The substance of the State's case on inter-city differentials was that the actual cost of living was so much lower in Adelaide than in Melbourne and Sydney that greater disparities in basic wage rates than then existed should be determined by the Commission, if any general increase in the basic wage were decided upon. Subject to a stipulation that no reduction should be made in the existing basic wage rate for Adelaide, counsel for the South Australian Government claimed that the rate should be approximately 10 per cent. below the rate fixed for Sydney instead of approximately 5 per cent. below, as it then was.

He also claimed that the proposal had the support of South Australian employers, but in the Commission's view the employers had not spoken unitedly or unanimously, nor had anyone supported the proposal as put to the Commission. It concluded that the claim must be rejected on the ground that it would not be wise or just to apply it in South Australia in view of the fact that it was neither sought nor supported by any other party, and its application to the Government and its instrumentalities alone was not sought.

The Commission indicated that the issues involved in inter-city differential wage rates were complex and could not be decided after a brief hearing.

In the judgment delivered on 12th May, 1958, the decisions of the Commission were given in the following terms:—

- "1. The claim for restoration of automatic quarterly adjustments is refused.
2. The claim of the South Australian Government for special treatment is refused.
3. The basic wages of adult male employees covered by Federal awards will be increased by a uniform amount of 5s. per week.
4. The new rates will come into effect from the beginning of the first pay-period commencing on or after 21st May instant subject to special cases." *

As a result of this decision the basic wage for adult females was increased to 75 per cent. of the new basic wage for adult males with proportionate increases for juniors and apprentices of both sexes.

(xii) *Basic Wage Inquiry*, 1959. On 24th February, 1959, the Conciliation and Arbitration Commission, constituted in Presidential Session by Kirby C.J. (President), Foster and Gallagher J.J. (Deputy Presidents), commenced hearing an application by respondent unions for the following variations of the existing Metal Trades Award, namely:—

“By increasing the amounts of basic wage prescribed therein for respective cities; towns and localities to the figure they each would have reached had the quarterly adjustment system based on the “C” Series retail price index numbers been retained, plus an addition of 10s. to each basic wage, and by making provision for future adjustment of each of the new amounts at quarterly intervals by the application thereto of the same index numbers.”*

A large number of applications for similar variation of other awards were ordered to be treated as involved in the inquiry and as such to be decided upon the evidence, material and submissions made from the beginning of the hearing.

The application of the unions was opposed by private employers generally, and by the State of South Australia and two of its instrumentalities.

Tasmania was the only other State represented and it appeared in support of the application of the unions in regard to the increase of the basic wage to the amount it would have reached had the adjustment system been retained and the restoration of that system.

Counsel for the Attorney-General of the Commonwealth, who intervened pursuant to his statutory right, submitted on behalf of the Commonwealth that the application for restoration of the automatic adjustment system should be refused. The Commonwealth again supplied for the benefit of the Commission and the parties, economic and statistical information and material. In addition, the Commonwealth, without making a particular submission as to whether there should be an increase, made a general submission on the state of the national economy.

The Australian Council of Salaried and Professional Associations was granted leave to intervene, and submissions were also presented on behalf of fixed income earners and pensioners generally.

Counsel for the employers also appeared for The Graziers Association of New South Wales and other organizations of employers in the pastoral industry to reduce the basic wage in the Pastoral Award, 1956, by £1 5s., being the aggregate amount of the increases granted by the Court in 1956 and the Commission in 1957 and 1958. The Commission decided to join these applications in the main hearing on 17th March, 1959, as a matter of procedure only and without deciding affirmatively that the Commission as constituted for that hearing had power to grant them in whole or in part. At the conclusion on 5th May, 1959, of submissions in support of these applications and without calling upon counsel for the Australian Workers' Union in reply, the Commission stated that it would reject the applications for reduction of the basic wage in the Pastoral Award and again indicated that the question of jurisdiction as to whether the Commission had the power to decide a different basic wage remained “undecided and open.”

On 5th June, 1959, the three Judges delivered separate judgments. On the question of whether the system of automatic quarterly adjustments should be restored the members of the Commission were divided in opinion and therefore the question was decided in accordance with the decision of the majority. The majority decision, namely, that of Kirby C.J. and Gallagher J., was that the claim of the unions for restoration of the said system should be refused. Foster J. dissented.

The members of the Commission were unanimous in the opinion that there should be an increase in the basic wage but as to the amount of the increase they were divided in opinion as follows:—

The President, Kirby C.J., was of opinion that the increase should be 15s. a week added to each basic wage for adult males in the awards concerned and that the increased basic wage should become payable as from the beginning of the first pay-period commencing on or after 11th June, 1959.

* Print No. A6618, pp. 4 and 5.

Foster J. was of opinion that the increase should be 20s. a week, payable as to 10s. as from the first pay-period in July, 1959 and as to the balance by increases of 2s. 6d. for four quarters commencing 1st January, 1960.

Gallagher J. was of opinion that the increase should be one of 10s. a week and that the increased wage should become payable as from the date chosen by the President.

Foster J., while holding his opinion, decided to concur in the decision proposed by the President.

A summary of the separate reasons for judgment is set out in the following paragraphs.

Kirby C.J. The President said that apart from the question of the basic wage in the pastoral industry, which had already been decided, there were two issues for the Commission's decision:—(i) should the automatic adjustment system be restored? (ii) should the basic wage in the Commission's awards generally be increased and, if so, by what amount?

(i) *Should the Automatic Adjustment System be Restored?* On this question the President stated that in his view nothing had been put at the inquiry which would justify a restoration of the system, and the decisions against the retention or restoration of the system made by the Court in 1953 and 1956 and by the Commission in 1957 and 1958 were correct. He said "I have come to this conclusion on the material and submissions before the Commission at this hearing and quite independently of the admitted shortcomings since 1953 of the 'C' Series index. I would emphasize that the annual review of the amount of the basic wage by a presidential session of this Commission is a substitute in every way for arbitrary adjustment by an index which has to do with one factor only of the many making up the economy. Its aim in practice as well as theory is to fix a basic wage at the highest amount the economy can afford to pay A period of one year—in the absence of exceptional circumstances calling for a different period—remains in my view the ideal period between reviews of the basic wage".* He considered that assessment of the many factors making up national economic capacity proves difficult enough when assessing a money sum, and that the difficulties of assessment of these many factors would be increased immeasurably if the task were to add a fluctuating sum to an already fluctuating wage even if the task were to be undertaken at longer intervals. The President also stated "I wish to make it clear that my rejection of the adjustment system is based not on the imperfections of the available indexes but on the system's intrinsic demerits when compared with a system based on judgment of all factors of the economy including judgment on the movement of prices".†

(ii) *Should the basic wage be increased and, if so, by what amount?* The President considered various indicators of the state of the economy and said that they justified a basic wage increase of a not insignificant amount. He agreed that the worker was entitled to an increase in the basic wage because of increased productivity but he could not agree that on the available material the growth of productivity could be accurately measured or that basic wage increases were the only or main means of ensuring the worker his share of the fruits of increased productivity. Nevertheless, he felt that some allowance should be made for the growth of productivity in assessing an increase in the basic wage. After considering all the material before the Commission and the submissions made on behalf of the parties, he was of opinion that the basic wage should be increased by 15s. a week.

Foster J. Foster J., in considering the powers and functions of the Commission and the form of the inquiry, stated ". if, as is my view, these 'inquiries' no longer have, and should never have had, the character of litigation, then it is proper to consider whether the 'inquiry' in the form it now has is adequate to achieve its avowed function".‡ He referred to some of the powers and duties entrusted to the Commission which revealed and emphasized the extraordinary differences between the Commission and a traditional court of law. He considered that although the Commission "gets two points of view placed before it, elaborately discussed and tested by questioning, the matters for the Commission's determination are far wider than the particular points of view of the interests which assume the roles of contestants before us".§ In his view, the data made available by the Commonwealth Government, as intervener, are in effect the foundations of the opinions and conclusions of all the expert witnesses as well as of all the contentions of the representatives of the various contestants, and it must be upon this

* Print No. A6618, p. 6.

‡ Ibid., p. 25.

§ Ibid., p. 27.

material and interpretation that the Commission ultimately bases its decision. He suggested that "experts in consultation with the Commission in the presence of representatives of the economic interests concerned might well bring far more satisfactory results than a proceeding modelled misleadingly upon a civil action at law".*

Foster *J.* stated that the purpose of the inquiry was to fix a money sum for a basic wage which, at the time of its pronouncement, would represent a standard of living which the Commission finds to be within the capacity of the economy to sustain throughout the period it determines for the duration of its award. For this reason he considered that the basic wage should be automatically adjustable at quarterly intervals. As to whether such adjustment should be made by the application of a price index, he said that "A price index does enable the standard of living prescribed by the Commission to be maintained, and it does prevent the wage determined upon a capacity basis from falling below or rising above that ascertained capacity. It prevents the defeat of the Commission's award and is, in my opinion, the only satisfactory method of preventing that award from becoming to some extent illusory and potentially mischievous".† In his view, the decision in 1953 to abandon the quarterly adjustment system was wrong.

Foster *J.* was of opinion that the basic wage should be increased so as to restore, in part at least, the standard of living awarded in 1950 and maintained by quarterly adjustments until 1953 and to secure to the basic wage earner some share of the increased productivity of the community. The amount of the increase would depend on whether or not the quarterly adjustment system were to be restored. If it were restored, the increase in the basic wage should be 16s. a week payable at the first pay-period in July, 1959, adjustable quarterly by the "C" Series index, the first adjustment to be for the quarter ending 30th June, 1959. If quarterly adjustments were not restored, the ultimate increase should be 20s. a week, the amount of the increase to be spread over a period of eighteen months, payable as to 10s. as from the first pay-period in July, 1959, with an increase of 2s. 6d. on each of the first pay-periods in January, April, July and October, 1960.

In giving his reasons for the proposed increase, Foster *J.* reviewed the indicators of the state of the economy and referred to economic and statistical material submitted by counsel for the Commonwealth, which, he said, "confirms my opinion that the economy, seen at this point of time, is sounder than it was last year, and indeed, in some of the years when the Commission did in fact raise the basic wage".‡

Although reluctant to depart from his views as to the amount of the increase, Foster *J.* decided to concur in the proposed decision of the President, in order that the Commission might reach an effective decision.

Gallagher *J.* On the question of whether there should be a restoration of the quarterly adjustment system, Gallagher *J.* said that he was in complete agreement with Kirby *C.J.*, and with the reasons which the President had given for his conclusion, and added:—"Between December, 1950, and November, 1952, the operation of quarterly adjustments caused the basic wage for Sydney to move from 165s. to 237s. A system which, without any examination of the capacity of the economy to pay, added a sum of £3 12s. weekly to a basic wage in so short a time was quite unsuitable for modern conditions. "§

Gallagher *J.*, after setting out in general terms the arguments of the unions and the employers and summarizing the essentials of the submissions of the Commonwealth, stated that in his opinion the economy of the country was such as would sustain a higher basic wage, but the amount claimed by the unions was too high. In giving reasons for his opinion, he said ". it is almost certainly the position that every male employee in the community who works under an industrial award receives something over and above the basic wage, and in the determination whether he is receiving his proper share of the national wealth. this is a relevant and material matter for consideration".|| In support of this view he quoted pronouncements made in a number of previous basic wage inquiries.

After referring to a number of matters which he considered should be taken into account in the assessment of a basic wage, Gallagher *J.* said "Minded of the general considerations which I have set out, giving due recognition on the one hand to the improved state of the economy and on the other hand to the undoubtedly heavy losses which were suffered by the country because of the combined effect of the 1957 drought and

* Print No. A6618, p. 28. † Ibid., p. 30. ‡ Ibid., p. 37. § Ibid., p. 49. || Ibid., p. 53.

of reduced export prices, and taking into account that amongst the employers who will be called upon to meet basic wage increases are farmers who have recently suffered a big loss of income, I am of the opinion that the sum of ten shillings represents the highest weekly payment which the economy should be called upon to sustain in respect of an increase of each basic wage for adult males covered by relevant awards or agreements".*

He then proceeded to state briefly his reasons for rejecting the application for a lower basic wage in the pastoral industry. He was of the opinion that "it would in the absence of the most exceptional circumstances be wholly undesirable and against the interests of industrial peace that there should be for employees in the rural industries a basic wage lower than that which is prescribed for other employees".*

(xiii) *Basic Wage Inquiry*, 1960. Particulars of the claims made by employee organizations and the decision given will be found in the Appendix.

(xiv) *Rates Operative, Principal Towns*. The basic wage rates of the Commonwealth Conciliation and Arbitration Commission for adult males and females, operative as from the beginning of the first pay-period commencing on or after 11th June, 1959, were as shown in the following table:—

COMMONWEALTH BASIC WAGE: WEEKLY RATES (a), JUNE, 1959.

(a) Rates include prosperity loadings where applicable. (b) Prior to 30th June, 1956, Commonwealth Court of Conciliation and Arbitration. (c) Rates operative from the beginning of the first pay-period in the month indicated, unless otherwise stated. (d) Automatic adjustment discontinued (see p. 431). (e) Operative from the beginning of the first pay-period commencing on or after 15th May, 1957. (f) Operative from the beginning of the first pay-period commencing on or after 21st May, 1958. (g) Operative from the beginning of the first pay-period commencing on or after 11th June, 1959.

A table showing Commonwealth basic wage rates from 1923 to 1959 was published in *Labour Report* No. 46, pages 194-7.

3. **Australian Territories.**—In the Northern Territory there are two basic wages operating, one in respect of areas north of the 20th parallel of South Latitude, generally referred to as the "Darwin" rate, and the other in respect of areas south of that parallel and extending down to the 26th parallel (the "Port Augusta" rate).

The basic wage rates payable as from the beginning of the first pay-period commencing on or after 11th June, 1959, were:—"Darwin" rate, adult males, £14 15s., adult females, £11 1s.; "Port Augusta" rate, adult males, £14 2s., adult females, £10 11s. 6d.

In addition to the above rates, special loadings were prescribed in Northern Territory awards following the fixation of the basic wage rates operative from November, 1951.

In the Australian Capital Territory, the rates payable as from the beginning of the first pay-period commencing on or after 11th June, 1959, were £13 18s. for adult males and £10 8s. 6d. for adult females.

Further details of basic wage rates in the Northern Territory and the Australian Capital Territory may be found in *Labour Report* No. 46, pages 81-7.

4. **Basic Wage Rates for Females.**—Reference should be made to *Labour Report* No. 46, (pp. 75-81) for an account of the fixation of minimum rates and basic wages for adult females by the Commonwealth Court of Conciliation and Arbitration. At the end of the 1949-50 Basic Wage Inquiry the Commonwealth Court of Conciliation and Arbitration, by a majority decision, fixed the basic weekly wage for adult females at 75 per cent. of the corresponding male rate from the beginning of the first pay-period commencing in December, 1950. This percentage has continued to be prescribed in subsequent inquiries.

5. *State Basic Wages.*—(i) *New South Wales.* The first determination under the New South Wales Industrial Arbitration Act of a standard “living” wage for adult male employees was made on 16th February, 1914, by the Court of Industrial Arbitration. A Board of Trade established in 1918, with power to determine the “living” wage for adult male and female employees in the State, made numerous declarations from 1918 to 1925, but ceased to function after the Industrial Arbitration (Amendment) Act 1926 transferred its powers to the Industrial Commission of New South Wales as from 15th April, 1926.

The adult male rate was determined on the family unit of a man, wife and two children from 1914 to 1925; a man and wife only in 1927, with family allowances for dependent children; and a man, wife and one child in 1929, with family allowances for other dependent children. However, with the adoption in 1937 of the Commonwealth basic wage, the identification of a specified family unit with the basic wage disappeared.

A table showing the variations in the living wages determined by the industrial tribunals of New South Wales up to 27th April, 1937, was published in earlier issues of the Official Year Book (*see* No. 37, page 481). From that date until November, 1955, the rates adopted followed the Commonwealth basic wage (*see* below).

Shortly after the Commonwealth Court of Conciliation and Arbitration announced its judgment in the 1937 Basic Wage Inquiry, the Government of New South Wales amended the Industrial Arbitration Act to make the State basic wage agree with the Commonwealth rate ruling in New South Wales, and to adopt, as far as practicable, the general principles of operation laid down by the Commonwealth Court.

The principle of supplementing wages by a payment in respect of dependent children under fourteen years of age was operative in New South Wales from July, 1927, until superseded by the Commonwealth Government Scheme operative from 1st July, 1941. A brief account of the main features of the system was given in Official Year Book No. 37, pages 485–6.

Further amendments to the Industrial Arbitration Act were made in 1950 to give effect to the new rates declared by the Commonwealth Court of Conciliation and Arbitration in the 1949–50 Basic Wage Inquiry.

Differential basic wage rates for country areas (except Broken Hill) and for employees under Crown awards were eliminated by an amendment of the Industrial Arbitration Act in 1951.

The decision of the Commonwealth Court of Conciliation and Arbitration in September, 1953, to discontinue the system of automatic adjustment of the basic wage consequent on changes in the “Court” Series retail price index numbers was considered by the New South Wales Industrial Commission. On 23rd October, 1953, it certified that there had been an alteration in the principles of fixation of the basic wage, and instructed that the automatic adjustment clause be deleted from awards, etc., within its jurisdiction.

As a result, the basic wages applicable for the State and operative from the beginning of the first pay-period commencing in August, 1953, remained unchanged until November, 1955, the rates for New South Wales (excluding Broken Hill) during this period being £12 3s. a week for adult males and £9 2s. for adult females.

In October, 1955, the Industrial Arbitration Act 1940–1955 was amended to provide for the automatic adjustment of the existing basic wage each quarter, in accordance with the movements in the Commonwealth Statistician’s retail price index numbers. The first adjustment, based on the index number for the September quarter, 1955, represented the amount which would have been added to the basic wage if quarterly adjustments had not been suspended, and was made payable from the beginning of the first pay-period in November, 1955. The rates then payable were £12 13s. for adult males and £9 9s. 6d. for adult females.

Automatic quarterly adjustments were made for each subsequent quarter and the State basic wage payable in New South Wales (except Broken Hill) from the first pay-period in May, 1960 was £14 5s. for adult males and £10 13s. 6d. for adult females.

The Industrial Arbitration Act was further amended by the Industrial Arbitration (Female Rates) Amendment Act (No. 42, 1958) which became operative on 1st January, 1959. This Act defined the existing basic wage for adult females as being 75 per cent. of the male basic wage. Provision was also made for equal pay for males and females in certain circumstances. Where the Industrial Commission or a Conciliation Committee is satisfied that male and female employees are performing work of the same or a like nature and of equal value, they shall prescribe the same marginal or secondary rates of wage. The basic wage for these adult females was prescribed as 80 per cent. of the appropriate basic wage for adult males as from 1st January, 1959. Thereafter, the basic wage is to be increased annually by 5 per cent., so that on 1st January, 1963 it will be the same as that for adult males.

(ii) *Victoria.* There is no provision in Victorian industrial legislation for the declaration of a State basic wage. Wages Boards constituted from representatives of employers, employees and an independent chairman, for each industry group or calling, determine the minimum rate of wage to be paid in that industry or calling. In general, these Boards have adopted a basic wage in determining the rate of wage to be paid.

By an amendment to the Factories and Shops Act in 1934, Wages Boards were given discretionary power to include in their determinations appropriate provisions of relevant Commonwealth Awards. A further amendment to this Act in 1937 made it compulsory for Wages Boards to adopt such provisions of Commonwealth Awards. The 1937 Act, as amended, also gave Wages Boards power to adjust wage rates, "with the variation from time to time of the cost of living as indicated by such retail price index numbers published by the Commonwealth Statistician as the Wages Board considers appropriate". The Wages Boards thus adopted the basic wages declared by the Commonwealth Court of Conciliation and Arbitration and followed that Court's system of adjusting the basic wage in accordance with variations in retail price index numbers.

After the Commonwealth Court of Conciliation and Arbitration discontinued the system of automatic adjustment of the Commonwealth basic wage in September, 1953, a number of Wages Boards met in November, 1953, and deleted references to these adjustments. However, an amendment to the Factories and Shops Act in November, 1953, required Wages Boards to provide for the automatic adjustment of wage rates in accordance with variations in retail price index numbers. From 1st July, 1954, the Factories and Shops Acts 1928-1953 were replaced by the Labour and Industry Act 1953. This was, in general, a consolidation of the previous Acts and retained the requirement providing for the automatic adjustment of wages in accordance with variations in retail price index numbers.

An amendment to the Labour and Industry Act proclaimed on 17th October, 1956, deleted the automatic adjustment provision and directed Wages Boards in determining wage rates to take into consideration relevant awards of, or agreements certified by, the Commonwealth Conciliation and Arbitration Commission. As a result of this legislation the last automatic quarterly adjustment of the basic wage made was based on the variation in retail price index numbers for the June quarter, 1956, and was payable as from the beginning of the first pay-period in August, 1956. Following the judgment of the Commonwealth Conciliation and Arbitration Commission in the 1959 Basic Wage Inquiry (see page 436), Wages Boards met in June and July, 1959 and varied their determinations by incorporating the new Commonwealth rates. The rates for Melbourne, which were still payable in May, 1960, were £13 15s. a week for adult males and £10 6s. for adult females.

(iii) *Queensland.* The first formal declaration of a basic wage (£4 5s. for adult males) by the Queensland Court of Industrial Arbitration was gazetted on 24th February, 1921. Prior to this declaration, the rate of £3 17s. a week for adult males had been generally recognized by the Court in its awards as the basic or living wage. The Queensland Industrial Conciliation and Arbitration Act provides that any basic wage declared must at least maintain an employee, his wife and family of three children in a fair and average standard of comfort.

The rates declared by the Queensland Court at various dates were shown in the table on page 92 of *Labour Report* No. 46.

From 21st April, 1942, the Queensland Industrial Court adopted the practice of making quarterly declarations of the basic wage on the basis of variations in the "C" Series retail price index number for Brisbane.

The Queensland Industrial Court granted increases of 7s. and 5s. to the basic wages for adult males and adult females respectively, payable from 23rd December, 1946, following the "interim" basic wage judgment of the Commonwealth Court of Conciliation and Arbitration announced earlier in December, 1946.

Following the decision of the Commonwealth Court of Conciliation and Arbitration to increase the male and female basic wages from December, 1950, the Queensland Industrial Court conducted an inquiry as to what change, if any, should be made to the State basic wage for Queensland. The Industrial Court granted an increase of 15s. a week to both adult males and adult females, operative from 7th December, 1950. The new male rate was identical with the Commonwealth basic wage for the Brisbane metropolitan area. The basic wage payable to adult females was approximately 66 per cent. of the male rate.

In January, 1953, the Queensland Industrial Court departed from the practice established in 1942 of varying the basic wage in accordance with quarterly variations in the "C" Series of retail price index numbers. If the practice had been continued, a reduction of one shilling would have been made in the basic wage for adult males from

January, 1953. The Court was not satisfied, however, that the movement in the "C" Series index for Brisbane for the December quarter, 1952 was a true representation or reflex of the economic position for Queensland as a whole and so declined to make any alteration to the then existing basic wage. Quarterly adjustments were made for the next four quarters and the basic wage became £11 5s. for adult males from 1st February, 1954.

Commencing in March, 1954, a Basic Wage Inquiry was conducted by the Court and in its judgment of 11th June, 1954, the Court stated that there would be no change in the basic wage rates declared for February, 1954.

At subsequent hearings consequent on the movement in the "C" Series of retail price index numbers for Brisbane in respect of the quarters ended 30th June, 30th September and 31st December, 1954 and 31st March, 1955, the Court again decided not to vary the existing basic wage rates. However, after considering the "C" Series index number for the quarter ended 30th June, 1955 and its relation to the index number for the March quarter, 1955, the Court announced that, as these figures showed a continued upward trend of cost of living in 1955, the basic wage for adult males should be increased from £11 5s. to £11 7s. from 1st August, 1955. In this judgment, the Court emphasized that it holds itself free whether or not to adjust the basic wage upwards or downwards in accordance with movements in the "C" Series retail price index numbers.

The Court examined the movement in the "C" Series retail price index numbers for each subsequent quarter and announced variations in the basic wage. The rates payable in the Southern Division (Eastern District) from 2nd May, 1960, were £13 11s. for adult males and £9 6s. for adult females.

In addition to the basic wage for the Southern Division (Eastern District), which includes Brisbane, adult males in other areas receive district allowances. As from 2nd February, 1959, the allowances have been:—Southern Division (Western District) 10s. 6d., Mackay Division 9s., Northern Division (Eastern District) 10s. 6d., Northern Division (Western District) £1 12s. 6d. The allowances for adult females are half of those for adult males.

(iv) *South Australia.* The Industrial Code, 1920–1958 provides that the Board of Industry shall after public inquiry declare the "living wages" to be paid to adult male and female employees. The Board has power also to fix different rates to be paid in defined areas.

The family unit was not specifically defined in the Code, but the South Australian Industrial Court in 1920 decided that the average employee in respect of whom the living wage is to be declared is a man with a wife and three children.

The first declaration by the Board of Industry was made on 15th July, 1921, when the living wage for adult male employees in the metropolitan area was determined at £3 19s. 6d. a week. A table showing the living wages declared from time to time was published on page 95 of *Labour Report* No. 46.

Following the "interim" increase in the "needs" basic wage of the Commonwealth Court of Conciliation and Arbitration announced on 13th December, 1946, the South Australian Government made a provision in the Economic Stability Act 1946 for the declaration by the Governor of a living wage based on the Commonwealth basic wage for Adelaide. This action was taken because the Board of Industry had made a determination on 5th September, 1946, and under the Industrial Code was not able to make a further determination for six months.

The Industrial Code Amendment Act, 1949 made provision for the quarterly adjustment of the living wage in accordance with the variations in the Commonwealth basic wage for Adelaide. In effect, this made the State living wage and the Commonwealth basic wage equal from the beginning of the first pay-period commencing in February, 1950. The prescribed adjustment to the female living wage was seven-twelfths of that made to the Commonwealth male basic wage. The Board of Industry retained power to amend the living wage but any new living wage was to be adjusted quarterly as above.

Following the decision of the Commonwealth Court of Conciliation and Arbitration in the 1949–50 Basic Wage Inquiry, the South Australian Industrial Code was amended to provide for declarations of the living wage by proclamation to prevent unjustifiable differences between the State and Commonwealth rates of wage. By proclamation dated 30th November, 1950, the South Australian living wage in the metropolitan area was made identical with the December, 1950, rates fixed by the Commonwealth Court of Conciliation and Arbitration for the metropolitan area of South Australia. The female basic wage, which had been approximately 54 per cent. of the male basic wage, was increased to 75 per cent. of the corresponding male rate.

When the Commonwealth Court of Conciliation and Arbitration discontinued quarterly adjustments to Commonwealth basic wages in September, 1953, the South Australian living wage also ceased to be varied quarterly and since that time has remained the same as the Commonwealth basic wage for Adelaide. Following the Commonwealth basic wage inquiries in 1956 and subsequent years, increases were made in the Commonwealth basic wage for adult males, with proportionate increases for adult females. Similar increases were made to the South Australian living wage by proclamation. The rates operative from 15th June, 1959, were £13 11s. for adult males and £10 3s. for adult females. These rates were still operative in May, 1960.

(v) *Western Australia.* The Industrial Arbitration Act 1912–1952 provides that the Court of Arbitration may determine and declare a basic wage at any time on its own motion and must do so when requested by a majority of industrial unions or by the Western Australian Employers' Federation, with the limitation that no new determination shall be made within twelve months of the previous inquiry.

The term "basic wage" is defined in the Act as "a wage which the Court considers to be just and reasonable for the average worker to whom it applies". In determining what is just and reasonable, the Court must take into account not only the "needs of an average worker" but also the "economic capacity of industry" and any other matters it deems relevant.

The Act provides that the Court of Arbitration may make adjustments to the basic wage each quarter if the statement supplied by the State Government Statistician showing the "C" Series retail price index numbers and monetary equivalents in terms of the State basic wages indicates that there has been a variation of 1s. or more a week compared with the previous quarter. These adjustments apply from the dates of declaration by the Court.

The first declaration of the basic wage by the Court of Arbitration, after the authority to fix one was vested in the Court in 1925, was made on 11th June, 1926. The family unit is not specifically defined in the Act, but it has been the practice of the Court to take as a basis for its calculations a man, his wife and two dependent children. Since that date the principal inquiries have been those of 1938, 1947, 1950 and 1951. A table showing annual and special declarations of the basic wage by the Court of Arbitration will be found in *Labour Report* No. 46, page 98.

Following the judgment of the Commonwealth Court of Conciliation and Arbitration in the 1949–50 Basic Wage Inquiry, the Western Australian Court of Arbitration resumed an inquiry which had been adjourned, to ascertain what change should be made in the State basic wage rates. In its judgment of 7th December, 1950, the Court decided that the basic wage should be increased by £1 a week for adult males and by 15s. a week for adult females. As the result of a subsequent inquiry, the basic wage for adult females was increased from 1st December, 1951 to 65 per cent. of the corresponding male rate. This was subject to the condition that the increase in the basic wage should be offset by the reduction in or deletion of existing margins as specified by the appropriate award or determination.

Following the decision of the Commonwealth Court of Conciliation and Arbitration, in September, 1953, to discontinue quarterly adjustments to Commonwealth basic wages, the Western Australian Court of Arbitration exercised its discretionary power and declined to make any adjustments to the basic wage from November, 1953, to the June quarter, 1955.

However, from 9th August, 1955, the Western Australian Court decided to increase the adult male basic wage by 5s. 11d. a week for Perth and to make corresponding increases for other areas. No further change was announced in the basic wage until January, 1956, and for each subsequent quarter the Court has varied the State basic wages after considering the official statement supplied by the State Government Statistician except in February, 1959 when no change was made.

The rates payable in the metropolitan area as from 2nd May, 1960 were £14 6s. 4d. for adult males and £10 14s. 9d. for adult females.

(vi) *Tasmania.* A State basic wage is not declared in Tasmania. Wages Boards are constituted for a number of industries, from representatives of employers and employees and an independent chairman (who is common to all Wages Boards), and determine the minimum rate of wage payable in each industry. Until February, 1956, these Boards generally adopted the basic wages of the Commonwealth Court of Conciliation and Arbitration in determining the rate of wage to be paid.

The Wages Board Act gives Wages Boards power to adjust their wage rates in accordance with variations in cost of living as indicated by retail price index numbers published by the Commonwealth Statistician. When the Commonwealth Court discontinued the system of automatic adjustments of the basic wage in September, 1953, the Chairman of the Wages Boards stated he was of the opinion that automatic adjustment

clauses should be deleted from all Wages Boards determinations. Before Wages Boards met to consider this matter, the wage rates for all determinations were automatically adjusted upwards from the beginning of the first pay-period commencing in November. By early December, 1953, all Wages Boards had met and deleted the automatic adjustment clause from determinations and cancelled the adjustment increases payable from November.

Automatic quarterly adjustments in accordance with movements in retail price index numbers were reintroduced by Wages Boards in February, 1956 and the rate payable from the first pay-period in February restored the basic wage to the level it would have reached if quarterly adjustments had not been discontinued in 1953. Following a rise in the retail price index number for the March quarter, 1956, a further basic wage increase was payable from the first pay-period in May, 1956.

The Employers' Federation of Tasmania sought a conference under section 77 of the Wages Boards Act 1920-1951 to consider an application to adopt the basic wage promulgated by the Commonwealth Court of Conciliation and Arbitration on 25th May, 1956, and for the deletion of automatic quarterly adjustment of the basic wage from determinations of Wages Boards. As a result of this application, a conference of organized bodies of employers and employees was convened by the Chief Secretary on 22nd June, 1956, to enable a discussion to take place on the advisability or otherwise of adopting the request of the Employers' Federation, so that the Chairman of Wages Boards could be fully informed at a representative gathering prior to the meeting of individual Wages Boards.

At the conclusion of the conference, the Chairman of the Wages Boards stated he was of the opinion that the adjustments should be suspended for a period in an endeavour to achieve some measure of stability. He also indicated that any Wages Board was competent by agreement between the representatives of employers and employees or majority decision to adopt the Commonwealth Court's basic wage or any other method of fixing the basic wage.

The majority of Wages Boards decided to suspend automatic quarterly adjustments after adopting the increase based on retail price index numbers for the June quarter, 1956, and payable from the first pay-period in August, 1956, and wage rates remained unchanged until July, 1959. Following the decision of the Commonwealth Conciliation and Arbitration Commission in June, 1959 to increase the basic wage, Wages Boards met in July, 1959 and incorporated the new rates in their determinations. The rates for Hobart then became £14 2s. for adult males and £10 11s. 6d. for adult females.

(vii) *State Basic Wage Rates.* The "basic" wage rates of State industrial tribunals, operative in May, 1959, and May, 1960, are summarized in the following table:—

STATE BASIC WAGES—WEEKLY RATES.

(a) Where dates are not quoted wage rates operate from the beginning of the first pay-period commencing in the month shown. (b) No basic wage declared. Rates shown are those adopted by most Wages Boards. (c) During June and July, 1959, Wages Boards varied determinations by adopting the Commonwealth basic wage rate.

(d) The "living wage" declared for the metropolitan area is also adopted for country areas, except at Whyalla where a loading of 5s. a week is generally payable. (e) As from the beginning of the first pay-period commencing in February, 1960 the female basic wage rate was increased from 65 per cent. to 75 per cent. of the male basic wage rate. (f) Wages Boards adopted the Commonwealth basic wage rate from July, 1959.

§ 5. Wage Margins.

1. **General.**—Wage margins have been defined as “ Minimum amounts awarded above the basic wage to particular classifications of employees for the features attaching to their work which justify payments above the basic wage, whether those features are the skill or experience required for the performance of that work, its particularly laborious nature, or the disabilities attached to its performance ”.*

Prior to 1954, the Commonwealth Court of Conciliation and Arbitration had not made any general determination in respect of wage margins, but general principles of marginal rate fixation had been enunciated by the Court in the Engineers' Case of 1924, the Merchant Service Guild Case of 1942 and the Printing Trades Case of 1947.

2. **Metal Trades Case, 1954.**—The Amalgamated Engineering Union, the Electrical Trades Union and other employee organizations parties to the Metal Trades Award, 1952, filed applications during 1953 for increased margins for all workers covered by this award.

The applications came on for hearing before J. M. Galvin C.C., who decided that they raised matters of such importance that, in the public interest, they should be dealt with by the Commonwealth Court of Conciliation and Arbitration. On 16th September and 6th October, 1953 the Conciliation Commissioner, pursuant to section 14A of the Conciliation and Arbitration Act, referred these applications to the Court.

The actual claims of the trade unions were that the marginal rate of 52s. a week payable to a fitter in the metal trades should be increased to 80s. a week (86s. for certain electrical trades) with proportionate increases for other award occupations. The margins then current, with a few exceptions, had been in existence since 1947. The employees' claims were in the nature of a test case to determine the attitude of the Court to applications for increased margins.

The Metal Trades Employers' Association and other respondents to the Metal Trades Award had counter-claimed that existing margins for skilled tradesmen should remain unaltered, while those paid to partly skilled or unskilled workers should be reduced.

The Court decided to take the Commissioner's two references together and the matter came on for hearing before the Full Arbitration Court (Kelly C.J., Kirby, Dunphy and Morgan JJ.) in Melbourne on 13th October, 1953.

In a judgment delivered on 25th February, 1954, the Court held that a *prima facie* case had been made for a re-assessment of margins but that the economic situation at that time, particularly in regard to the level of costs, did not permit of such a comprehensive review. The Court decided that to avoid the creation of new disputes, to save expense and to obviate procedural difficulties, it would not reject the claims but adjourn them until 9th November, 1954.

On 25th and 26th August, 1954, summonses were filed by the employees' organizations for orders that proceedings in this case be brought forward and the hearing was resumed on 5th October, 1954.

In a judgment delivered on 5th November, 1954† the Court made an order re-assessing the marginal structure in the Metal Trades Award by, in general, raising the current amount of the margin to two and a half times the amount of the margin that had been current in 1937. However, in cases in which the result of that calculation produced an amount less than the existing margin the existing margin was to remain unaltered. In effect, this decision increased the margins of a fitter from 52s. a week to 75s. a week, increased similarly margins of other skilled occupations, and made no increase in margins of what may generally be described as the unskilled or only slightly skilled occupations under the Metal Trades Award.

At the end of its judgment the Court stated that while its decision in this case related immediately to one particular industry, it was expected to afford general guidances to all authorities operating under the Conciliation and Arbitration Act, or under other legislation which provided for tribunals having power to make references, or being subject to appeal, to the Court, where the wage or salary may properly be regarded as containing a margin. The Court added observations for the guidance of these and of other tribunals “ which may regard decisions of this Court as of persuasive authority ”. Further details were published in *Labour Report* No. 46, 1958, pages 101–8.

3. **Margins Cases, 1959.**—On 25th August, 1959, the Commonwealth Conciliation and Arbitration Commission began considering a number of applications for increases in marginal rates. The Amalgamated Engineering Union and other employee organizations applied for increases in margins in Part I. of the Metal Trades Award. There were also applications by the Association of Architects, Engineers, Surveyors and Draughtsmen of Australia and

* *Commonwealth Arbitration Reports*, Vol. 80, p. 24.

† *Ibid.*, p. 3.

the Federation of Scientific and Technical Workers for variation of the Metal Trades Award, Part II. and of the Aircraft Industry Award, Part II., by the Australian Bank Officials' Association regarding the Bank Officials' Award and by the Australian Workers Union regarding the Gold and Metalliferous Mining Award. Finally there was an application by the Metal Trades Employers' Association and others to reduce rates in the Metal Trades Award. All of these matters were references under Section 34 of the Conciliation and Arbitration Act from the appropriate Commissioner.

During a debate as to whether these matters should be heard together, it became apparent that the applicants in respect of Part II. of the Metal Trades and Aircraft Industry Awards and the Bank Officials' Award desired to ask only for an interim increase in margins at that stage. The employers submitted that the applicants should be required to submit their whole case. The Commission decided to hear all the matters together, permitting the applicants in these three cases to ask first for an interim decision, it being understood that those applicants would have to satisfy the Commission that a case had been made out for an interim increase.

On 27th November, 1959, judgments were delivered in connexion with two of the five cases before the Commission, namely, those concerning margins in the Metal Trades Award Part I. and the Gold and Metalliferous Mining Award. This was done to avoid delay and to give parties to the other three cases the opportunity of making further submissions in the light of the decisions (and reasons for the decisions) in these two cases.

A summary of the Metal Trades Case, Part I., is given in the following paragraphs.

The employee organizations claimed an increase in the margin for the fitter, as set out in the Metal Trades Award, 1952 (i.e., the award as it existed prior to the Metal Trades Case, 1954—see para. 2, page 446), from 52s. to 134s. a week and an increase of 157 per cent. in the margins for other classifications. The employers counter-claimed for a reduction in margins of 15s. a week.

Counsel for the unions put broadly a case that in the proper fixation of margins the basic criteria were the market value at the time of the fixation of the wage and the economic capacity of the economy to pay the wages claimed and he alleged that the 1954 Metal Trades decision had departed from these principles. He produced to the Commission material to demonstrate the economic situation which would justify the increases asked for. He also submitted that the true relativities in the Metal Trades Award should be those created by a combination of the 1947 Full Court decision and the second variation order made in 1947 by G. A. Mooney, C.C.*

The employers adopted the view that no case had been made out for any increase and that there should be wage reductions. They also supplied the Commission with economic material in support of their case that there was no capacity in the community to sustain increased margins and alternatively that any increased economic capacity which may have occurred since 1954 had been exhausted by basic wage fixations.

As to relativities the employers submitted that the 1954 decision should be adhered to and should be carried to its logical conclusion in so far as the lower paid classifications were concerned.

The Attorney-General of the Commonwealth intervened and not only submitted statistical material and an analysis of the economic situation but also assisted the Commission with an exposition of various factors proper to be taken into account in the fixation of margins. In particular, counsel for the Attorney-General emphasized the desirability of flexibility in the workings of the arbitration system.

In the judgment, delivered on 27th November, 1959, the Commission rejected the employers' application to reduce wages under the Metal Trades Award and made an order re-assessing the marginal structure in the award by increasing the existing margins by 28 per cent., the amount of the increase being taken to the nearest 6d. The new margins applied from the beginning of the first full pay-period commencing in December, 1959. The effect of this decision was to increase the margin of the fitter from 75s. to 96s. a week.

The Commission stated that, not having before it the question of work values, and having decided not to alter the 1954 relativities, the increases had been expressed as a percentage of current margins, but this was not to be taken as an endorsement of that method of fixing margins.

In view of the widespread effects of this judgment some extensive extracts from it are given below:—

Functions of the Commission.—"We find it necessary to make a few general remarks about the functions of the Commission in view of some of the submissions which have been made to us . . . The true function of the Commission is to settle industrial disputes. In the settlement of disputes involving payment of wages, such as this one in which such issues have been raised, the Commission will bear in mind the various economic submissions made to it, including those about price rises and inflation; it will also bear in mind the fiscal and economic policies of the Government. It will not ignore the consequences to be expected

* *Commonwealth Arbitration Reports*, Vol. 59, p. 1272.

from its actions but it will not deliberately create situations which would need rectification by Governmental action. It will not use its powers for the purposes of causing any particular economic result apart from altered wages although in the event the decision it makes may have other economic consequences”.

Principles of Marginal Fixation.—“In the discharge of our function of settling the particular disputes before us and as this is the first occasion on which this Commission constituted as a full bench has been called upon to deal with a major case concerning general marginal principles we propose to deal with some of the submissions which have been put to us as to general principles. We would, however, emphasize that we do not regard what we have to say as exhausting the subject of marginal fixations.”

“In our view there is no real reason why a margin should be expressed as a percentage of the basic wage, and it would be unwise to express any margin in that way.

A closely related question is whether margins should be increased merely because of the decreased purchasing power of money since last fixed. We were referred to the 1954 Margins Judgment and other judgments on that point (*see* 80 C.A.R. 1 at pp. 30 and 31 and the judgments there cited). If those judgments do no more than reject the automatic or mathematical approach, that is, reject the proposition that a margin should be fixed merely by multiplying an existing margin by whatever is necessary to make up the decrease in purchasing power of money, we agree with them. If those judgments suggest that the decrease in purchasing power is not a factor to be taken into account at all, we find ourselves unable to agree with them. Whenever a margin is fixed, it is fixed in current money terms and if no account at all is taken of the decreased purchasing power of money since the margin was last assessed, then the fixation would not be a real one. Whenever a margin is under review, some account must be taken of the amount at which the margin was originally fixed and of the decrease in purchasing power of money since then, if in fact it has decreased. Although this concept is capable of being expressed shortly, its application in practice is complicated by the lack of any adequate measure of the decreased purchasing power of money. In arriving at the rates we award we have taken into account the fact that there has been a significant fall in real value of the current margins since they were fixed.”

“The proceedings before us were largely taken up with submissions regarding economic capacity and a question arose whether in these proceedings we should look at the capacity of the economy generally, the capacity of the particular industry or industries covered by the awards in question, or both. Historically it would appear that prior to 1947 it had been the practice, in the Metal Trades industry at least, to look at the economic situation of the industry itself.”

“This seemed to be the approach until 1947 when the Court looked at both the economic capacity of industry generally and the capacity of the particular industry (58 C.A.R. 1088 at p. 1090). It was not until 1954 that the Court considered only the capacity of industry generally and did not concern itself with the capacity of the Metal Trades industry as such. It must be borne in mind that in the 1954 Metal Trades case the Court proceeded to lay down a formula intended, speaking generally, for all industry. In such a context, consideration of the economic position of a particular industry would not be relevant. We do not think it could be said that the economic capacity of a particular industry could not be relevant in a particular case . . . Economic capacity, either generally or in a particular industry, may not be an issue at all in the fixation of margins. In many cases in the past margins have been fixed without consideration of capacity and we see no reason why in appropriate circumstances that practice should not continue.”

“Although this may not be a principle of marginal fixation, we find it convenient here to deal with the submission made by the employers, that even if there had been capacity to pay increased wages, that capacity had been exhausted by basic wage decisions in recent years. In making this submission they relied both on economic material and on statements in the judgments, particularly in the 1958 Basic Wage Judgment (Print A 6079).

We would think it clear that neither the Court nor the Commission has ever talked in terms of “exhausting” the capacity of the economy as far as wages generally are concerned when fixing a basic wage. The reference on p. 8 of the 1958 Basic Wage Judgment to marginal claims refutes any suggestion that in that case the Commission believed it was exhausting the capacity of the economy with its basic wage decision.”

Relativities.—“The Unions sought in these proceedings to have restored the relativities within the marginal structure of the Metal Trades Award which existed prior to the 1954 decision, that is, a combination of the Full Court’s 1947 decision and the second Mooney formula.”

“The employers not only relied on the relativities created in 1937 and confirmed in 1954, except as to the lower paid classifications, but also asked us to take the 1954 relativities to their logical conclusion in our decision in this matter as far as those classifications are concerned.

The difference between margins in an award occurs because the award maker has decided that there is a difference in the amounts to be awarded for skill, arduousness and other like factors proper to be taken into account in fixing a secondary wage. In origin, at least, relativities in margins are merely an expression of relative work values and there is before us no evidence of such present values.

We are therefore in this position. We have the 1954 award, which for the past five years has regulated the relativities of margins in this industry. In these proceedings, the real criterion for relativities, namely, work value, does not fall for decision. We have been asked on the one hand to go behind the 1954 decision and to restore the relativities which that decision changed and on the other hand to extend the reasoning of the 1954 Judgment to margins which the Court was not then prepared to reduce.

In all the circumstances we are not prepared to accede either to the Unions' submissions or to the employers' submission in this regard, and we have accepted the relativities established by the 1954 decision except to the extent necessary to round some of the figures off.

The question of relativities in margins in the Metal Trades Award, based on work value, is thus still open."

Over-Award Payments.—"The question of over-award payments is a complex one. The material before us is fragmentary and incomplete and it contains difficulties because many of the descriptions used were not defined in advance and may mean different things in different places. From the very nature of things it may not be possible to obtain precise and complete information from Union sources. Nevertheless, we feel that the material put before us by the Unions on this occasion, unanswered by evidence from the employers, is helpful to the extent indicated hereafter. The question of what is in fact being paid in an industry has been regarded as a relevant consideration in wage fixation by the Commonwealth Court of Conciliation and Arbitration. It has been regarded as relevant even when the amounts paid were obtained under pressure. See Metal Trades case (37 C.A.R. 176 at p. 182) and Bank Officials' case (34 C.A.R. 843 at p. 849)."

"We have given earnest consideration to the question whether this Commission should pay regard to payments which have been obtained by duress. From the economic point of view it seems hardly open to question that the means by which over-award payments of sufficient duration were obtained is irrelevant when one is concerned with discovering economic capacity. The mere fact that such amounts are being paid and have been paid over an appreciable period is sufficient to demonstrate capacity. We would point out, however, that the over-award payments with which we are dealing, are, in the main, over-award payments which have been built up over the past five years since the 1954 Metal Trades Award was made. If, in that time, the Unions concerned in the applications before us had applied their energies to seeking relief in this tribunal instead of seeking to obtain relief by direct action it may well be that instead of an incomplete and fragmentary picture of over-award payments, identifiable and general increased payments might have been obtained through the processes of arbitration.

We have been unable on the material before us to arrive at any figure which could be said to be a reliable average over-award payment for any classification. The most we are able to say in the context of our general industrial knowledge is that in the Metal Trades industry there are over-award payments of varying amounts in quite a number of establishments. We have taken this factor, indefinite though it is, into account in arriving at our decision."

Economic Considerations.—Counsel for the unions took as the starting point for his economic submissions the year in which, he said, rates had last been properly fixed in the award, namely, 1947. He submitted that there had been a remarkable improvement in the economy since that date, and that over the period since then the economy had shown itself able to sustain the increases in margins claimed.

The employers took as their starting point 1954, the year in which margins were last fixed in this industry, and submitted that capacity had not improved since that time.

In reviewing the economic situation, the Commission considered the current position in the light of information which had become available since the 1959 Basic Wage Judgment. After considering various indicators of the state of the economy the Commission discussed the problems of inflation and the maintenance of economic stability. The Commission stated its views as follows:—

"We are conscious of the desirability of attempting to maintain the economic stability which this country has achieved. We are also conscious of the desirability of ensuring that wage justice should be done to employees under this Award. We have looked at the increases which we propose to grant in this case in the light of the submissions about economic stability and we do not consider that such increases are so likely to affect that stability that the economy will be adversely affected. If marginal increases cannot be granted in times of economic prosperity such as the present, it is difficult to imagine when they can be granted."

"We have considered, with the qualifications already mentioned in this Judgment, the decrease in the purchasing power of money which has occurred since the 1954 marginal fixation, we have assessed as well as we are able to the increased capacity which has occurred in the Australian economy since that time and the fact that productivity has played its part in that increase of strength, and we have considered the Basic Wage decisions and appraisals of the economy by the Court and the Commission since 1954. In the result we have thought it proper to increase margins in the Metal Trades industry in the particular circumstances which confront us by an amount which exceeds the loss in purchasing power of the 1954 margins which excess we consider has been earned by the contribution of the employees to productivity increases and made possible by the additional strength of the national economy."

Conclusion.—"In view of all the foregoing we have come to the conclusion that the employers' application to reduce wages under this award should be rejected and that increases in margins may properly be granted. We have tested the amount of increase to be awarded by taking certain representative classifications for which we award the following increases:—

						Present Margin.	Increase.	New Margin.
						s.	s. d.	s. d.
Duster	125	35 0	160 0
Forger	105	29 6	134 6
Fitter	75	21 0	96 0
Machinist—2nd class	50	14 0	64 0
Process worker	22	6 0	28 0

It will be seen that these new margins represent an increase of 28 per cent. and we award for all other classifications adjustments of 28 per cent. on current margins, the amount of the increase to be taken to the nearest 6d."

"The order giving effect to this decision will be settled by the Registrar with recourse if necessary to a member of this bench and will be expressed as a variation of the existing Award the period of operation being until 30th November, 1961."

Judgment was also delivered on 27th November, 1959, in connexion with the application for variation of margins in the Gold and Metalliferous Mining Award. The margin for the miner was increased from 32s. to 42s. 6d. a week from the beginning of the first full pay-period commencing in December, 1959. Marginal claims for other classifications were referred back to the appropriate Commissioner for consideration.

The Commission delivered a judgment on the application for interim increases with regard to the Metal Trades Award, Part II., the Aircraft Industry Award, Part II. and the Bank Officials' Award on 11th December, 1959. After considering the principles to be applied in determining whether interim increases should be made and, if so, how they should be assessed, the Commission concluded that interim increases should be granted, as follows:—

Metal Trades Award, Part II. and Aircraft Industry Award, Part II.—A 20 per cent. increase in margins to graduates and diplomates, payable as from the beginning of the first full pay-period commencing in December, 1959.

Bank Officials' Award.—A 20 per cent. increase in margins to officers in the 10th to 18th year of service inclusive and to accountants and managers, payable retrospectively as from 11th June, 1959. Increases were not awarded to more junior officers, nor to females.

E. EMPLOYMENT AND UNEMPLOYMENT.

§ 1. Employment.

1. *Total Occupied Persons.*—(i) *General.* The total number of occupied persons in Australia is obtained from the results of each population Census, supplemented by data in respect of Australian defence personnel serving outside Australia, who, in accordance with usual Census procedure, are not recorded in the Census. The figures shown below in sub-para. (ii) and (iii) are derived from the 1933, 1947 and 1954 Censuses, after making the adjustments referred to in the notes to the tables and in the accompanying text (sub-para. (ii)). For this reason and because of the distribution of "not stated" (see p. 313) they differ from the Census figures shown in Chapter IX.—Population.

(ii) *Australia.* The figures in the table below are divided into three categories:— (a) defence forces; (b) all persons fully occupied as employers, or as self-employed in businesses or on farms; and (c) wage and salary earners employed, or occupied as casual, part-time, intermittent or seasonal workers. "Unemployed" persons (*see* explanation on page 456) are excluded.

All unpaid "helpers" in non-rural industry have been included with wage and salary earners. Male unpaid "helpers" in rural industry have been included with employers and self-employed persons, as it is considered that the majority of these are sons or other close relatives of farmers working in *de facto* partnership, or as learners with the farm owner. Unpaid female "helpers" on farms are fairly numerous. Generally they are occupied mainly in home duties, and, with all other women occupied in unpaid home duties, have been excluded from the category of occupied persons.

(a) Includes those serving outside Australia. (b) Excludes approximately 10,300 males undergoing full-time National Service Training at the time of the Census. With the exception of full-time students these persons have been included in the figures of occupied civilians. (c) Includes females in private domestic service:—106,700 in 1933, 40,200 in 1947 and 29,600 in 1954. (d) Includes an estimate of 40,400 part-time workers not classified as wage earners at the Census.

The numbers of defence personnel serving outside Australia who were included in the defence forces shown in the table above were as follows:—1947, 13,843 males, 143 females; 1954, 5,841 males, 62 females.

During the fourteen years from 1933 to 1947, the number of persons actually occupied at work increased by 905,400, or by an average of 64,700 persons per annum, whilst during the seven years from 1947 to 1954, the increase amounted to 483,300 or 69,000 per annum. Practically all of the increase in the number of occupied persons during the years 1947 to 1954 was due to the growth of the total available work force. During the previous intercensal period (1933 to 1947), the increase in the number of persons occupied comprised approximately 400,000 persons who had been unemployed in 1933 and approximately 500,000 growth in the total available work force.

The total numbers of employers, self-employed and wage and salary earners of both sexes classified at the Census as engaged in agricultural, pastoral and dairying industries (excluding female "helpers"—*see* above) declined from 512,000 in 1933 to 460,600 in 1954. There was very little movement in the figures between 1947 and 1954.

The proportion of male employers and self-employed in industries other than rural declined from 20.1 per cent. of occupied civilian males in these industries in 1933 to 14.7 per cent. in 1947, and to 13.6 per cent. in 1954. The corresponding proportion of female employers and self-employed declined from 11.2 per cent. of all occupied females in non-rural industries in 1933 to 7.8 per cent. in 1947, and remained constant at 7.8 per cent.

in 1954. The increase in the number of male employers and self-employed in non-rural industries during the years 1947 to 1954 averaged only 4,300 a year. The average increase during the same period in the number of male wage and salary earners in these industries was 51,600 a year.

(iii) *States.* The following table shows the total numbers of occupied males and females in each State and Territory in June of 1947 and 1954, classified as defence forces, employers and self-employed persons, and wage and salary earners.

(a) Includes those serving outside Australia. (b) Excludes approximately 10,300 males undergoing full-time National Service Training at the time of the Census. See also footnotes to previous table.

The occupied population of Australia (including defence forces but excluding unemployed, pensioners, retired, persons of independent means and dependants) increased from 1947 to 1954 by 15.3 per cent. The percentage increase in each State and Territory was as follows:—New South Wales, 11.2; Victoria, 16.0; Queensland, 15.7; South Australia, 20.0; Western Australia, 25.8; Tasmania, 17.5; Northern Territory, 37.9; and Australian Capital Territory, 60.7.

2. Wage and Salary Earners in Civilian Employment.—(i) *General.* Monthly estimates of the number of wage and salary earners in civilian employment (excluding employees in rural industry and female private domestics) are obtained from three main sources, namely, (a) monthly data as to persons employed in factories as shown at annual Factory Censuses; (b) current monthly returns from Governmental Bodies; and (c) current monthly Pay-roll Tax returns. There are also some other direct records of monthly employment (e.g., for hospitals).

These are supplemented by estimates of the number of employees outside the ambit of the Factory Census, returns from Governmental Bodies and Pay-roll Tax returns. Monthly numbers of factory employees subsequent to June, 1959 are estimated and are subject to revision when the Factory Censuses for 1959-60 and ensuing years are tabulated.

The estimates of wage and salary earners in this section are compiled on an establishment or enterprise basis, and therefore do not cover exactly the same area of industry as do the relevant industry tabulations of the General Censuses of 1947 and 1954, which are based on the returns of individual employees.

The purpose of these estimates of employment is to measure, as nearly as may be with available data, current monthly *trends* in employment in the defined field. Industry groups herein are not identical in coverage with Census groups.

Pay-roll Tax returns are lodged by all employers paying more than £200 a week in wages, other than certain Commonwealth Government Bodies, religious and benevolent institutions, public hospitals and other similar organizations specifically exempted under the Pay-roll Tax Assessment Act 1941-1957.

(ii) *Australia: Industrial Groups.* The following table shows total male and female wage and salary earners in civilian employment (excluding employees in rural industry, female private domestics, permanent defence forces and National Service trainees in camp) subdivided to show the extent of employment provided by Government bodies and by private employers respectively. Principal industrial groups shown in the table include both private employees and Government employees, if any. (Current figures are published in the *Monthly Bulletin of Employment Statistics* and the *Monthly Review of Business Statistics*). The manufacturing employment figures published in this table comprise (i) the series showing actual monthly employment in factories as recorded at successive annual Censuses of Factories to June, 1959 (see Chapter VI.), with interim estimates for subsequent months, and (ii) estimates of the number of employees in industrial establishments outside the scope of the definition of a factory and persons employed by factory proprietors but engaged in selling and distribution, etc.

(iv) *Factories.* Actual monthly factory employment derived from the results of annual factory censuses is published in the Bulletin *Secondary Industries*, issued by this Bureau.

Additional tables regarding employment in factories may be found in Chapter VI.—*Manufacturing Industry.*

An index of factory employment in Australia, published in the *Monthly Review of Business Statistics*, shows that for the year 1958–59, the level of employment in factories was 99 per cent. higher than the average factory employment for the three years ended June, 1939.

3. *Government Employees.*—(i) *States and Territories.* The numbers of civilian employees of Commonwealth Government, State, Local and semi-Government authorities in each State and Territory at June, 1959 are shown in the following table. These include all employees of government authorities on services such as railways, tramways, banks, post office, air transport, education, broadcasting, television, police, public works, factories and munitions establishments, migrant hostels, etc., as well as administrative employees, within Australia.

CIVILIAN EMPLOYEES OF GOVERNMENT AUTHORITIES(a): JUNE, 1959.

1959 ..	172,398	46,898	219,296	386,407	89,344	475,751	71,340	7,219	78,559	630,145	143,461	773,606

(a) Includes semi-Government authorities. See explanation above.

§ 2. Unemployment.

The total number of persons “unemployed” has been recorded only at the dates of the various Censuses. Prior to the 1947 Census, persons who were “unemployed” were requested to furnish particulars of the cause and duration of unemployment, but from 1947 onwards the enquiry was broadened to include all persons (usually engaged in industry, business, trade, profession or service) who were out of a job and “not at work” at the time of the Census for whatever reason, including any not normally associated with unemployment. This change in the form of the questionnaire probably resulted in some variation in response. The following table sets out the number of persons recorded within these categories at the Censuses of 1933 to 1954. The percentage of “unemployed” at each date to all wage and salary earners, comprising those estimated to be in employment and those unemployed, is also shown.

UNEMPLOYMENT (ALL CAUSES): AUSTRALIA, CENSUSES, 1933, 1947 AND 1954.

Date.	Wage and Salary Earners Unemployed. ('000.)			Proportion of Wage and Salary Earners Unemployed. (Per Cent.)		
	Males.	Females.	Persons.	Males.	Females.	Persons.
June, 1933(a) ..	405.4	75.8	481.2	25.4	14.5	22.7
June, 1947(b) ..	66.6	16.9	83.5	3.5	2.5	3.2
June, 1954(b) ..	41.0	14.0	55.0	1.8	1.9	1.8

(a) As recorded at the Census. In addition there were considerable numbers of youths and young women of working ages who had never been employed and were "not at work" at the time of the Census.
 (b) Persons in the work force who were "not at work" (see explanation above) at the time of the Census.

The following table shows the numbers of males and females "unemployed" or "not at work" classified according to cause of unemployment at the Censuses of 1933, 1947 and 1954. The change in the form of questionnaire after 1933 should be borne in mind.

CAUSES OF UNEMPLOYMENT: AUSTRALIA, CENSUSES, 1933, 1947 AND 1954.

Year.	Unable to Secure Employment.	Temporarily Laid Off.	Illness.	Accident.	Industrial Dispute.	Other.	Total.
MALES.							
1933 ..	374,569	(a)	18,083	4,702	1,595	6,483	405,432
1947 (b) ..	17,314	12,458	14,639	2,985	475	(c)18,743	66,614
1954 (b) (d) ..	9,912	4,423	11,879	2,804	344	(c)11,652	41,014
FEMALES.							
1933 ..	62,630	(a)	9,193	434	95	3,465	75,817
1947 (b) ..	2,254	2,449	4,396	280	24	(c) 7,512	16,915
1954 (b) (d) ..	3,685	1,386	4,310	318	17	(c) 4,284	14,000

(a) Not available. (b) See note (b) to previous table. (c) The majority of these persons were resting between jobs or changing jobs. (d) Revised since previous issue.

Details of the number of persons receiving unemployment and sickness benefits and the payments made may be found in Chapter XVIII.—Welfare Services.

§ 3. Commonwealth Employment Service.

Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the Re-establishment and Employment Act 1945-1958 (sections 47 and 48). In brief, the main functions of the Service are to assist people seeking employment to obtain positions best suited to their training, experience, abilities and qualifications; and to assist employers seeking labour to obtain employees best suited to the demands of the employers' particular class of work.

The organization and functions of the C.E.S. accord with the Employment Service Convention 1948 and Recommendation 1948 of the International Labour Organization, which were respectively ratified and adopted by Australia in December, 1949.

The C.E.S. functions within the Employment Division of the Department of Labour and National Service, on a four-tiered decentralized basis. The Central Office is in Melbourne and there is a Regional Office in the capital city of each State, with 120 District Employment Offices in suburban and the larger provincial centres and 341 agents in the smaller country centres. The District Employment Offices are distributed as follows: New South Wales, 47; Victoria, 31; Queensland, 19; South Australia, 8; Western Australia, 9; Tasmania, 4; Northern Territory, 1; Australian Capital Territory, 1.

The C.E.S. provides specialized facilities for young people, persons with physical and mental handicaps, ex-service personnel, migrants, rural workers and persons with professional and technical qualifications.

Vocational guidance is provided by the C.E.S., free of charge, by a staff of qualified psychologists. It is available to any person, but is provided particularly for young people, ex-servicemen and the physically handicapped. In New South Wales the State Department of Labour and Industry offers a similar service, mainly to young people leaving school.

The C.E.S. has responsibilities in the administration of the unemployment and sickness benefits provided under the Social Services Act 1947-1959. All applicants for benefits must register at a District Employment Office or agency of the C.E.S., which is responsible for certifying whether or not suitable employment can be offered to them.

The C.E.S. is responsible for placing in employment migrant workers sponsored by the Commonwealth under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and for their admission, if necessary, to Commonwealth migrant hostels. Assistance to obtain employment is provided to other migrants as required. From the inception of the various free and assisted schemes, including the Displaced Persons Scheme, to the end of December, 1959, about 191,000 British and European migrant workers had been placed in employment by the C.E.S.

Since 1951, the C.E.S. has been responsible for recruiting Australian experts for overseas service under the Colombo Plan and the United Nations Expanded Programme of Technical Assistance. The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health and economic and scientific research and development.

In association with its placement activities, the C.E.S. carries out regular surveys of the labour market and supplies detailed information to interested Commonwealth and State Government Departments and instrumentalities and to the public. It also advises employers, employees and other interested persons on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

The Service completed its thirteenth year of operation in May, 1959. During the year ended 31st December, 1959, there were 749,236 applicants who registered for employment, of whom 509,063 were referred to employers and 353,926 placed in employment. New vacancies notified numbered 494,145 and vacancies unfilled at the end of December, 1959, 37,516.

Prior to the setting up of the Commonwealth Employment Service, State Labour Exchange Organizations existed in several States, but they have been superseded. Details of the organization and administration of these exchanges were given in *Labour Report*, No. 30, page 133.

§ 4. Industrial Disputes.

1. **General.**—Detailed information regarding industrial disputes involving stoppage of work is given in the *Labour Report*.

Particulars of all disputes in progress during the year are included in the annual figures whether the dispute commenced in that year or was in progress at the beginning of the year. Consequently, details of "the number of disputes" and "workers involved" in disputes which commenced in any year and were still in progress during the following year will be included in the figures for both years.

2. **Industrial Groups.**—The following table gives, for Australia as a whole, particulars of industrial disputes which were in progress during 1959, classified according to industrial groups. The industrial groups have been rearranged to conform, as nearly as may be, with the order adopted in other tables in this chapter. However, the figures for each industrial group shown are comparable with those published in previous issues.

INDUSTRIAL DISPUTES(a): INDUSTRIAL GROUPS, AUSTRALIA, 1959.

Industrial Group.	Number.	Workers Involved.			Working Days Lost.	Estimated Loss in Wages. (£).
		Directly.	In-directly. (b)	Total.		
Agriculture, Grazing, etc.	1	820	..	820	410	1,353
Coal Mining	330	42,705	..	42,705	69,648	262,477
Other Mining and Quarrying	15	10,654	..	10,654	18,106	96,043
Engineering, Metal Works, etc. ..	88	29,592	804	30,396	88,685	314,075
Textiles, Clothing and Footwear ..	8	1,510	80	1,590	3,732	15,044
Food, Drink and Tobacco	78	24,095	4,701	28,796	51,492	188,735
Sawmilling, Furniture, etc.
Paper, Printing, etc.	1	240	..	240	1,030	3,500
Other Manufacturing	50	7,884	2,179	10,063	35,437	134,235
Building and Construction	38	8,922	186	9,108	21,507	90,266
Railway and Tramway Services ..	31	18,074	39	18,113	5,503	17,486
Road and Air Transport	16	2,829	..	2,829	2,373	6,771
Shipping	6	309	..	309	720	2,609
Stevedoring	189	72,345	..	72,345	58,695	217,101
Hotels, etc. and Personal Service ..	3	7,101	13	7,114	3,706	12,380
Other Industries (c)	15	2,389	..	2,389	3,995	15,145
Total	869	229,469	8,002	237,471	365,039	1,377,220

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute. (c) Includes Communication; Finance and Property; Wholesale and Retail Trade; Public Administration and Professional Services; and Amusement, Sport and Recreation.

A graph showing, for the years 1950 to 1959, the working days lost as a result of industrial disputes in the main industrial groups will be found on page 422.

3. **States and Territories.**—The following table gives particulars of the number of industrial disputes in each State and Territory, together with the number of workers involved, and the losses in working days and wages caused by disputes which were current during each of the years 1956 to 1959.

INDUSTRIAL DISPUTES(a): STATES AND TERRITORIES.

State or Territory.	Year.	Number.	Workers Involved.			Working Days Lost.	Estimated Loss in Wages. (£)
			Directly.	Indirectly. (b)	Total.		
New South Wales ..	1956	878	219,458	6,796	226,254	611,279	2,199,764

	1958	987	275,573	7,276	282,849	439,890	1,590,603
	1959	869	229,469	8,002	237,471	365,039	1,377,220

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute.

4. Duration.—The following table gives particulars of industrial disputes during 1959 in the three groups "Coal Mining", "Stevedoring" and "Other Industries", classified according to duration. This dissection has been made because the pattern of the disputes in coal mining and stevedoring differs significantly from that in other industries.

DURATION OF INDUSTRIAL DISPUTES(a): AUSTRALIA, 1959.

Duration.(b)	Coal Mining.	Stevedoring.	Other Industries.	All Industries.
1 day and less	219	141	151	511
2 days and more than 1 day	59	36	62	157
3 days and more than 2 days	20	10	35	65
Over 3 days and less than 1 week	10	1	34	45
1 week and less than 2 weeks	16	1	45	62
2 weeks and less than 4 weeks	5	..	13	18
4 weeks and less than 8 weeks	1	..	9	10
8 weeks and over	1	1
Total	330	189	350	869

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) One week equals five working days.

DURATION OF INDUSTRIAL DISPUTES(a): AUSTRALIA, 1959—continued.

Duration.(b)	Coal Mining.	Stevedoring.	Other Industries.	All Industries.
WORKERS INVOLVED(c).				
1 day and less	29,490	62,090	68,052	159,632
2 days and more than 1 day	5,436	7,167	28,402	41,005
3 days and more than 2 days	4,079	2,411	8,966	15,456
Over 3 days and less than 1 week	1,650	90	5,547	7,287
1 week and less than 2 weeks	1,729	587	8,408	10,724
2 weeks and less than 4 weeks	295	..	1,955	2,250
4 weeks and less than 8 weeks	26	..	603	629
8 weeks and over	488	488
Total	42,705	72,345	122,421	237,471

WORKING DAYS LOST.

1 day and less	28,377	37,555	41,640	107,572
2 days and more than 1 day	9,688	10,975	41,425	62,088
3 days and more than 2 days	10,029	6,681	23,269	39,979
Over 3 days and less than 1 week	6,277	315	19,875	26,467
1 week and less than 2 weeks	11,178	3,169	50,745	65,092
2 weeks and less than 4 weeks	3,449	..	21,803	25,252
4 weeks and less than 8 weeks	650	..	14,289	14,939
8 weeks and over	23,650	23,650
Total	69,648	58,695	236,696	365,039

(a) Refers only to disputes involving a stoppage of work of 10-man-days or more. (b) One week equals five working days. (c) Includes workers indirectly involved. See note (b) to previous table.

5. Causes.—(i) *General.* In issues of the Official Year Book prior to No. 40 the causes of industrial disputes were classified in some detail for all industries combined. As from 1950, however, stoppages have been analysed in three separate groups, "Coal Mining", "Stevedoring" and "Other Industries".

Under this classification, causes are grouped under four main headings:—(1) Wages, Hours and Leave; (2) Physical Working Conditions and Managerial Policy; (3) Trade Unionism; (4) Other Causes. The first group is restricted to disputes involving general principles relating to wages, hours and leave; minor questions regarding the claims to pay or leave by individual employees are included under managerial policy. The second group comprises disputes regarding physical working conditions and general questions of managerial policy, which term covers disciplinary action, the promotion of employees, the employment of particular individuals, personal disagreements between employees and supervisory staff and disputes arising from the computation of wages, leave, etc., in individual cases. The third group includes stoppages over employment of non-unionists, inter-union and intra-union disputes, disputes over recognition of union activities, and sympathy stoppages in support of employees in another industry. The last group comprises disputes by way of protest against situations not arising from the usual relationship of employer and employee, e.g., political matters, and cases (occurring mainly in the coal mining industry) where the cause of the stoppage is not officially made known to the management.

As the items included under these headings differ somewhat from those included under the similar headings used for classifying causes of disputes in years prior to 1950, figures for 1950 and subsequent years are not strictly comparable with those for earlier years.

(ii) *Industry Groups.* The following table shows particulars of industrial disputes for 1959 classified according to cause in three industry groups:—

CAUSES OF INDUSTRIAL DISPUTES(a): AUSTRALIA, 1959.

Cause of Dispute.	Coal Mining.	Stevedoring.	Other Industries.	All Industries.
NUMBER OF DISPUTES.				
Wages, Hours and Leave	19	7	79	105
Physical Working Conditions and Managerial Policy ..	194	144	218	556
Trade Unionism	37	19	30	86
Other	80	19	23	122
Total	330	189	350	869
WORKERS INVOLVED.(b)				
Wages, Hours and Leave	5,084	19,009	50,234	74,327
Physical Working Conditions and Managerial Policy ..	18,138	36,929	53,772	108,839
Trade Unionism	3,406	9,020	9,138	21,564
Other	16,077	7,387	9,277	32,741
Total	42,705	72,345	122,421	237,471
WORKING DAYS LOST.				
Wages, Hours and Leave	7,602	13,178	97,230	118,010
Physical Working Conditions and Managerial Policy ..	36,899	31,752	116,631	185,282
Trade Unionism	6,167	10,309	12,350	28,826
Other	18,980	3,456	10,485	32,921
Total	69,648	58,695	236,696	365,039

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Includes workers indirectly involved. See note (b) to table at top of page 460.

(iii) *Summary, 1955 to 1959.* The following table gives particulars of industrial disputes according to cause for the years 1955 to 1959.

CAUSES OF INDUSTRIAL DISPUTES(a): AUSTRALIA.

Cause of Dispute.	1955.	1956.	1957.	1958.	1959.
NUMBER OF DISPUTES.					
Wages, Hours and Leave	201	107	75	73	105
Physical Working Conditions and Managerial Policy	887	792	674	630	556
Trade Unionism	172	106	70	80	86
Other	272	301	284	204	122
Total	1,532	1,306	1,103	987	869
WORKERS INVOLVED.(b)					
Wages, Hours and Leave	139,522	130,526	62,708	15,861	74,327
Physical Working Conditions and Managerial Policy	184,449	149,208	151,863	158,729	108,839
Trade Unionism	37,998	19,816	13,612	16,432	21,564
Other	82,678	128,433	108,860	91,827	32,741

Total	1,010,884	1,121,383	630,213	439,890	365,039

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Includes workers indirectly involved. See note (b) to table at top of page 460.

6. Results.—In issues of the Official Year Book prior to No. 40, tables were included showing analyses of the results of industrial disputes over a period of years. This tabulation was discontinued because of the difficulty of obtaining the details necessary to make a classification in precise terms of the results of industrial disputes.

7. **Methods of Settlement.**—The following table shows particulars of industrial disputes for 1959 classified according to method of settlement, in three industry groups:—

INDUSTRIAL DISPUTES(a): METHODS OF SETTLEMENT, AUSTRALIA, 1959.

Method of Settlement.	Coal Mining.	Stevedoring.	Other Industries. (b)	All Industries. (b)
NUMBER OF DISPUTES.				
1. By private negotiation	83	3	106	192
2. By mediation not based on legislation	1	..	1	2
3. State legislation—				
(a) Under State Conciliation, etc., legislation ..	1	..	78	79
(b) By reference to State Government officials	1	1
4. Commonwealth and Commonwealth-State legislation—				
(a) Industrial Tribunals under—				
(i) Conciliation and Arbitration Act	1	56	57
(ii) Coal Industry Acts	22	22
(iii) Stevedoring Industry Act	1	..	1
(iv) Other Acts	1	1
(b) By reference to Commonwealth Government officials	76	..	76
5. By filling places of workers on strike or locked out
6. By closing down establishment permanently
7. By resumption without negotiation	223	108	105	436
8. By other methods
Total	330	189	348	867

WORKERS INVOLVED.(c)

(ii) Coal Industry Acts	2,301	2,301
(iii) Stevedoring Industry Act	62	..	62
(iv) Other Acts	25	25
(b) By reference to Commonwealth Government officials	9,624	..	9,624
5. By filling places of workers on strike or locked out
6. By closing down establishment permanently
7. By resumption without negotiation	33,686	60,642	70,971	165,299
8. By other methods
Total	42,705	72,345	122,237	237,287

WORKING DAYS LOST.

1. By private negotiation	13,796	4,767	57,116	75,679
2. By mediation not based on legislation	162	..	800	962
3. State legislation—				
(a) Under State Conciliation, etc., legislation ..	1,096	..	58,879	59,975
(b) By reference to State Government officials	125	125
4. Commonwealth and Commonwealth-State legislation—				
(a) Industrial Tribunals under—				
(i) Conciliation and Arbitration Act	315	58,423	58,738
(ii) Coal Industry Acts	10,166	10,166
(iii) Stevedoring Industry Act	47	..	47
(iv) Other Acts	50	50
(b) By reference to Commonwealth Government officials	11,803	..	11,803
5. By filling places of workers on strike or locked out
6. By closing down establishment permanently
7. By resumption without negotiation	44,428	41,763	59,819	146,010
8. By other methods
Total	69,648	58,695	235,212	363,555

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Two disputes which commenced in 1959 were not settled at the end of the year, therefore the totals shown do not agree with totals for other tables. (c) Includes workers indirectly involved. See note (b) to table at top of page 460.

F. WORKERS' COMPENSATION LEGISLATION.

A conspectus of the principal provisions of Workers' Compensation Acts in force in Australia at 30th June, 1958, will be found in *Labour Report* No. 46, pages 139–147.

G. LABOUR ORGANIZATIONS.

§ 1. Labour Organizations in Australia.

1. **Registration.**—(i) *Under Trade Union Acts.* In earlier issues of the Official Year Book (see No. 39, p. 448) reference was made to the registration of trade unions under the Trade Union Acts. In general the available information is inadequate for statistical purposes.

(ii) *Under State Industrial Legislation.* Information with regard to registrations of employers' associations and trade unions under the various State Industrial Arbitration Acts will be found in earlier issues of the Official Year Book (see No. 39, p. 448).

(iii) *Under the (Commonwealth) Conciliation and Arbitration Act.* Under Part VIII. of the Conciliation and Arbitration Act 1904–1958, any association of employers in any industry who have, or any employer who has, employed, on an average taken per month, not less than 100 employees during the six months preceding application for registration, or any association of not less than 100 employees in any industry, may be registered. However, under the Public Service Arbitration Act an association of less than 100 employees may be registered as an organization, provided that its members comprise at least three-fifths of all persons engaged in that industry in the Service. Such organizations are included in the figures shown below. Registered unions include both interstate associations and associations operating within one State only. Registration under Commonwealth legislation began in 1906. At the end of 1959, the number of employers' organizations registered under the provisions of the Conciliation and Arbitration Act was 61. The number of unions of employees registered at the end of 1959 was 157, with a membership of 1,504,091, representing 81 per cent. of the total membership of all trade unions in Australia.

2. **Particulars regarding Trade Unions.**—(i) *Types.* The trade unions in Australia are very diverse in character, and range from the small independent association to the large interstate organization, which, in its turn, may be a branch of an international body. Broadly speaking, there are four distinct classes of labour organizations:—(i) the local independent; (ii) the State; (iii) the interstate; and (iv) the Australasian or international; but a number of variations occur from each of these classes. The schemes of organization of interstate or federated unions vary greatly in character. In some unions, the State organizations are bound together under a system of unification with centralized control, while in others the State units are practically independent and self-governing, the federal bond being loose and existing only for one or two specified purposes.

(ii) *Number and Membership.* Returns showing membership by States as at 31st December each year are obtained for all trade unions and employee organizations. The affairs of single organizations are not disclosed in the published results and this has assisted in securing complete information. The Bureau is indebted to the secretaries of trade unions for their co-operation in supplying information. The following table shows the position at the end of each of the years 1957 to 1959.

TRADE UNIONS: NUMBER AND MEMBERSHIP.

State or Territory.	Number of Separate Unions.(a)			Number of Members.			Percentage Increase in Membership.(b)		
	1957.	1958.	1959.	1957.	1958.	1959.	1957.	1958.	1959.
New South Wales ..	235	231	234	737,358	731,375	741,610	— 0.2	— 0.8	1.4
Victoria ..	162	161	159	443,040	444,150	461,314	0.4	0.3	3.9
Queensland ..	133	131	129	310,821	313,744	322,150	— 1.3	0.9	2.7
South Australia ..	137	136	135	144,914	147,029	147,093	— 1.9	1.5	0.0
Western Australia..	156	156	154	114,095	114,494	114,497	3.3	0.3	0.0

Australia ..	373	370	369	1,810,154	1,811,218	1,850,727	— 0.1	0.1	2.2

(a) Without interstate duplication. See letterpress below.

(b) On preceding year.

NOTE.—Minus sign (—) denotes decrease.

In the preceding table, under the heading "Number of Separate Unions", a union reporting members in a State is counted as one union within that State. The figures by States do not add to the Australian total (shown in the last line) because a union represented in more than one State is included in the figure for each State in which it is represented, but is counted only once in the Australian total.

The collection of statistics relating to the number of branches of trade unions, appearing in issues of the Official Year Book prior to No. 39, has been discontinued.

(iii) *Classification in Industrial Groups.* The following table shows the number of unions and members thereof in Australia at the end of each of the years 1957 to 1959. Compared with that in 1939, membership in 1959 had increased by 102 per cent.

The industrial groups have been rearranged to conform, as nearly as may be, with the order adopted in other tables in this chapter. However, the figures for each industrial group shown are comparable with those published in previous issues.

TRADE UNIONS: INDUSTRIAL GROUPS, AUSTRALIA.

Industrial Group.	1957.		1958.		1959.	
	No. of Unions. (a)	No. of Members.	No. of Unions. (a)	No. of Members.	No. of Unions. (a)	No. of Members.

Hotels, etc. and Personal Service ..	12	39,196	12	40,441	13	41,709
Other Industries(c)	53	145,904	52	149,407	53	153,786
Total	373	1,810,154	370	1,811,218	369	1,850,727

(a) Without interstate duplication. See letterpress above. (b) Includes Communication and Municipal, etc. (c) Includes Professional Services; and Amusement, Sport and Recreation.

(iv) *Number of Members and Proportion of Wage and Salary Earners.* The following table shows the estimated percentages of wage and salary earners in employment who are members of trade unions. As current estimates of wage and salary earners in employment do not include employees engaged in rural industry or females in private domestic service, the percentages have been calculated on figures obtained by adding to the end of year estimates the number of employees in rural industry and females in private domestic service recorded at the Census of 30th June, 1954. For this reason, and also because the membership of trade unions includes some persons not in employment, the percentages shown in the table must be regarded as approximations.

TRADE UNIONS: NUMBER OF MEMBERS AND PROPORTION OF TOTAL WAGE AND SALARY EARNERS, AUSTRALIA.

Year.	Number of Members.			Proportion of Total Wage and Salary Earners. (Per cent.)		
	Males.	Females.	Persons.	Males.	Females.	Persons.
1955	1,464,016	337,846	1,801,862	66	42	59
1956	1,470,606	340,802	1,811,408	66	42	59
1957	1,463,985	346,169	1,810,154	65	42	59
1958	1,465,682	345,536	1,811,218	65	41	58
1959	1,494,669	356,058	1,850,727	65	41	58

(v) *Interstate or Federated Trade Unions.* The following table gives particulars of the number and membership of interstate or federated trade unions in 1958 and 1959:—

INTERSTATE OR FEDERATED TRADE UNIONS(a): AUSTRALIA.

Particulars.	Unions Operating in—					Total.
	2 States.	3 States.	4 States.	5 States.	6 States.	
Number of Unions	1958 .. 13	12	20	33	63	141
	1959 .. 13	9	23	35	60	140
„ „ Members	1958 .. 31,348	64,983	206,572	385,246	887,929	1,576,078
	1959 .. 31,923	60,642	224,737	396,005	900,910	1,614,217

(a) Certain unions in this group have, in addition to branches in the States, branches in the Northern Territory and/or in the Australian Capital Territory.

The number of organizations operating in two or more States increased from 116 in 1939 to 140 in 1959, and the ratio of the membership of such organizations to the total membership of all organizations rose from 83 to 87 per cent. during the same period.

3. *Central Labour Organizations.*—Delegate organizations, consisting of representatives from a group of trade unions, have been established in each of the capital cities and in a number of industrial centres elsewhere. Their revenue is raised by means of a *per capita* tax on the members of each affiliated union. In most of the towns where such central organizations exist, the majority of the local unions are affiliated with the central organization, which is usually known as the Labour or the Trades Hall Council. In Western Australia, a unified system of organization extends over the industrial centres throughout the State. In this State, there is a provincial branch of the Australian Labour Party, having a central council and executive, and metropolitan and branch district councils, with which the local bodies are affiliated. The central council, on which all district councils are represented, meets periodically. In the other five States, however, the organization is not so close, and, while provision usually exists in the rules of the central council at the capital city of each State for the organization of district councils or for the representation of the central council on the local councils in the smaller industrial centres of the State, the councils in each State are generally independent bodies.

The table below shows the number of metropolitan and district or local labour councils, together with the number of unions and branches of unions affiliated therewith in each State and Territory at the end of the years 1958 and 1959:—

CENTRAL LABOUR ORGANIZATIONS: NUMBER, AND UNIONS AND BRANCH UNIONS AFFILIATED.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W.A.	Tas.	N.T.	A.C.T.	Total.
Number of Councils—									
1958	11	9	12	6	10	5	..	1	54
1959	11	9	12	6	10	5	..	1	54
Number of Unions and Branch Unions affiliated—									
1958	297	269	171	150	400	113	..	23	1,423
1959	297	284	178	160	384	111	..	23	1,437

The figures given in the preceding table concerning the number of unions do not necessarily represent separate unions, since the branches of a large union may be affiliated with the local trades councils in the several towns in which they are represented.

A Central Labour Organization, now called the Australian Council of Trade Unions, came into being during 1927. The Council was created to function on behalf of the trade unions of Australia, and was founded at an All-Australian Trade Union Congress held in Melbourne in May, 1927. The A.C.T.U. consists of affiliated unions and affiliated Metropolitan and/or State Labour Councils and Provincial Councils. The Metropolitan or State Labour Council in each State is the State Branch of the A.C.T.U. and has the right to appoint one representative to act on the executive of the Council. In addition to the representatives of the State Branches of the A.C.T.U., six delegates are elected by and from Congress, one from each of the following industry groups of unions:—Building, Food and Distributive Services, Manufacturing, Metal, Services, Transport. To this Executive are added the four officers, namely, President, two Vice-Presidents and Secretary, who are elected by and from the Australian Congress of Trade Unions.

The ordinary meetings of Congress are held in each alternate year. Special meetings of Congress shall be held whenever deemed advisable by decisions of the Executive, as approved by the majority of its branches, or by resolution of unions representing one-third of the total membership of the A.C.T.U.

The objectives of the A.C.T.U. are the socialization of industry, i.e., production, distribution and exchange, and the utilization of the resources of Australia for the benefit of the people—ensuring full employment, with rising standards of living, real security and full cultural opportunities for all. The methods to be adopted are:—the closer organization of the workers by the transformation of the Australian trade union movement from the craft to an industrial basis, by grouping of unions in their respective industries and by the amalgamation of unions with a view to the establishment of one union in each industry; the consolidation of the Australian Labour Movement, with the object of unified control, administration and action; the centralized control of industrial disputes; educational propaganda among unions; and political action to secure satisfactory working-class legislation.

The A.C.T.U. was the first interstate body in Australia with authority to deal with industrial matters of an interstate character affecting the trade union movement generally. It is also the body responsible for submitting to the Commonwealth Government the names of persons suitable for selection as the Australian workers' delegate to the annual International Labour Conference.

All the major unions are affiliated with the A.C.T.U., with the exception of the largest, the Australian Workers' Union, which is itself virtually a central organization of branches catering in the main for employees in rural and constructional pursuits.

Between the trade union and the central organization of unions may be classed certain State or district councils organized on trade lines, and composed of delegates from separate unions whose members' interests are closely connected because of their occupations. Delegate councils of bakers, bread carters and mill employees, or of unions connected directly or indirectly with the iron, steel, or brass trades, or with the building trades, may be so classed.

§ 2. International Labour Organization.

The International Labour Organization (I.L.O.) was established on 11th April, 1919, as an autonomous institution associated with the League of Nations. Its original constitution was adopted as Part XIII. of the Treaty of Versailles and formed part of other treaties of peace. During the years between its establishment and the outbreak of the 1939–45 War, the I.L.O., with headquarters at Geneva, played a leading role in promoting the improvement of labour conditions throughout the world.

In 1940, in order to ensure that the I.L.O. should be able to continue to function freely, a working centre was established at Montreal, Canada. In 1946, the Organization became the first of the specialized agencies of the United Nations. Under the terms of agreement, the United Nations recognizes the I.L.O. as a specialized agency having responsibility in the field defined by its constitution, which embraces labour conditions, industrial relations, employment organization, social security and other aspects of social policy. The Organization has three basic parts. These are the International Labour Conference, its highest

authority, which as a rule meets annually; the Governing Body, its executive council, which usually meets three times each year; and the International Labour Office, which provides the secretariat of the Organization. The Conference is composed of delegations from the Member States of the Organization. At the end of 1959, there were 80 Member States, each of which is entitled to be represented by four delegates—two Government, one representing employers and one representing workers, together with their advisers. Each delegate speaks and votes independently, so that all points of view in each country are fully expressed. The Governing Body consists of the representatives of twenty governments and ten employers' and ten workers' representatives. Of the twenty government representatives, half are from the ten countries of major industrial importance and ten are elected by the remaining governments. These latter ten government representatives and the ten employers' and ten workers' titular delegates and the deputy members of the three groups are elected by their groups at the Conference every three years. Since the 1939-45 War, Australia has alternated as a Member and Deputy Member of the government group, and is at present a Deputy Member. Particulars are given in *Labour Report* No. 47 of the proceedings of International Labour Conferences up to the 42nd Session, held in Geneva in June, 1959. For details of I.L.O. conventions ratified by Australia see *Labour Report* No. 47, Chapter V.

CHAPTER XIII.

TRADE.

§ 1. Introduction.

Constitutional Powers.—By the Commonwealth of Australia Constitution Act, section 51 (i.), the power to make laws with respect to trade and commerce with other countries was conferred on the Commonwealth Parliament. Under section 86 of the Constitution the collection and control of duties of customs and excise passed to the Executive Government of the Commonwealth on 1st January, 1901. Other references to trade and commerce are contained in sections 87 to 95 of the Constitution (*see* pp. 18–19).

§ 2. Commonwealth Legislation affecting Oversea Trade.

1. **General.**—The principal Acts affecting overseas trade at present in force are: The Customs Act 1901–1959; Customs Tariff 1933–1959; Customs Tariff (Canadian Preference) 1931 and Customs Tariff (Canadian Preference) 1934–1959; Customs Tariff (Industries Preservation) Act 1921–1957; Customs Tariff (New Zealand Preference) 1933–1959; Customs Tariff (Papua and New Guinea Preference) 1936–1959; Customs Tariff (Federation of Rhodesia and Nyasaland Preference) 1956–1958; Customs Tariff (Primage Duties) 1934–1958; Trading with the Enemy Act 1939–1957.

The Customs Act is the administrative Act under which the Department of Customs and Excise operates, while the Customs Tariffs provide the statutory authority for imposing the actual rates of duty operative from time to time.

2. **The Customs Tariff.**—(i) *General.* The first Commonwealth Customs Tariff was introduced by Resolution on 8th October, 1901, from which date uniform duties came into effect throughout Australia. The tariff has since been extensively amended. The Act at present in operation is the Customs Tariff 1933–1959.

The Australian Customs Tariff has been developed in conformity with the policy of protecting economic and efficient Australian industries and of granting preferential treatment to imports from certain countries of the British Commonwealth. Duties are also imposed on some goods, generally of a luxury nature, for revenue purposes. Customs collections are a major source of revenue, but in its protective character the tariff has an important influence on the Australian economy.

Australia has three classes of tariff—the British Preferential Tariff, the Intermediate Tariff and the General Tariff.

(ii) *British Preference.* British Preferential Tariff rates of duty apply to goods the produce or manufacture of the United Kingdom, provided that such goods comply with the laws and statutory regulations in force at the time affecting the grant of preference, and that the goods have been shipped in the United Kingdom to Australia and have not been transhipped, or, if transhipped, it is proved to the satisfaction of the Collector of Customs that the intended destination of the goods, when originally shipped from the United Kingdom, was Australia. For the purpose of the preferential tariff, the following goods are deemed by section 151A of the Customs Act 1901–1959 to be the produce or manufacture of the United Kingdom, provided the final process of their production or manufacture was performed in that country:—

- (a) Goods which are wholly produced or wholly manufactured in the United Kingdom from materials in one or more of the following classes:—
 - (i) Materials wholly produced or wholly manufactured in the United Kingdom or in Australia;
 - (ii) Imported unmanufactured raw materials;
 - (iii) Imported manufactured raw materials as determined by the Minister.
- (b) Goods of the factory or works cost of which not less than 75 per cent. is represented—
 - (i) by labour or material of the United Kingdom; or
 - (ii) by labour or material of the United Kingdom and labour or material of Australia.

- (c) Goods of a class or kind not commercially produced or manufactured in Australia and of the factory or works cost of which not less than 25 per cent. (or 50 per cent. if the Minister so determines) is represented—
- (i) by labour or material of the United Kingdom; or
 - (ii) by labour or material of the United Kingdom and labour or material of Australia.

With the exception of a relatively small number of commodities which carry special rates of duty, the British Preferential Tariff has also been extended; as a result of separate trade agreements, to Canada and New Zealand and by tariff legislation to the Territory of Papua and New Guinea, and the abovementioned preference conditions apply *mutatis mutandis* to each of those countries, except that in respect of New Zealand the percentage content of goods, under clause (b). of the said conditions is 50 per cent. of New Zealand and Australian labour and materials or 75 per cent. of New Zealand and United Kingdom or of New Zealand, Australian and United Kingdom labour and materials. In relation to specified goods, the British Preferential Tariff also applies to Ceylon, Ghana, the Federation of Malaya, Singapore, the Federation of the West Indies, and most of the British non-self-governing colonies, protectorates and trust territories.

(iii) *Intermediate Tariff.* The Intermediate Tariff has been a feature of the Australian Tariff for a considerable number of years, although its effective application dates only from 1st January, 1937, consequent upon the conclusion of trade agreements with Belgium, Czechoslovakia and France in 1936. The countries to which the Intermediate Tariff applies include those countries with which Australia has concluded trade agreements (including tariff negotiations pursuant to the General Agreement on Tariffs and Trade) and countries which accord Australia reciprocal most-favoured-nation tariff treatment by reason of agreements between those countries and the United Kingdom. The Intermediate Tariff has also been extended to some countries to which Australia has no formal obligation to accord most-favoured-nation treatment. The countries and the particular tariff items to which the Intermediate Tariff applies are specified by order made in pursuance of section 9A, of the Customs Tariff 1933–1959.

(iv) *General Tariff.* The General Tariff applies to goods other than those to which the British Preferential Tariff or Intermediate Tariff or special rates under trade agreements apply.

3. *Primage Duties.*—In addition to the duties imposed by the Customs Tariff, *ad valorem* primage duties at rates of 4 per cent., 5 per cent. or 10 per cent. are charged on some goods according to the type of goods and origin thereof under the Customs Tariff (Primage Duties) 1934–1958. Other goods are exempt from primage duty. Goods the produce or manufacture of New Zealand, Norfolk Island, Fiji, Cocos Islands, Christmas Island and the Territory of Papua and New Guinea are exempt from primage duty.

4. *Tariff Board.*—The Tariff Board Act 1921–1958 provides for the appointment of a Tariff Board consisting of seven members, two, but not more than three, of whom shall be officers of the Commonwealth Public Service. Members of the Board are appointed for terms of not less than one year and not more than five years. The purpose of the Tariff Board is to advise the Government on matters relating to the protection and encouragement of Australian industry and to the Customs and Excise Tariffs.

The Chairman of the Board has the duty to ensure the efficient and orderly conduct of the business of the Board. Provision is made for the appointment of a Deputy Chairman to whom the Chairman may delegate his powers, duties and functions under the Act.

The more important matters which the Minister of State for Trade shall refer to the Board for inquiry and report include:—the necessity for new, increased, or reduced duties; the necessity for granting bounties and the effect of existing bounties; any proposal for the application of the British Preferential Tariff or the Intermediate Tariff to any part of the British Commonwealth or any foreign country; and any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff by charging unnecessarily high prices for his goods or acting in restraint of trade. In addition the Minister may refer the following matters to the Tariff Board for inquiry and report:—the general effect of the working of the Customs Tariff and the Excise Tariff; the fiscal and industrial effects of the Customs laws on the Commonwealth; the incidence between the rates of duty on raw materials and on finished or partly finished products; and other matters affecting the encouragement of primary and secondary industries in relation to the Tariff. The Minister of State for Customs and Excise may refer to the Tariff Board for inquiry and report, the following matters:—the classification of goods in the Customs Tariff or Excise Tariff and any matter in connexion with the interpretation of these Tariffs; the question of the value for duty of goods; whether goods not prescribed in departmental by-laws should be so prescribed; and any matter in respect of which action may be taken under the Customs Tariff (Industries Preservation) Act 1921–1957.

Inquiries conducted by the Board relating to any revision of the Tariff, any proposal for a bounty, or any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff shall be held in public, and evidence in such inquiries shall be taken in public on oath, unless any witness objects to giving any evidence in public which the Board is satisfied is of a confidential nature, when the Board may take such evidence in private. Evidence taken by the Board in connexion with any inquiry under the Customs Tariff (Industries Preservation) Act 1921-1957 shall be taken in public on oath.

5. Industries Preservation.—The Customs Tariff (Industries Preservation) Act 1921-1957 provides that, after inquiry and report by the Tariff Board, special duties shall be collected in the following cases when the importation of the goods referred to might be detrimental to an Australian industry. In the case of goods sold for export to Australia at a price less than the fair market value for home consumption or at a price which is less than a reasonable price, a special dumping duty shall be collected equal to the difference between the price at which the goods were sold and the fair market value, or the difference between the price at which the goods were sold and a reasonable price. Similar provision is made for goods consigned to Australia for sale. With regard to goods exported to Australia at rates of freight less than the normal rate of freight the dumping freight duty shall be an amount equal to the difference between the freight paid and the freight which would have been payable at the normal rate. In respect of goods exported to Australia upon which a subsidy, bounty or other financial assistance is paid or given directly or indirectly upon the production, manufacture, carriage or export of those goods, a countervailing duty shall be collected equal to the amount of the subsidy, bounty or other financial assistance; and in the case of any other goods—an amount equal to the difference between the freight paid and the freight which would have been payable at the normal rate.

Special duties may also be collected if dumped or subsidized goods are imported to the detriment of the trade in the Australian market of a third country.

The Act also provides for the collection of an emergency duty on goods which enter Australia under conditions which cause or threaten serious injury to Australian industries or to industries in a third country whose exports enter Australia under preferential tariff. The amount of emergency duty payable is the equivalent of the difference between the landed duty-paid cost of the goods and a reasonably competitive landed duty-paid cost.

The Act provides that the Minister for Customs and Excise may publish a notice in the *Gazette* specifying the goods upon which the special emergency duties under this Act shall thereupon be charged and collected.

6. Trade Descriptions.—The Commerce (Trade Descriptions) Act 1905-1950 gives power to require the application of a proper trade description on certain prescribed goods imported into or exported from the Commonwealth. Goods which must bear a prescribed trade description upon importation into Australia are specified in the Commerce (Imports) Regulations. As regards exports from Australia, marking requirements are prescribed in regulations issued under the Act and relating to specified export commodities.

7. Import Controls.—*Customs (Import Licensing) Regulations.* A comprehensive system of import licensing was introduced in Australia at the beginning of the second World War under the authority of the Customs (Import Licensing) Regulations, being Statutory Rules 1939 No. 163, issued under the Customs Act 1901-1936.

Between 1939 and 1945, licensing controls on imports from both sterling and non-sterling sources were progressively intensified. With the end of the War it was possible to progressively relax the restrictions and by March, 1952, goods from the non-dollar area (excluding Japan for which special provisions applied until July, 1957) were virtually free from import licensing controls.

During the financial year 1951-52, following a fall in the price of wool and a large increase in the volume of imports, Australia incurred a substantial deficit in overall payments on current account. Oversea reserves fell rapidly in the latter part of 1951 and early 1952 endangering Australia's external financial position to such a degree that it became necessary on 8th March, 1952, to apply the Customs (Import Licensing) Regulations to imports from all sources with the exception of goods originating in Papua, New Guinea and Norfolk Island.

The extension of the restrictions on 8th March, 1952, was made under the authority of the above regulations, which had continued in force after the war. Those regulations were subsequently replaced by new Customs (Import Licensing) Regulations made under the Customs Act 1901-1954 on 16th December, 1956. The new Regulations continued to provide, *inter alia*, that the importation of any goods (not being goods which are excepted from the application of the Regulations) is prohibited unless—

- (a) a licence under these Regulations to import the goods is in force; and
- (b) the conditions and restrictions (if any) to which the licence is subject are complied with.

The object of import licensing has been to limit the rate of imports to a ceiling figure, determined by the Government, in order that payments for imports do not involve an excessive drawing on Australia's overseas exchange reserves. To achieve the financial objectives of the controls, imports were divided into a number of categories to which special licensing treatment was accorded (largely by the establishment of quotas for individual importers within each category). In general, the nature of goods and their relative essentiality to the Australian economy were taken into account in determining the licensing rate for particular goods.

Since March 1952, import restrictions have been relaxed and intensified broadly in line with changes in Australia's balance of payments position.

The import controls have been administered without discrimination as to country of origin, with the exception of those relating to imports from Japan and the Dollar Area. The special restrictions against Japanese imports were removed in July, 1957, and in recent years Australia progressively removed discrimination against imports from the Dollar Area. By January 1960, approximately 95 per cent. of total imports were not subject to dollar discrimination.

In accordance with the principle of relaxing and removing controls in the light of developments in Australia's balance of payments position, large-scale licensing changes involving an almost complete abolition of controls were made as from 23rd February, 1960. As a result of these changes some 90 per cent. of total imports are exempt from control. On 1st April, 1960 timber was also added to the exempt list.

Licensing was retained on the bulk of the items which remain under control, for the purpose of providing licensing statistics which have been very useful in the administration of the Japanese Trade Agreement. They will remain under control until, after consultation with industry and commerce, suitable alternative arrangements can be made.

A few other items for which special problems exist, will be removed from control when the problems associated with them have been resolved.

In respect of most of the items which continue to be licensed, provision was also made under the recent relaxations for licensing at a higher rate.

The Government has announced its intention of removing this remaining element of licensing control as soon as possible.

The retention of control over a small field of trade does not imply any departure from the Government's policy of using the Customs Tariff and the Tariff Board machinery as the normal method of protecting economic and efficient Australian industries from import competition.

With the exception of motor vehicles of North American origin, which will be exempted from control as from 1st October, 1960, there is now no discrimination as to country of origin in the administration of import controls.

The administration of the import controls is the responsibility of the Department of Trade, although the actual issue of import licences is a function of the Department of Customs and Excise at the various ports of the Commonwealth.

8. Export Control.—(i) *Commodity Control.* Section 112 of the Customs Act provides that the Governor-General may, by regulation, prohibit the exportation of goods from Australia and that this power may be exercised by—(a) prohibiting the exportation of goods absolutely; (b) prohibiting the exportation of goods to a specified place; and (c) prohibiting the exportation of goods unless prescribed conditions or restrictions are complied with. Goods subject to this export control are listed in the Customs (Prohibited Exports) Regulations.

(ii) *Monetary Control—Banking Act 1959.* As an integral part of the framework of exchange control, a control over goods exported from Australia is maintained under the provisions of Part III. of the Banking (Foreign Exchange) Regulations, to ensure that the full proceeds of such goods are received into the Australian banking system and that these proceeds are received in the currency and in the manner prescribed by the Reserve Bank of Australia. This action is complementary to that taken under other parts of the Banking (Foreign Exchange) Regulations and under Part IV. of the *Banking Act 1959* to control the movement out of Australia of capital in the form of securities, currency and gold.

Export licences are issued subject to terms and conditions specified in the Banking (Foreign Exchange) Regulations and may be subject to such further terms and conditions as are determined or may be free from terms and conditions. On the receipt in Australia by the Reserve Bank, or by a bank acting as agent for that Bank, of advice that the foreign currency has been paid to the Reserve Bank or to an agent of the Bank in payment for goods exported in accordance with a licence granted under the regulations, the Bank, or an agent

of the Bank, pays the licensee, or such other person as is entitled to receive it, an amount in Australian currency equivalent to the foreign currency received. In addition to commercial transactions involving exports, movements of personal effects are also controlled. Persons leaving Australia for overseas are required to obtain licences to cover their bona fide baggage, personal effects and household effects in any individual case where the gold content thereof exceeds £A50, or where jewellery and other articles of high intrinsic worth either exceed £A1,000 in value or have not been the personal property of the passenger for at least twelve months.

9. Trade Agreements.—(i) *The United Kingdom.* The original United Kingdom and Australia Trade Agreement (Ottawa Agreement) was signed on 20th August, 1932. Under this agreement, Australia secured preferences in the United Kingdom market for a wide range of Australian export commodities and in return incurred obligations in respect of tariff levels and the grant of preference to United Kingdom goods.

A new Trade Agreement, designed to replace the original agreement and correct the unbalance in benefits which had emerged in the 25 years of its operation, was signed in Canberra on 26th February, 1957. Briefly, the new agreement preserved security for Australian exports in the United Kingdom market, but lowered the obligatory margins of preference which Australia extends to the United Kingdom.

(ii) *Canada.* The existing trade agreement between Canada and Australia came into force on 3rd August, 1931. The basis of the agreement is, generally, the mutual accord of British Preferential Tariff treatment. The exceptions to this general rule are specified in the schedules to the agreement.

The Customs Tariff (Canadian Preference) 1931 and the Customs Tariff (Canadian Preference) 1934–1959 give effect to the agreement so far as Australia is concerned.

(iii) *New Zealand.* The existing trade agreement between Australia and New Zealand came into force on 1st December, 1933. The basis of the agreement is, generally, the mutual accord of British Preferential Tariff treatment. The exceptions to this general rule are listed in the schedules to the agreement.

The Customs Tariff (New Zealand Preference) 1933–1959 gives legislative effect to the provisions of the agreement.

(iv) *Federation of Rhodesia and Nyasaland.* During June, 1955, a trade agreement was negotiated with the Federation. Australia's principal undertaking was to grant an exclusive tariff preference to the Federation on unmanufactured tobacco, a concession formerly accorded only to Southern Rhodesia, under a trade agreement now terminated. The Federation accorded preferential tariff treatment on a wide range of Australian export products, including wheat and powdered and condensed milk.

(v) *Federation of Malaya.* A trade agreement with the Federation was signed on 26th August, 1958, and came into force immediately. The agreement gives an assurance that Australia's traditional flour trade will be protected from subsidised or dumped competition. An undertaking is given that any tariff preferences Malaya accords will be extended also to Australia. Australia guaranteed free entry for natural rubber so long as the Papua-New Guinea crop is absorbed and assured the Federation that natural rubber would not be at a disadvantage compared with synthetic rubber in respect of tariff or import licensing treatment.

(vi) *Japan.* An Agreement on Commerce between the Commonwealth of Australia and Japan was signed on 6th July, 1957, in Japan. Formal ratification took place in Canberra on 4th December, 1957, following approval of the agreement by the Commonwealth Parliament and the Japanese Diet. The agreement will remain in force until 5th July, 1960, and thereafter unless prior notice of termination is given by either Government.

The agreement provides that each country shall extend most-favoured-nation treatment to the other in respect of customs duties and similar charges and import and export licensing. Japan will not be entitled to claim the benefit of preferences accorded by Australia to Commonwealth countries and dependent territories.

All Japanese goods are now entitled to the most-favoured-nation rate of duty on importation into Australia, whereas previously the general rate applied. The reductions involved have not been significant. Japan has also been placed on an equal basis with other non-dollar countries under the import licensing system. Prior to the agreement certain goods, when of Japanese origin, could be imported only within specified limits.

Australia received certain specific undertakings. Japan agreed:—

- (a) To accord Australian wool the opportunity of competing in the global quota for wool for not less than 90 per cent. of the total foreign exchange allocation for wool each year and not to restrict the total foreign exchange allocation for wool beyond the extent necessary to safeguard Japan's external financial position and balance of payments;
- (b) to take no action to vary the present level of duty on wool imports from Australia for a period of three years from date of signature;
- (c) to admit Australian wheat and barley on a competitive and non-discriminatory basis;
- (d) to accord Australian sugar the opportunity of competing for not less than 40 per cent. of the total foreign exchange allocation for sugar;
- (e) to include Australia as a permitted source of supply for beef tallow and cattle hides on the Automatic Approval (licensing) list;
- (f) to admit Australian dried skim milk on a competitive and non-discriminatory basis;
- (g) to make reasonable provision for the import of Australian dried vine fruits (raisins, currants and sultanas) in each year of the three-year period.

It was agreed that before the end of the initial three-year period of the agreement the two Governments would explore the possibility of applying the General Agreement on Tariffs and Trade between the two countries.

Provision exists for either country to suspend obligations under the agreement to the extent and for such time as may be necessary to prevent serious injury to domestic producers as a result of imports of like or directly competitive products from the other country. The Australian Government has appointed an Advisory Authority whose function is to advise the Minister for Trade whether Australian industry is threatened with serious damage as a result of the agreement.

(vii) *Other Countries.* Australia has entered into bilateral trade agreements with the Union of South Africa, Brazil, Czechoslovakia, France, Greece and Switzerland. Summaries of the texts of these agreements were given in earlier issues of the Official Year Book. In 1951, Australia entered into a trade agreement with Israel under which each country undertook to accord most-favoured-nation tariff treatment to imports from the other. A similar agreement with Iceland was concluded in 1952.

(viii) *The General Agreement on Tariffs and Trade (G.A.T.T.).* The General Agreement on Tariffs and Trade is an international trade agreement which has been in operation since 1st January, 1948. Australia is one of the original contracting parties to the General Agreement on Tariffs and Trade.

The objectives of the G.A.T.T. include the expansion of world trade and the raising of living standards throughout the world. Its members work towards these objectives by the reduction of tariffs and other barriers to trade and of discrimination between countries through negotiations on a reciprocal and mutually advantageous basis. The essential features of the G.A.T.T. are the schedules of tariff concessions which its members have agreed to apply in tariff negotiations with each other, the application of most-favoured-nation treatment among its members, the avoidance of trade discrimination, a code of agreed commercial policy rules for fair international trading.

G.A.T.T. is at present being applied pursuant to the Protocol of Provisional Application under which its members apply the commercial policy rules (contained in Part II. of the Agreement) to the fullest extent consistent with legislation existing at the time of becoming members.

Four series of tariff negotiations have been conducted under the provisions of the General Agreement. As a result of these negotiations Australia has obtained tariff concessions on almost all the principal products of which she is an actual or potential exporter to the individual countries concerned. These concessions were a result both of direct negotiation by Australia and of negotiations by other countries—in the latter case benefits occur through the operation under the Agreement of the most-favoured-nation principle.

In 1954–55 some of the provisions of the G.A.T.T. were revised. The revised G.A.T.T. contains tighter provisions on non-tariff barriers to trade. These barriers are in many respects more significant for some of the export items of interest to Australia. The revised G.A.T.T. also gives more freedom for countries like Australia to revise individual tariff items which had been "bound" against increase in tariff negotiations conducted under the G.A.T.T.

There are at present (October, 1959) 37 Contracting Parties to the Agreement comprising most of the world's larger trading nations. The Contracting Parties periodically hold plenary sessions to deal with questions arising out of the administration of the Agreement. The 14th Session was held at Geneva in May, 1959, and the 15th Session in Japan in October–November, 1959.

§ 3. Imperial Preference in the United Kingdom.

1. Preferential Tariff of the United Kingdom.—A brief summary of the preferential tariff of the United Kingdom in the years prior to 1931 was published in Official Year Book No. 43, page 328.

By 1931, the United Kingdom imposed duties on a fairly wide range of goods, provision being made in all cases for preferential treatment to Empire goods. The important preferences for Australia were those on sugar, dried fruit, wine, and jams and jellies. Even at this time, however, the United Kingdom adhered to the principles of free trade and by far the greater part of imports was free of duty.

In order to counteract the flood of dumping which followed the collapse of world trade in 1929–30, the United Kingdom introduced emergency tariff legislation in 1931. *Ad valorem* duties were imposed on almost all goods imported into the United Kingdom with the exception of certain raw materials, goods from Empire countries being exempt from these duties. These temporary measures were embodied in the Import Duties Act of March, 1932, by the enactment of which the United Kingdom finally abandoned free trade as a policy. This Act provided for the free entry for Empire goods pending the conclusion of some permanent agreement. The Ottawa Agreements Act of November, 1932, emerged from the Imperial Economic Conference held in Ottawa and embodied agreements concluded between the United Kingdom and the Dominions, Newfoundland and Southern Rhodesia. For the purpose of considering the present preferences enjoyed by Australia in the United Kingdom, it is expedient to regard the Import Duties Act and the Ottawa Agreements Act as complementary.

The Import Duties Act provided for the imposition of a general *ad valorem* duty of 10 per cent. on all imports with certain exceptions (i.e., those on the Free List and those already dutiable under previous enactments). Additional duties could be imposed and items on the Free List subjected to duty, and in fact the range of items subject to duties under this Act has been extended from time to time since its enactment.

The freedom of Empire goods from these duties was guaranteed under the Ottawa Agreements Act, which also provided for the imposition of new duties on imports from foreign, but not Empire, countries of a number of products of special interest to the Empire countries concerned. Whilst free entry was guaranteed to Empire producers on a wide range of products, the margins of preference thereby applicable were not bound, and the duties could be varied up or down by the United Kingdom Government without the consent of Empire countries. On a selected range of items, however, which are specified in the schedules to the Ottawa Agreements Act, the duties could not be varied by the United Kingdom without the consent of the other party to the respective agreement.

Since 30th October, 1947 Canada and the United Kingdom have, by an exchange of letters, recognized the rights of their respective Governments to reduce or eliminate the preferences they accord one another without prior consultation or consent.

In 1947 the United Kingdom and Australia adhered to the General Agreement on Tariffs and Trade, which prohibits increases in tariff preferences by either country. This rule, as is the case with the other provisions of the General Agreement, may be waived by a two-thirds majority of the signatories to the agreement.

2. The Australia-United Kingdom Trade Agreement.—The provisions and history of the original Australia-United Kingdom Agreement (Ottawa Agreement) were published in Official Year Book No. 43, page 329.

The major provisions of the current agreement (signed in Canberra on 26th February, 1957) which affect Australia's position in the United Kingdom market are as follows:—

- (a) Continued free entry for those Australian goods in which Australia has an active trade interest, and which were accorded free entry immediately prior to the new agreement.

- (b) A guaranteed minimum margin of preference in the United Kingdom Tariff on all items so treated in the previous agreement plus an extension of this guarantee to several items on which the margin of preference, although in force, was not bound to Australia. This latter group comprised currants, egg powder and egg pulp, jam, rice, tomato juice, pineapple juice and coconut oil. A selection of the items on which Australia receives a bound margin of preference and the extent of that preference is as follows. (all values in sterling):—Butter (15s. a cwt.); cheese (15 per cent. *ad val.*); canned peaches, pears and apricots (12 per cent. *ad val.*); raisins (8s. 6d. a cwt.); eggs in shells (1s. to 1s. 9d. a great hundred (10 dozen)); milk powder (6s. a cwt.); sweetened condensed milk (5s. a cwt.); apples (4s. 6d. a cwt. in season); honey (5s. a cwt.); flour (10 per cent. *ad val.*); light wine (2s. a gallon); heavy wine (10s. a gallon at present duty rate).
- (c) All rights under the Ottawa Agreement in respect of meat are maintained.
- (d) Australia receives an assured wheat market of at least 750,000 tons f.a.q. wheat or flour equivalent annually. Any Australian high-protein wheat sold to the United Kingdom is not counted against this obligation.
- (e) There is provision for full consultation between the two Governments on such matters as agricultural production and marketing, transport and communication, the disposal of surpluses and restrictive business practices.
- (f) The two Governments declared their intention to introduce legislation which will enable them to impose anti-dumping or countervailing duties where material injury is caused or threatened to the other party.
- (g) The agreement shall be the subject of re-negotiation between the two Governments in 1961.

3. Recent Developments affecting the Operation of the Trade Agreement.—The effect of increases in commodity prices in the post-war period has been to reduce the effective value of those preference margins which are expressed in terms of British currency ("specific margins"). The commodities affected are butter, eggs, canned apples, loganberries, pineapples, tropical fruit salad, raisins, dried apricots, sugar, lactose, and wines. The following table shows, for selected items, how the *ad valorem* incidence of specific preference margins originally negotiated in 1932 and rebound in the 1957 agreement has been reduced by increases in the average value of the commodities on which they are granted.

IMPERIAL PREFERENCE: CHANGES IN VALUE OF PREFERENCES.

Ad Valorem Incidence of Specific Preferences Received by Australia in the United Kingdom.

Commodity.	Preference Margin.	Ad Valorem Incidence. (a) (Per cent.)				
		1938.	1947.	1954.	1956.	1958.
Sugar, raw ..	£3 14s. 8d. a ton ..	35.8	12.2	9.4	8.7	10.5
Butter ..	15s. a cwt. ..	13.3	7.6	4.3	4.6	6.5
Canned pineapple ..	5s. a cwt. ..	21.4	5.5	2.9	3.5	4.3
Currants ..	2s. a cwt. ..	7.2	2.8	2.4	1.8	1.8
Raisins ..	10s. 6d. a cwt. to 1947; 8s. 6d. a cwt. from 1948	31.2	13.1	9.7	8.0	6.2
Honey ..	7s. a cwt. to 1938; 5s. a cwt. from 1939	19.0	6.8	5.4	3.8	4.8
Milk, dried whole ..	6s. a cwt. ..	8.7	4.7	2.9	3.1	3.2
Milk, dried skim ..	6s. a cwt. ..	20.1	7.4	7.0	7.3	8.6
Apples ..	4s. 6d. a cwt. ..	26.4	9.9	5.9	5.4	4.8
Pears ..	4s. 6d. a cwt. ..	19.5	6.7	5.3	4.9	5.1

(a) The *ad valorem* incidence of a preference is calculated by expressing the specific margin of preference (in £ sterling a cwt., a ton, etc.) on a particular commodity as a percentage of the average unit value (in £ sterling a cwt., a ton, etc.) of United Kingdom imports of that commodity from all sources in the year concerned.

§ 4. Trade Commissioner Service.

The stimulation of interest abroad in Australia's exports is an important Government activity in which the Australian Trade Commissioner Service plays a prominent part. The origin of the Service dates back to 1921, when the first Trade Commissioner was appointed to Shanghai. In the following year, a second Commissioner was appointed to Singapore. These appointments were, however, terminated shortly afterwards.

In 1929, a Trade Commissioner post was opened at Toronto. Wellington was opened five years later. The Trade Commissioners Act 1933 provided for the establishment of an Australian Government Trade Commissioner Service. In 1935 official trade representation was established at Batavia (now Djakarta), Shanghai and Tokyo. Cairo, New York and Calcutta posts were opened between 1937 and 1939 and the Singapore post was established in 1941.

After the war, the service increased steadily to take care of Australia's expanding export interests and the growing diversity of our export commodities, and in February, 1960, there were 30 Trade Commissioner posts in 21 countries. New posts are about to be opened at Accra (Ghana) and Nairobi (Kenya).

In 1957 Australia's official commercial representation overseas was extended by the introduction of a system of Government Trade Correspondents. These men, who as a rule already reside in particular centres overseas, are engaged on a part-time basis to carry out market research, arrange introductions between buyer and seller, and generally promote Australia's trade interests in the same way as Trade Commissioners. Each Trade Correspondent operates under the general direction of the nearest Trade Commissioner and acts as a point of local contact for him.

The first two Australian Trade Correspondents were appointed in 1957 at Montevideo (Uruguay) and Nairobi (Kenya). In 1958 four more were appointed at Nadi (Fiji), Honolulu, Mauritius and Mexico City. Further limited expansion of this form of official commercial representation is contemplated. The Australian Trade Correspondent at Nairobi will shortly be replaced by an Australian Government Trade Commissioner.

Trade Commissioners and, to a lesser extent, Trade Correspondents, are responsible for commercial intelligence in their territories. Particular facilities provided for Australian exporters and export organizations include the following:—

- (a) Surveys of market prospects;
- (b) Advice on selling and advertising methods;
- (c) Arranging introductions with buyers and agents;
- (d) Providing reports on the standing of overseas firms;
- (e) Advice and assistance to business visitors;
- (f) Helping to organize and carry through trade missions, trade displays, newspaper supplements and other promotion and publicity media;
- (g) Providing information on import duties, import licensing, economic conditions, quarantine and sanitary requirements and other factors affecting the entry and sale of goods.
- (h) Helping to attract desirable investment.

In some countries, Trade Commissioners also participate in inter-governmental negotiations in the economic and commercial fields. In certain countries where there is no diplomatic or consular mission (the Federation of West Indies, Hong Kong, the Federation of Rhodesia and Nyasaland and Sweden) he is called upon to act as the Australian representative.

Trade Commissioners usually enter the Service from either the commercial world or the Public Service, and applications for entry into the Service are called for periodically by public advertisement. In the more important posts it is the practice for the Trade Commissioner to share his duties with an Assistant Trade Commissioner, who is selected to be trained in the Service and qualify at a later stage for appointment as a Trade Commissioner. These staffing arrangements are designed to enable the Government to draw upon experienced and able executives in both private enterprise and the Public Service, and at the same time to build up a body of competent personnel to carry out a policy of vigorous expansion in the field of overseas trade.

The Trade Commissioner Service is administered by the Commonwealth Department of Trade (as distinct from the diplomatic and consular services, administered by the Department of External Affairs), but in countries where there is an Australian diplomatic or consular mission it is the practice for Trade Commissioners to be attached to the mission and to hold an appropriate diplomatic or consular rank (Commercial Counsellor, Commercial Secretary or Commercial Attaché).

The overseas trade representation is shown in Chapter XXX.—Miscellaneous.

§ 5. Export Payment Insurance Corporation.

The Export Payment Insurance Corporation Act No. 32 of 1956, established the Corporation with the objective of protecting Australian exporters against risks of loss arising from non-payment of their overseas accounts.

The Corporation is charged to be self-supporting, that is, over a period it is to operate at neither a profit nor a loss. It operates on principles similar to those of any other form of insurance in as much as in return for payment of a premium the exporter can claim on the Corporation in the event of non-payment by his buyer for any of the reasons set out in his policy. There is no overlap with normal insurance facilities since the Corporation does not cover risks which can normally be insured with commercial insurers.

The main risks of loss against which the Corporation insures are the "commercial" risks of the insolvency or protracted default of the buyer and "political" risks. The latter include exchange transfer delays; the imposition of Government regulations which prevent the import of goods into the buyer's country; war or revolution in the buyer's country; and generally any other cause not being within the control of the exporter or the buyer, and which arises from events occurring outside Australia. Prior to December, 1959, the Corporation could extend cover only to 85 per cent. for all types of risks insured. From that time, however, cover on the "political" risks was increased to a maximum of 90 per cent. for the amount of loss in the pre-shipment period and a maximum of 95 per cent. in the post-shipment period. The cover for "commercial" risks remains at 85 per cent.

The initial capital of the Corporation was £500,000 and the maximum liability limit of the Corporation was £25,000,000. In April, 1959, these limits were doubled to £1,000,000 and £50,000,000 respectively to enable the Corporation to meet fully the demands of the Australian exporters for this facility.

The Corporation itself does not provide finance for exporters, but the stated policy of the trading banks is that E.P.I.C. guarantees considerably reduce the risks involved in the export trade, and this can assist the exporter in obtaining such finance as he requires.

Since the first policy was issued in September, 1957, Australian exporters have made increasing use of the facilities of the Corporation. On 31st December, 1959, the Corporation had policies current to the value of over £26,000,000—an increase of over £10,000,000 on the figure for 31st December, 1958. The Corporation has issued policies covering exports to over 100 countries, and has insured a wide range of Australian exports.

Consultative Council. A Consultative Council of leading figures in the fields of insurance, commerce and industry has been appointed to advise the Corporation on its activities.

§ 6. Method of Recording Imports and Exports.

1. *Source of Statistics.*—Overseas trade statistics are compiled from documents obtained under the Customs Act 1901–1959 and supplied to this Bureau by the Department of Customs and Excise.

2. *Customs Area.*—The Customs Area, to which all overseas trade statistics issued by this Bureau apply, is the whole area of the Commonwealth of Australia. Non-contiguous territories are treated as outside countries, and trade transactions between Australia and these non-contiguous territories are part of the overseas trade of Australia. Such transactions are shown separately, i.e., the trade of Australia with each particular country is separately recorded and tabulated.

3. **The Trade System.**—There are two generally accepted systems of recording overseas trade statistics, namely, (a) special trade and (b) general trade, and statistics of both are published by the Bureau, although greater emphasis is placed on general trade. The Statistical Office of the United Nations defines the two systems as follows:—

- (a) *Special Trade.* Special imports are the combined total of imports directly for domestic consumption and withdrawals from bonded warehouses or free zones for domestic consumption, transformation or repair. Special exports comprise exports of national merchandise, namely, goods wholly or partly produced or manufactured in the country, together with exports of nationalized goods. (Nationalized goods are goods which, having been included in special imports, are then exported.)
- (b) *General Trade.* General imports are the combined total of imports directly for domestic consumption and imports into bonded warehouse or free zone. Direct transit trade and trans-shipment under bond are excluded. General exports are the combined total of national exports and re-exports of imported merchandise including withdrawals from bonded warehouse or free zone for re-export.

The tables which follow refer to general trade, except for those appearing in § 17, para. 2, which refer to imports cleared for home consumption.

4. **Statistical Classification of Imports and Exports.**—Statistics of overseas imports and exports from which the summary tables in this issue of the Official Year Book have been extracted were compiled according to the revised classification which came into operation on 1st July, 1945. This classification is designed to allow for the inclusion of items which become significant with varying trade conditions, and in 1958–59 provided for over 2,000 import items and over 1,000 export items.

5. **The Trade Year.**—From 1st July, 1914, the statistics relating to overseas trade have been shown according to the financial year (July to June). Prior to that date, the figures related to the calendar year. A table is included in § 18 showing the total value of imports and exports in the calendar years 1955 to 1959 inclusive.

6. **Valuation.**—(i) *Imports.* The recorded value of goods imported from countries beyond Australia as shown in the following tables represents the amount on which duty is payable or would be payable if the duty were charged *ad valorem*. Since 15th November, 1947, the value for duty of goods imported into Australia has been the f.o.b. value in Australian currency instead of the British currency f.o.b. value plus 10 per cent.

Section 154 (1) of the Customs Act 1901–1959 provides that “when any duty is imposed according to value, the value for duty shall be the sum of the following:—

- (a) (i) the actual money price paid or to be paid for the goods by the Australian importer plus any special deduction, or
- (ii) the current domestic value of the goods, whichever is the higher; and
- (b) all charges payable or ordinarily payable for placing the goods free on board at the port of export”.

“Current domestic value” is defined as “the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country”. All import values shown throughout this and other chapters of this issue of the Official Year Book are therefore uniform f.o.b. values at port of shipment in Australian currency.

(ii) *Exports.* Since 1st July, 1937, the following revised definitions of f.o.b. values have been adopted for exports generally:—

- (a) Goods sold to overseas buyers before export—the f.o.b. port of shipment equivalent of the price at which the goods were sold (e.g., as regards wool, the actual price paid by the overseas buyer plus the cost of all services incurred by him in placing the wool on board ship).

- (b) Goods shipped on consignment—the Australian f.o.b. port of shipment equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which the goods were dispatched for sale (as regards wool, the f.o.b. port of shipment equivalent of the current price ruling in Australia will normally provide a sufficient approximation to the f.o.b. port of shipment equivalent of the price ultimately received).

Exporters are required to show all values in terms of Australian currency, and to include the cost of containers.

An account of the bases of valuation in operation prior to 1st July, 1937, was given on page 469 of Official Year Book No. 39.

7. Inclusions and Exclusions.—(i) *Ships' and Aircraft Stores.* Prior to 1906, goods shipped in Australian ports on oversea vessels as ships' stores were included as exports. From 1906, ships' and subsequently aircraft stores have been specially recorded as such, and omitted from the tabulation of exports. A table showing the value of these stores shipped each year since 1954–55 is shown on page 497.

(ii) *Outside Packages.* Outside packages (containers, crates, etc.) have always been included as a separate item in the tabulation of imports but, except for those received from the United Kingdom, a classification according to country of origin has been available only since 1950–51. For exports, however, the value recorded for each item includes the value of the outside package.

(iii) *Trade on Government Account.* Imports and exports on Government account are treated as normal transactions and are an integral part of oversea trade transactions.

(iv) *Currency.* Notes and coins of base metal are included in the oversea trade statistics at their commodity value only.

(v) *Gold Content of Ores and Concentrates.* The value of ores and concentrates imported and exported includes the value of the gold content. The latter is not recorded separately for purposes of inclusion in imports and exports of gold.

(vi) *Personal Effects.* Migrants' effects are included in imports and exports.

8. Countries to which Trade is Credited.—(i) *Imports.* From 1st January, 1905, in addition to the record of the countries whence goods arrived directly in Australia, a record of the countries of their origin was kept, as it was considered that classification of imports according to country of origin was of greater interest and value than classification according to country of shipment. Up to and including the year 1920–21, imports continued to be classified both according to country of shipment and according to country of origin, but the former tabulation was discontinued as from the year 1921–22.

(ii) *Exports.* In the export sections of tables in this chapter, "country" refers to country of consignment.

9. Pre-Federation Records.—In the years preceding Federation, each State independently recorded its trade, and in so doing did not distinguish other Australian States from foreign countries. As the aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, it is unfortunate that past records of values and the direction of imports and exports were not on uniform lines. Imports and exports for years prior to Federation may be found in issues of the Official Year Book prior to No. 41. On the introduction of the Customs Act 1901 the methods of recording values were made uniform throughout the States.

§ 7. Total Oversea Trade.

1. Including Gold.—The following table shows the total trade (including gold) of Australia with oversea countries from 1901 to 1958–59. To save space, the period 1901 to 1950–51 has been divided into five-year periods, and the figures shown represent the annual averages for the periods specified. Figures for the individual years were published in Official Year Book No. 40 and earlier issues, but it should be borne in mind that the figures for imports in issues prior to No. 37 were in British currency.

In this chapter the values in all tables of imports and exports are shown in Australian currency f.o.b. at port of shipment.

OVERSEA TRADE: AUSTRALIA.

(INCLUDING GOLD.)

Period.(a)	Value.(£'000.)			Excess of Exports(+) or Imports(-) (£'000.)	Value per Head of Population.(£)		
	Imports.	Exports.	Total.		Imports.	Exports.	Total.
1901 to 1905 ..	35,689	51,237	86,926	+ 15,548	9.1	13.1	22.2

1916-17 to 1920-21	91,577	115,066	206,643	+ 23,489	17.4	21.9	39.3
1921-22 to 1925-26	124,404	134,545	258,949	+ 10,141	21.1	22.9	44.0
1926-27 to 1930-31	119,337	131,382	250,719	+ 12,045	18.6	20.5	39.1
1931-32 to 1935-36	73,798	120,958	194,756	+ 47,160	11.1	18.1	29.2
1936-37 to 1940-41	123,553	157,610	281,163	+ 34,057	17.8	22.7	40.5
1941-42 to 1945-46	211,514	163,955	375,469	- 47,559	29.1	22.4	51.5
1946-47 to 1950-51	449,273	571,430	1,020,703	+ 122,157	57.2	72.7	129.9
1951-52.. ..	1,053,423	675,008	1,728,431	- 378,415	123.5	79.1	202.6
1952-53.. ..	514,109	871,272	1,385,381	+ 357,163	58.9	99.7	158.6
1953-54.. ..	681,609	828,332	1,509,941	+ 146,723	76.6	93.0	169.6
1954-55.. ..	843,742	774,164	1,617,906	- 69,578	92.8	85.2	178.0
1955-56.. ..	821,088	781,864	1,602,952	- 39,224	88.1	83.9	172.0
1956-57.. ..	718,991	992,906	1,711,897	+ 273,915	75.4	104.1	179.5
1957-58.. ..	791,940	817,946	1,609,886	+ 26,006	81.3	83.9	165.2
1958-59.. ..	796,599	811,463	1,608,062	+ 14,864	80.0	81.5	161.5

(a) The figures shown for the years 1901 to 1950-51 represent the annual averages for the periods covered. See text above. From 1914-15 onwards the particulars relate to financial years. (b) Prior to 1906, ships' stores were included in exports. For the value of such goods shipped on overseas vessels and aircraft during each of the years 1954-55 to 1958-59 see Table on p. 497.

In issues of the Official Year Book prior to No. 23, fluctuations in the value of the overseas trade of Australia for earlier years were treated in some detail. The enhanced prices ruling for commodities and the peculiar conditions affecting Australian trade were responsible for the high value of imports in the years following the 1914-18 War, and these factors should be taken into consideration in making comparisons with earlier years. In the three years ended 1928-29, imports fell while exports were well maintained, but in 1929-30 both imports and exports declined substantially. The full effects of the economic depression are reflected in the greatly diminished trade figures for the period 1931-32 to 1935-36 and some years thereafter. The lowest level was recorded in 1931-32, when the total trade amounted to £137,538,000.

The outbreak of war in the Pacific in 1941 resulted in a substantial increase in the value of imports during the years 1941-42 to 1945-46. Since the end of the war the annual values of imports and exports have increased considerably, largely because of higher prices.

A graph showing the overseas trade of Australia from 1933-34 to 1958-59 appears on page 487.

2. **Excluding Gold.**—The fluctuations in recent years in merchandise trade (including silver as merchandise) are shown more clearly in the following table, from which *all* gold movements have been excluded.

OVERSEA TRADE: AUSTRALIA.

(EXCLUDING GOLD.)

Year.	Value. (£'000.)			Value per Head of Population.(£)		
	Imports.	Exports.	Total.	Imports.	Exports.	Total.
1954-55.. ..	841,018	760,446	1,601,464	92.5	83.7	176.2
1955-56.. ..	818,343	773,540	1,591,883	87.9	83.0	170.9
1956-57.. ..	716,720	978,679	1,695,399	75.2	102.6	177.8

(ii) *Proportions.* In view of the fluctuations in the total values of imports and exports, it is somewhat difficult to ascertain from the preceding table the relative importance of the various countries in the trade of Australia. A better idea of the proportions of imports supplied by the various countries and of their relative importance as markets for Australian exports during the years 1956-57 to 1958-59 may be obtained from the following table.

COUNTRIES OF ORIGIN OR CONSIGNMENT OF AUSTRALIAN IMPORTS AND EXPORTS: PROPORTIONS.

2. According to Monetary Groups.—The following table shows the trade of Australia according to monetary groups during the years 1957-58 and 1958-59.

The sterling group includes the United Kingdom, its colonies and dependencies, all other countries of the British Commonwealth (except Canada and the New Hebrides Condominium) and certain non-British countries of which the most important are Burma, Bahrain Islands, other Arabian States (excluding Saudi Arabia and Yemen) and Iceland.

The dollar group is comprised of the United States of America and dependencies, Canada, Mexico, other Central American countries, Bolivia, Colombia, Ecuador, Venezuela, the Philippines and Liberia.

The E.E.C. group consists of non-sterling members of the European Economic Community, namely Belgium, France, Italy and the Netherlands together with their associated states and dependencies and the Federated Republic of Germany. Prior to 1958-59 this group was included in the O.E.E.C. group.

The O.E.E.C. group in the following table comprises the following non-sterling members of the Organization for European Economic Co-operation, namely Norway, Portugal and their dependencies, Austria, Denmark, Greece, Spain, Sweden, Switzerland and Turkey.

Of the remaining countries grouped under "other non-sterling", the more important as regards trade with Australia are Czechoslovakia, Finland, Poland, Spain, the Union of Soviet Socialist Republics, Egypt, Iran, Saudi Arabia, Japan, Indonesia, Thailand, Brazil and Chile.

(b) Excludes railway sleepers.

4. **Imports from the United Kingdom and Competing Countries.**—Since 1908, permanent resident Commissioners appointed by the British Board of Trade have been located in Australia for the purpose of advising manufacturers and merchants in the United Kingdom with regard to Australian trade affairs. From 8th August, 1907, the Commonwealth Customs Tariffs have provided preferential rates of customs duties on certain goods the produce or manufacture of the United Kingdom, with the object of assisting the British manufacturer to retain or improve his position in this market in relation to other countries. The main provisions in these Acts relating to preference are dealt with on previous pages in this chapter.

In an investigation into the relative position occupied by the United Kingdom in the import trade of Australia, the comparison must, of course, be restricted to those classes of goods which are produced or manufactured in the United Kingdom. Imports into Australia include many commodities, such as tea, rice, raw coffee, unmanufactured tobacco, petroleum products, copra, timber, etc., which the United Kingdom cannot supply. These items, in addition to others not available from that country, have therefore been omitted from the following table.

The imports into Australia have been classified under nine headings, and the trade of the United Kingdom therein is compared with that of France, Federal Republic of Germany, Japan and the United States of America. These countries have been selected as the principal competitors in normal times with the United Kingdom for the trade of Australia under the specified headings. Totals for each of the years 1956–57 to 1958–59 are shown in the following table.

	{ 1958-59	307,435	11,724	42,954	29,949	108,503	794,388

(a) Includes outside packages.

The principal classes of competitive imports are metals, metal manufactures and machinery (value £292,936,000 in 1958-59) and manufactured fibres, textiles and apparel (value £96,973,000 in 1958-59). The value of goods included in these two groups represented 72.4 per cent. of the total value of competitive commodities during 1958-59. In 1958-59, the United Kingdom supplied 49.3 per cent. of the total value of competitive goods.

§ 10. Trade with Eastern Countries.

1. **Merchandise Trade According to Countries.**—The values of imports from and exports to Eastern countries during the years 1956-57 to 1958-59 are shown in the following table. The principal commodities imported in 1958-59 according to countries of origin were:—Borneo (British)—crude petroleum, £8,519,000, timber, hardwood, £2,094,000; Ceylon—tea, £9,150,000; India—bags and sacks, £6,836,000, cotton and linen piece-goods, £4,147,000,

10174/59.—16

hessian, £2,719,000, tea, £1,117,000 and petroleum, £1,141,000; Malaya—crude rubber £6,896,000, latex, £1,364,000, timber, £1,524,000 and tin, £1,055,000; Japan—metals and metal manufactures, £1,455,000, cotton and linen piece-goods, £13,756,000, other textiles, £3,175,000, tinned fish, £1,449,000; Indonesia—petroleum spirit, £5,231,000, kerosene, £2,439,000, crude petroleum, £15,568,000, residual and solar oil, £532,000 and tea, £4,223,000.

All other articles	162,318	150,436	160,691
Total Exports (Australian Produce)	979,244	803,153	794,831

(a) 2,000 lb.

(b) Quantity in terms of greasy wool.

A graph showing exports in principal commodity groups in each of the years 1953–54 to 1958–59 will be found on page 489.

4. **Imports of Merchandise and Bullion and Specie.**—The table hereunder shows the value of imports into Australia during each of the years 1954–55 to 1958–59, grouped under the headings—Merchandise, and Bullion and Specie. The imports of merchandise are shown under the sub-headings of “free” and “dutiable” goods.

IMPORTS OF MERCHANDISE AND BULLION AND SPECIE: AUSTRALIA.
(£'000.)

Year.	Merchandise.			Bullion and Specie.	Total Imports.
	Free Goods.	Dutiable Goods.	Total.		
1954–55.. ..	399,063	441,909	840,972	2,770	843,742
1955–56.. ..	421,208	397,085	818,293	2,795	821,088
1956–57.. ..	403,496	313,186	716,682	2,309	718,991
1957–58.. ..	426,206	363,055	789,261	2,679	791,940
1958–59.. ..	464,274	330,114	794,388	2,211	796,599

5. **Exports of Merchandise and Bullion and Specie.**—The next table shows the value of exports from Australia during each of the years 1954–55 to 1958–59, grouped under the headings—Merchandise, and Bullion and Specie. The exports of Australian produce and re-exports are shown separately.

EXPORTS OF MERCHANDISE AND BULLION AND SPECIE: AUSTRALIA.
(£'000.)

Year.	Merchandise.			Bullion and Specie.			Total Exports.
	Australian Produce.	Re-exports.	Total.	Australian Produce.	Re-exports.	Total.	
1954–55 ..	749,765	8,276	758,041	16,118	5	16,123	774,164
1955–56 ..	757,100	13,737	770,837	10,990	37	11,027	781,864
1956–57 ..	959,348	13,650	972,998	19,896	12	19,908	992,906
1957–58 ..	795,527	14,776	810,303	7,626	17	7,643	817,946
1958–59 ..	790,087	16,618	806,705	4,744	14	4,758	811,463

6. **Imports and Net Customs Revenue.**—The percentage of net Customs revenue, excluding net primage, collected to the total value of all merchandise imported in each of the years 1954–55 to 1958–59 was as follows:—1954–55, 11.0 per cent.; 1955–56, 9.7 per cent.; 1956–57, 8.9 per cent.; 1957–58, 8.8 per cent., and 1958–59, 8.8 per cent. Primage duty was in force during these years and if this is added to net Customs revenue the percentages become:—1954–55, 12.0 per cent.; 1955–56, 10.7 per cent.; 1956–57, 9.6 per cent.; 1957–58, 9.1 per cent., and 1958–59, 9.0 per cent. The percentages of net Customs revenue, excluding primage, to the total value of dutiable goods only were: 1954–55, 20.9 per cent.; 1955–56, 20.1 per cent.; 1956–57, 20.4 per cent.; 1957–58, 19.1 per cent. and 1958–59, 21.0 per cent. The calculations are based on Australian currency values and on the assumption that the value of clearances approximated to the value of imports during the same period.

§ 13. Ships' and Aircraft Stores.

Prior to 1906, goods shipped in Australian ports on board oversea vessels as ships' stores were included in the general exports. From 1906, ships' and subsequently aircraft stores have been specially recorded as such, and have been omitted from the export figures. The value of these stores during each of the years 1954-55 to 1958-59, with oils separate, is shown in the following table:—

VALUE OF STORES LOADED ON OVERSEA SHIPS AND AIRCRAFT: AUSTRALIA.
(£'000.)

Item.	1954-55.	1955-56.	1956-57.	1957-58.	1958-59.
Oils	7,328	7,970	9,059	8,383	6,704
All Stores (including oils) ..	13,181	13,539	14,208	12,798	10,876

In addition to oils, the principal items supplied to oversea ships and aircraft in 1958-59 were:—Meats, £1,344,163; fruit and vegetables, £373,036; eggs, £166,772; butter, £92,542; ale, porter, beer, etc., £249,086; sea food, £137,793; coal, £37,808; flour, £49,376; rice, £22,521; milk and cream, £37,013.

§ 14. Movement of Bullion and Specie.

1. Imports and Exports.—The following table shows the values of gold and silver bullion and specie and of bronze specie imported into and exported from Australia during each of the years 1956-57 to 1958-59.

IMPORTS AND EXPORTS, BULLION AND SPECIE: AUSTRALIA.
(£.)

Item.	Imports.			Exports.

§ 15. Exports According to Industries.

1. Classification.—The following table provides an analysis of the total recorded value of Australian exports for the years 1956–57 to 1958–59. This analysis is designed to show fluctuations in the value of exports of Australian produce dissected according to the main industry of their origin, although any such classification is necessarily arbitrary in some respects.

EXPORTS OF AUSTRALIAN PRODUCE ACCORDING TO INDUSTRIAL GROUPS.

Industrial Group.	Value. (£'000.)			Proportion of Value of Exports of Australian Produce (excluding Gold). (Per cent.)		
	1956-57.	1957-58.	1958-59.	1956-57.	1957-58.	1958-59.

Total Primary Produce—						
Unprocessed	613,924	478,576	470,594	63.7	60.0	59.4
Processed	255,373	219,703	224,803	26.4	27.6	28.4
Total	869,297	698,279	695,397	90.1	87.6	87.8
Manufactures	73,969	72,583	70,988	7.7	9.2	9.0
Refined Petroleum Oils	10,097	15,385	14,702	1.0	1.9	1.9
Unclassified	11,654	10,554	10,465	1.2	1.3	1.3
Total Australian Produce (excluding Gold)	965,017	796,801	791,552	100.0	100.0	100.0
Re-exports (excluding Gold)	13,662	14,793	16,632
Gold Exports(a)	14,227	6,352	3,279
Total Recorded Value of Exports	992,906	817,946	811,463

(a) The value of refined newly-won gold was £16,599,179 in 1956-57, £17,301,072 in 1957-58 and £16,644,752 in 1958-59.

2. Relative Importance of Industrial Groups.—In the year 1958-59, Australian produce (other than gold) exported amounted to approximately £792 million. Of this, £695 million or 88 per cent. was mainly produce of primary industries, comprising £470 million of unprocessed produce and £225 million of goods which had been processed in some degree before export. The values of the principal individual items of processed primary produce exported were:—Raw sugar, £32,163,000; flour, etc., £14,001,000; canned fruit, £12,950,000; dried fruit, £12,743,000; wool (scoured, tops, etc.), £38,010,000; canned meats, £15,434,000; butter, £24,956,000; milk (condensed, dried, etc.), £10,234,000; pig lead, £12,561,000; lead bullion, £6,218,000; zinc bars, blocks, etc., £3,884,000; copper ingots, £5,348,000; and undressed timber, £3,358,000.

The value of manufactures exported as classified above was £71 million, or approximately 9 per cent. of Australian produce (other than gold) exported in 1958-59. The values of principal individual items here included were:—Manufactures of metal, £40,693,000; implements and machinery, £6,915,000; drugs and chemicals, £5,705,000, and paper and stationery, £2,511,000.

The items enumerated indicate the arbitrariness of the line necessarily drawn between primary produce and manufactures in any classification of this kind. The value of processed primary products exported includes some element of value added by the simpler processes of manufacture, while the value shown for manufactures exported necessarily includes the value of raw materials (primary produce) used in those manufactures.

Refined petroleum oils exported are shown separately, as they consist of imported crude oils refined in Australia and re-exported in the refined form. The values of principal individual items shown as "unclassified" in 1958-59 were:—Individual consignments of less than £50 in value, £3,946,000; and military equipment and stores and supplies for Australian projects overseas, £3,779,000.

§ 16. Australian Index of Export Prices.

1. **General.**—Over the past fifty years the exports of Australia have become increasingly diversified, but, although the proportion of highly manufactured exports has increased, it is still small in relation to total exports. Most of the exports still consist of basic products such as wool, wheat, butter, etc.

2. **Historical.**—An annual index of export prices has been published by this Bureau since its inception.

The first index was compiled annually for the years 1901 to 1916-17. The method of computation was to select all articles of export which were recorded by units of quantity, and to apply to the quantities of these export commodities actually exported during any year the average price per unit ruling in the year 1901 (adopted as the base year). The total value so obtained was divided into the total actual (recorded) value of these exports for the year concerned. The quotient (multiplied by 1,000) thus obtained was the export price index number for that year.

The method was changed in 1918. A weight for all principal exports was calculated on the average quantities of exports for the nineteen and a half years from 1st January, 1897 to 30th June, 1916. To these weights were applied the "average unit export values" of each export in successive years, and a weighted aggregative index of "price" variations was derived. It was published for the years 1897 to 1929-30, and particulars of this index were last published in Official Year Book No. 24, page 147.

After the 1914-18 War, however, the relative importance of different exports changed considerably. In addition, the pattern of exports varied considerably from year to year.

3. **Present Indexes.**—For the reasons just mentioned, two new series of monthly export price indexes—one using fixed weights and the other using changing weights—were published in 1937, computed back to 1928. These are the only export price indexes now published.

The data on which both series are based differ from those utilized in the old series of annual index numbers. The most important change was the use of actual (or calculated) export parities, based on actual price quotations, in place of the "unit values" declared at the Customs.

The old index took no account of gold exports. The omission is natural and reasonable for countries which produce little or no gold. For gold producing countries, although some exports of gold would be irrelevant (e.g., the Australian shipments of gold reserves during the depression), the exports of newly produced gold should be taken into account. In the new series, therefore, gold is included, but the weight given to it is not the quantity exported but the quantity produced.

The two series are compiled monthly, and both relate to commodities which normally constitute about 80 per cent. of the total value of exports of merchandise and silver together with gold production.

4. **The Fixed Weights Index.**—(i) *General.* This is a weighted aggregative index of price variations. It was computed back to 1928, with that year taken as base. It is now usually published on the base: Average of three years ended June, 1939 = 100.

The purpose of this index is to provide comparisons, over a limited number of years, of the level of prices of those commodities normally exported from Australia, making no allowance for variations during the period in the proportions of the different kinds of exports.

(ii) *Weights.* The original weights (used for the period 1928 to 1936) were, in round figures, the average annual exports (production in the case of gold) during the five years 1928-29 to 1932-33.

From July, 1936, the weights were revised, and are now based on the average annual exports (production in the case of gold) during the three years 1933-34 to 1935-36. The break of continuity has been bridged by the usual method of splicing. Consideration is being given to adopting weights for a post-war period.

The weight adopted for wheat takes into account the wheat equivalent of flour exported; the weight allotted to greasy wool takes account of the greasy equivalent of scoured wool, tops, and wool on skins; and for some metals allowance is made for the metallic content of ores and concentrates exported.

The twenty items, together with the units of quantity and the weights or "quantity multipliers", are given in the following table.

EXPORT PRICE INDEX: COMMODITIES AND WEIGHTING SYSTEM.

(FROM 1ST JULY, 1936.)

Item.	Unit of Quantity.	"Quantity Multipliers", (Weights).	Percentage Distribution of Total Aggregate.			
			Base Period (1936-37 to 1938-39).		1958-59.	
			Excluding Gold.	Including Gold.	Excluding Gold.	Including Gold.

Copper	ton	3,600	0.20	0.20		
Tin	"	1,300	0.31	0.28		
Zinc	"	99,000	2.05	1.90		
Lead	"	208,500	4.10	3.81	8.01	7.70
Meats—						
Beef	lb.	182,000,000	2.56	2.38		
Lamb	"	138,000,000	3.56	3.31		
Mutton	"	44,000,000	0.58	0.54	3.52	3.39
Pork	"	16,000,000	0.43	0.40		
Sugar	ton	305,000	2.58	2.40		
Dried Fruits—						
Sultanas	"	38,200	1.45	1.35	2.11	2.04
Raisins	"	3,000	0.12	0.11		
Currants	"	13,400	0.37	0.35		
Tallow	cwt.	600,000	0.69	0.64	0.72	0.70
Hides—						
Cattle	lb.	28,000,000	0.64	0.59	0.68	0.65
Calf	"	1,800,000	0.08	0.07		
Gold	fine oz.	937,000		6.98		3.66
			100.00	100.00	100.00	100.00

(a) Includes "wheat equivalent" of flour.

The percentage distributions of the "Total Aggregate" shown in the foregoing table are of importance, firstly, as showing their variations from time to time as the result of differential price movements as between the various commodities or groups, and secondly, as regards the effect on the indexes as a whole of the percentage price variations for each commodity or group.

(iii) *Prices.* The adoption of current market prices (as distinct from the former average unit export values) in the present indexes permitted the use of standards for each commodity. All export parities are calculated from price quotations from the most reliable and representative sources available. In most cases, the prices used are those at which current sales are being effected.

(iv) *Index Numbers.* The following table shows export price index numbers for Australia for individual commodities, groups of commodities, and all groups combined for each financial year from 1936-37 to 1958-59 and monthly from July, 1958 to January, 1960.

EXPORT PRICE INDEX: AUSTRALIA.

SIMPLE AGGREGATIVE INDEX: FIXED WEIGHTS.

INDIVIDUAL COMMODITIES, GROUPS OF COMMODITIES, AND ALL GROUPS COMBINED.

(a) Silver, copper, tin, zinc, lead. (b) Beef, lamb, mutton, pork. Guaranteed minimum prices are used when operative. (c) Sultanias, raisins, currants. (d) Cattle hides, calf skins. (e) Preliminary. (f) Nominal. (g) Actual prices realized not yet fully known; provisional series are included in "All Groups" Indexes.

A graph showing index numbers for All Groups (including Gold) appears on page 490.

The group indexes in the table above show the great fluctuations and the wide dispersion of prices of export commodities in recent years. In particular, very great movements upwards and downwards have occurred in the price of wool. Since wool is a predominant export, and comprises 46 per cent. of the base aggregate of the index, fluctuations in wool prices obscure the effect on the "All Groups" Index of movements in prices of the other components. For this reason "Wool" and "All Groups Excluding Wool" are shown separately in the table following. The movement of the weighted average index for "All Groups Excluding Wool" contrasts with the pronounced fluctuations in prices of wool.

EXPORT PRICE INDEX: WOOL AND "OTHER GROUPS", AUSTRALIA.

(Base of each Index: Average of three years ended June, 1939 = 100.)

5. The Changing Weights Index.—This series was designed for shorter period comparisons—from one or more months of the current year to the corresponding months of the previous year. The fixed weights index numbers indicate satisfactorily the general

trend of export prices, but take no account of the relative quantities actually sold at the prices ruling in particular months. The changing weights index numbers, shown below, take account of this factor. In computing these, the "quantity multipliers" are the quantities actually exported (sold, in some cases) in the months (or periods) to which the index numbers relate.

For any given month, the procedure is to multiply the price of each commodity in that month, and its price in the corresponding month of the previous year, by the quantity exported during the given month. A comparison of the resulting aggregates gives one possible measure of the change in prices over the period, i.e., the change assuming that the proportions of the different kinds of exports whose prices are to be measured were the same as their proportions in the given month. Another possible measure is given by assuming that the proportions of the different kinds of exports in the given month were the same as their proportions in the corresponding month of the previous year. Accordingly, the first step in the procedure is repeated, substituting the quantities exported during the corresponding month of the previous year.

The index numbers so obtained have been proved over a period of years to lie very close together. As it is convenient for practical reasons to have one single figure rather than two close alternatives, the two index numbers are multiplied together and the square root of the product is extracted. This is taken to be the index number for the month, the prices of the corresponding month of the previous year being taken as base.

The index numbers for the whole or portion of a year, as compared with the corresponding period of the previous year, are computed in very much the same way. The process involves merely the cumulative addition of the aggregates computed for the individual months, and extraction of the index numbers as explained above.

Index numbers computed on this basis are shown in the following table for the months July, 1958 to January, 1960 and for trade year periods ending in those months:—

EXPORT PRICE INDEX: CHANGING WEIGHTS.

(Base: Corresponding month (or period) of preceding year = 100.)

Month.	Month stated compared with same month of preceding year.		Period of trade year ending in month stated compared with same period of preceding year.

(a) For certain months a nominal price is used for wool as indicated in the preceding two tables.

(b) Preliminary.

Monthly export price index numbers are issued in the mimeographed publication *Monthly Index of Australian Export Prices*, in the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics* and the *Quarterly Summary of Australian Statistics*.

§ 17. External Trade of Australia and other Countries.

1. **Essentials of Comparison.**—Direct comparison of the external trade of any two countries is possible only when the general conditions prevailing therein, and the system of record, are more or less identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance and charges may be added thereto. Again, the values of imports and exports in one may be declared by merchants, whereas in another they may be the official prices fixed from time to time by a commission constituted for the purpose. In later years, moreover, a very substantial difference in the value of imports would result from the different methods of converting the moneys of foreign countries, i.e., from the application of current rates of exchange or of the mint par. Lastly, the figures relating to the external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. This class of trade represents a much greater proportion of the trade of Switzerland and Belgium than that of other countries. France and the United Kingdom also re-export largely, whereas in Canada, Australia and New Zealand the same class of trade represents a comparatively small proportion of the total.

2. **"Special Trade" of Various Countries.**—In the following table the figures, which are expressed in Australian currency, relate as nearly as possible to imports cleared for consumption in the various countries specified and to exports of their domestic products. It is to be noted, however, that these figures do not invariably denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption and, after undergoing some process of manufacture or further modification, are re-exported as domestic production. Nevertheless, a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest. The countries listed below are not necessarily all the important trading countries of the world, but those important countries for which comparable statistics are available.

IMPORTS CLEARED FOR HOME CONSUMPTION, AND EXPORTS OF DOMESTIC PRODUCTS (MERCHANDISE ONLY^(a)): VARIOUS COUNTRIES, 1958.

Country.	Trade. (£A. Million.)			Trade per Head of Population.(£A.)

(a) Includes silver. (b) f.o.b. (c) Covers goods imported less goods re-exported.
(d) Covers goods imported as distinct from goods cleared for home consumption. (e) Year ended June, 1959.

§ 18. Oversea Trade in Calendar Years.

For the purpose of comparison with countries which record overseas trade in calendar years, the following table has been compiled to show Australian imports and exports for each of the calendar years 1955 to 1959.

OVERSEA TRADE IN CALENDAR YEARS: AUSTRALIA.
(£'000.)

Year.	Merchandise.		Bullion and Specie.		Total.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1955	862,547	777,640	2,480	20,320	865,027	797,960
1956	764,597	823,422	3,235	22,236	767,832	845,658
1957	751,543	981,694	2,509	13,891	754,052	995,585
1958	792,891	738,913	2,541	4,083	795,432	742,996
1959(a)	827,653	898,623	2,174	3,339	829,827	901,962

(a) Subject to revision.

§ 19. Excise.

Although excise goods have no immediate bearing on overseas trade, the rate of excise duty is in some cases related to the import duty on similar goods. Moreover, as the Excise Acts are administered by the Department of Customs and Excise, it is convenient to publish here the quantities of Australian produce on which excise duty has been paid. Particulars of Customs and Excise revenue are shown in Chapter XXI.—Public Finance. The following table shows the quantities of spirits, beer, tobacco, etc., on which excise duty was paid in Australia during the years 1957–58 and 1958–59.

QUANTITY OF SPIRITS, BEER, TOBACCO, ETC., ON WHICH EXCISE DUTY WAS PAID: AUSTRALIA.

§ 20. Interstate Trade.

Prior to the federation of the Australian Colonies (now States), each Colony published statistics of its trade with the other Colonies. A similar record was continued by the Commonwealth Government under the provisions of the Constitution (section 93). On the expiry of the "book-keeping" period, these records were discontinued as from 13th September, 1910, and the last published statements were for the year 1909. Later, the

Governments of Western Australia and Tasmania revived the records, and relevant statistics are available again for those States. A detailed collection for Queensland was re-introduced from July, 1953.

At the Conference of Statisticians held in January, 1928, it was resolved that efforts should be made in other States to record the interstate movement of certain principal commodities.

Interstate trade statistics are now published in detail for Queensland, Western Australia and Tasmania, prepared by the Deputy Commonwealth Statisticians in those States. The Deputy Commonwealth Statistician in South Australia publishes some figures for that State, made up from the records of Western Australia and Tasmania. The statistics of interstate trade for New South Wales and Victoria are very meagre. The Melbourne Harbour Trust publishes, in its annual report, the quantities of various commodities of interstate trade loaded and discharged in the Port of Melbourne. The trade with individual States is not disclosed.

§ 21. The Australian Balance of Payments.

1. **Introduction.**—Defining the balance of payments, the International Monetary Fund, in the second edition of its *Balance of Payments Manual* states "[It] . . . is a systematic record of all economic transactions during the period between residents of [a] country and residents of other countries." In a broad sense, therefore, statistics of the balance of payments summarize in money terms the economic relations existing between a national economy and the rest of the world, and are pre-requisite to any attempt to examine the influence of external factors on the domestic economy.

The Australian economy is subject to large fluctuations in the level of export income and is affected in important respects by movements of overseas capital. As a result, balance of payments estimates have always assumed a particular importance in Australia. Between 1948–49 and 1958–59, for example, the value of exports was equivalent to 21 per cent. of national income, fluctuating between 31 per cent. of national income in 1950–51, the year of record wool prices, and 16 per cent. in 1958–59, a year of relatively low wool prices.

Official balance of payments estimates for Australia were first published for the years 1928–29 to 1930–31 as an appendix to Official Year Book No. 24. Prior to that the only estimates published by this Bureau related to the balance of trade, with some reference to international transactions. Since 1930–31, estimates of the balance of payments have been published each year, except during the war period 1939 to 1945. From the first half of the year 1950–51, statistics of the balance of payments have been issued twice yearly in the mimeographed publication *The Australian Balance of Payments*. This publication brings the estimates forward to the end of the most recent financial year or half year and together with a printed volume *The Australian Balance of Payments, 1928–29 to 1951–52* provides also (i) a description of the various items included in the official estimates, (ii) an indication of the sources from which the estimates are derived, and (iii) an explanation of the methods used in making them. The following paragraphs contain a brief description of the concepts adopted and a summary of the transactions for the years 1956–57 to 1958–59.

The form of the Australian balance of payments closely follows the pattern set out by the International Monetary Fund for the presentation of balance of payments statistics, although modifications have been introduced to accord with Australian conditions.

In the definitions adopted by the International Monetary Fund a basic distinction is drawn between "current" transactions and "capital" transactions. Current transactions consist of all transactions involving the transfer of ownership of goods or the rendering of services between residents of one country and residents of another country. Also included are items such as donations, reparations, etc. Capital transactions consist of all transactions involving the transfer of money, claims to money, and titles to investments, between residents of one country and those of another country.

This distinction is maintained in the Australian balance of payments accounts. Thus, transactions involving the transfer of the ownership of goods, i.e., imports and exports, and services, such as freight and insurance, investment income, etc., are included in current account, while predominantly financial transactions are included in capital account.

By definition, and because of the method of constructing the accounts, the balance of payments on current account is always equivalent to the balance on capital account. In practice, however, there are "errors and omissions" in the estimates. These are referred to as the "balancing item". This item includes errors and omissions in the estimates made for all items in both current and capital accounts, short term financing transactions and other timing differences between the statistical recording of items such as imports, exports, transportation items, changes in share ownership, etc. and the crediting and debiting of payments for these transactions against Australia's international reserves.

2. **Current Account.**—The balance of payments on current account is constructed in the form of a series of credit and debit entries, the former comprising all transactions which result in receipts of foreign exchange and the latter all those resulting in payments in foreign exchange.

Within the current account the most important single relationship is the balance of trade—the difference between the value of exports and the value of imports as adjusted for balance of payments purposes. The balance of trade showed surpluses of £260.2 million in 1956–57, £20.4 million in 1957–58 and £13.8 million in 1958–59.

Balance on Current Account	+89.4	–174.2	–206.9

(a) Preliminary. For revised figures see Appendix.

NOTE.—Total marine insurance premiums payable on Australian imports (whether payable in Australia or overseas) were £3.7 million in 1956–57, £4.1 million in 1957–58 and £4.2 million in 1958–59.

When current account invisible transactions are taken into consideration, the trade surplus in 1956-57 was reduced to £89.4 million. In 1957-58 and again in 1958-59, the effect of including current account invisible transactions was to change small surpluses in the trade balance into substantial deficits for all current account transactions—these deficits amounted to £174.2 million in 1957-58 and £206.9 million in 1958-59, respectively.

The most important of these invisible transactions are the transportation items, which appear on both the debit and credit sides of current account. The principal component on the debit side is freight—mainly freight on imports into Australia (£108 million in 1956-57, £119 million in 1957-58 and £114 million in 1958-59)—and on the credit side, expenditure of overseas ships in Australian ports (£63.4 million in 1956-57, £64.2 million in 1957-58 and £70.0 million in 1958-59).

The item next in importance after the transportation items is income from investment. The debit entries under this item include interest, dividends, rents, etc. payable overseas, while the credit entries include similar details of amounts receivable by Australian residents. These items also include undistributed income, for which, since no actual monetary payment occurs, is compensated for by a corresponding entry in capital account showing an increase in the value of overseas or Australian investment respectively. Investment income debits were £113.1 million in 1956-57, £117.7 million in 1957-58 and £143.7 million in 1958-59. Credits in the same periods were £25.8 million, £34.5 million and £24.5 million respectively.

The remaining items are much smaller than the two groups already mentioned. Government transactions debits in these years were in the vicinity of £30-40 million each year and credits about £20 million. Debits on account of donations etc., were about £30 million, with credits of approximately £25 million a year.

One item of some conceptual importance is Australian gold production (less industrial absorption), which constitutes an immediate addition to Australia's reserves of gold and foreign currency. A separate entry is shown as a credit in current account. At the same time exports of gold are excluded from recorded trade figures.

3. Capital Account.—The capital account shows the annual movements in items which are regarded as Australian overseas assets and those which are regarded as Australian overseas liabilities.

On the assets side, by far the most important item is Australia's holdings of monetary gold and foreign exchange, usually referred to as international reserves. These reserves increased by £211.5 million in 1956-57, but decreased by £41.1 million in 1957-58 and by £9 million in 1958-59.

On the liabilities side, the most important items are public authority debt and direct investment in Australian companies.

In recent years loans resulting in net inflows of £3.1 million in 1956-57, £13.2 million in 1957-58 and £2.2 million in 1958-59 have been negotiated with the International Bank.

In 1956-57 official loans other than from the International Bank showed a reduction in total of £33.4 million. This was due mainly to the repatriation to Australia of £32.6 million of the Reserve Bank's holdings of Australian Government securities originally floated in London and taken up by the Note Issue Department of the Bank in 1931. An offsetting entry appears in Item 3. Apart from the International Bank Loan referred to above loan operations overseas resulted in a small outflow in 1957-58. In 1958-59, however, there was a substantial net inflow of £32.6 million from official borrowing operations on the London and New York markets.

In 1958-59 under Item 2 there is an increase of £44.6 million in assets. This shows the effect of arrangements which raised Australia's quota in the International Monetary Fund from \$200 million to \$300 million. A gold payment of £11.2 million was made to the I.M.F. in respect of 25 per cent. of the additional quota and the remaining 75 per cent. is offset in Item 8. Item 8 also includes payment of £6.3 million related to Australia's initial subscription to the I.M.F. and £3.1 million made available to the International Bank for use in its loan operations. In all, these transactions represented transfers in respect of subscriptions of £20.6 million in gold and foreign currency to the I.M.F. and the International Bank during the year.

The inflow, due to direct investment in Australian companies over the period shown was much greater than for official borrowing overseas and showed less variation. Excluding life offices, direct investment in Australian companies amounted to £86.8 million in 1956-57 and £90.1 million in 1957-58. Preliminary details for 1958-59 show a total of £98.7 million for the year. The amounts shown for these years included undistributed income of £44.7 million, £39.7 million and £58.7 million in the three years respectively.

Portfolio investment from overseas amounted to £11.1 million in 1956-57, £7.9 million in 1957-58 and £19.4 million in 1958-59.

As mentioned above, the balance on capital account is identical with the balance on current account, and the movement in international reserves reflects the combined movement of current and capital items. In practice, however, there is an unexplained residue which

is included in the table below as the balancing item. This item includes errors and omissions in the estimates made for all items in both current and capital accounts, short term financing transactions and other timing differences between the statistical recording of items such as imports, exports, transportation items, changes in share ownership, etc. and the crediting and debiting of payments for these transactions against Australia's international reserves. Substantial movements towards the end of the financial year in the pattern of exports and in the rate of portfolio investment in Australian industrial securities suggest that these timing factors might have been of more than usual importance in 1958-59.
